

Northern Ireland Hospital Based Termination of Pregnancy Statistics 2021/22

Published January 2023

Reader Information

Purpose	This publication presents information on the number of hospital admissions where there was a diagnosis of medical abortion and/ or termination of pregnancy in Health and Social Care Trust hospitals in Northern Ireland during 2007/08 to 2021/22. It details information by HSC Trust, Country of Residence and Age Band.
Authors	Jennifer Hillen, Jenny Finlay, Siobhán Morgan
Publication Date	Thursday 19 th January 2023
Reporting Period	1 st April 2021 – 31 st March 2022
Publication Issue	9
Issued By	Hospital Information Branch Information & Analysis Directorate Department of Health Stormont Estate Belfast, BT4 3SQ
Statistician	Jennifer Hillen (028) 90 528452
Email	Jennifer.Hillen@health-ni.gov.uk
Internet Address	https://www.health-ni.gov.uk/articles/termination-pregnancy
Statistical Quality	Information detailed in this release has been provided by HSC Trusts. The HSC Board has issued guidelines which must be adhered to by HSC Trusts to ensure that the information is produced in accordance with UK-wide National Clinical Coding Standards.
Target Audience	DoH, Chief Executives of HSC Trusts in Northern Ireland, health care professionals, academics, general public, media and Health & Social Care stakeholders.

Northern Ireland Termination of Pregnancy Statistics, 2021/22

Key Points

- There were 53 terminations of pregnancy in HSC hospitals in Northern Ireland during 2021/22. This was 10 less than the 63 reported in 2020/21 (Table 1). It should be noted that due to small numbers, relatively large fluctuations may be expected from year to year.
- All of the 53 terminations of pregnancy during 2021/22 were carried out on women normally resident in Northern Ireland (Table 3).
- During 2021/22 there were 36 terminations of pregnancy carried out on women aged 30 years and over, 13 terminations of pregnancy carried out on women aged 25 to 29, and 4 on women aged 24 and under (Table 4).

Tables

The way in which a medical abortion is defined was amended from 1st April 2013, following an update to the National Clinical Coding Standards, which apply across the UK. Definitions currently applicable and those applicable prior to 1st April 2013 are detailed in Appendix 1.

Table 1: Medical abortions and terminations of pregnancy, 2007/08 to 2021/22

Year	Medical Abortion	Termination of Pregnancy
2007/08	76	47
2008/09	71	44
2009/10	64	36
2010/11	73	43
2011/12	56	35
2012/13	75	51
2013/14*	25	23
2014/15	22	16
2015/16	30	16
2016/17	20	13
2017/18	32	12
2018/19	23	8
2019/20	34	22
2020/21	87	63
2021/22	69	53

Termination of pregnancy is a sub-set of medical abortion. Medical abortion figures above include readmissions to hospital for treatment of retained products of conception following a termination of pregnancy with the initial termination of pregnancy not necessarily carried out in Northern Ireland. Terminations of pregnancy not commenced in Northern Ireland are not included in the Termination of Pregnancy figures.

*Prior to 1st April 2013 (see previous publications) Medical Abortion figures included re-admissions with retained products of conception, following a missed miscarriage or a spontaneous abortion that had been treated in the first admission with an evacuation of the products of conception. These are no longer part of the definition of medical abortion.

Furthermore, retained products of conception in the same episode as the termination that required surgical treatment are considered a complete termination of pregnancy.

Table 2: Terminations of pregnancy by HSC Trust of treatment, 2007/08 to 2021/22

Year	Belfast	Northern	South Eastern	Southern	Western
2007/08	18	12	12	*	*
2008/09	13	*	16	*	*
2009/10	*	*	12	*	*
2010/11	14	12	*	*	*
2011/12	15	*	13	*	*

England and Wales

On 29 June 2017 it was announced that the UK government would fund abortion services accessed in England and Wales by women who reside in Northern Ireland. Prior to this, women from Northern Ireland could access abortions in the UK but would have to fund the procedure privately.

Following this announcement, there was a large increase in the number of women travelling from Northern Ireland to England and Wales for services in 2018. However, these figures have since decreased by 84% from 1,014 in 2019 to 161 in 2021 following the change in legislation in Northern Ireland. Within this, the number of privately funded terminations fell from 30 (3.0%) in 2019 to 15 (9.3%) in 2021.

Further context to the decline in women travelling to England and Wales in 2021 can be found in section 'Northern Ireland' below, considering recent changes to Northern Ireland legislation.

Further information on these figures may be accessed in the 'Abortion statistics, England and Wales: 2021' publication:

<https://www.gov.uk/government/statistics/abortion-statistics-for-england-and-wales-2021>

Scotland

On 6 November 2017 the Scottish Parliament also announced that the NHS in Scotland would provide termination services free of charge to women who reside in Northern Ireland. However, they have reported that this made very little impact on the number of abortion services accessed in Scotland by Northern Ireland residents. Since 2011, the NHS in Scotland dealt with 17 terminations to women from Northern Ireland. It is noted that women from Northern Ireland rarely use the provision of termination services in Scotland.

Further information can be found at:

<https://beta.isdscotland.org/topics/sexual-health/termination-of-pregnancy/>

Northern Ireland

On 22 October 2019 abortion in Northern Ireland was decriminalised, although legislation was not passed until 31 March 2020. Over this time frame and continuing is the funded provision for patients to travel to Scotland, England and Wales for treatment. The data contained within this report present figures for the period after legislation was passed. However, only considered are those terminations carried out in HSC Hospitals in Northern Ireland as an inpatient or day case, in line with the definitions and scope of previous iterations of this publication. As there is currently no framework in place to report on *all* Terminations of Pregnancy carried out in Northern Ireland at time of publishing, we will continue to monitor and report future changes.

Appendix 1 – Definitions

The way in which a medical abortion is defined was amended for activity from 1st April 2013, following an update to the National Clinical Coding Standards on termination of pregnancy.

The National Clinical Coding Standards ICD-10 4th Edition reference book provides specific national clinical coding standards to reduce ambiguity and differences in any interpretation. It incorporates all changes notified in the National Clinical Coding Standards ICD-10 4th Edition Addendum 2013. This was published in August 2013 following a public consultation on the changes (carried out by the Health and Social Care Information Centre, England), which closed in January 2013.

Current definitions, applicable throughout the UK from 1st April 2013.

All HSC Trusts in Northern Ireland have confirmed that the below definitions have been applied from 1st April 2013 in the identification of medical abortions and terminations of pregnancy.

Medical Abortion

Within the confines of ICD-10 code O04, this refers to the interruption of a live pregnancy for legally acceptable, medically approved indications. It also includes readmission with retained products of conception following a previous medical termination of pregnancy, not necessarily carried out in Northern Ireland.

Termination of pregnancy (medical)

These are defined as any patient who has a live pregnancy terminated for indications that are legally acceptable and medically approved in Northern Ireland. Medical termination of pregnancy is a subset of medical abortion.

Definitions applicable throughout the UK prior to 1st April 2013.

All HSC Trusts used the below definitions to identify medical abortions and terminations of pregnancy during the period 2007/08 to 2012/13.

Medical Abortion

Within the confines of ICD-10 code O04, this refers to the interruption of a live pregnancy for legally acceptable, medically approved conditions. It also includes readmissions with retained products of conception following a previous termination of pregnancy, a missed miscarriage or a spontaneous abortion that had been treated in the first admission with an evacuation of the products of conception and a patient who had a termination of pregnancy and had retained products of conception in the same episode that required surgical treatment.

Termination of pregnancy (medical)

This is defined as any patient who has a live pregnancy terminated for indications that are legally acceptable and medically approved in Northern Ireland. Medical termination of pregnancy is a subset of medical abortion.

Summary of definitional changes from 1st April 2013

Readmissions with retained products of conception following a missed miscarriage or a spontaneous abortion that had been treated in the first admission with an evacuation of the products of conception are no longer part of the definition of medical abortion.

Retained products of conception in the same episode as the termination that required surgical treatment are now considered a complete termination of pregnancy.
