

WEEK ENDING

4th September 2017 - **FINAL WEEK**

Site	Activity report	Current status:
Ballymena	Medium risk: Noteable increase in <i>Rhopalosiphum padi</i> (Bird-cherry oat aphid) activity consistent with other trapping methods. Virus transmission risk should be minimal due to mature plant resistance at this stage.	
Ballymoney	Low risk: No aphids of significance recorded during this period	
Killeel	Low risk: No aphids recorded during this period	
Loughgall	Low risk: No aphids of significance recorded during this period	
Rathfriland	Low risk: 1 <i>Rhopalosiphum padi</i> (Bird-cherry oat aphid) and 1 <i>Macrosiphum euphorbiae</i> (Potato aphid) recorded during this period. For future reference, small number of apterous (wingless) <i>Macrosiphum euphorbiae</i> (Potato aphids) present at this site with probable crop colonisation underway.	
Strabane	Low risk: 1 <i>Rhopalosiphum padi</i> (Bird-cherry oat aphid) recorded during this period.	

Key	LOW RISK	Low virus vector activity, no action required
	MODERATE RISK	Increased vigilance and monitoring of aphid populations required
	HIGH RISK	Severe risk of PVY transmission by aphids
	NO SAMPLE	No sample received for this location
