

Northern Ireland Composite Economic Index

Quarter 3 2018

Key points

- The Northern Ireland Composite Economic Index (NICEI) results show that NI economic activity was estimated to have increased by 0.4% in real terms from Quarter 2 (April – June) 2018 to Quarter 3 (July – September) 2018. The index increased by 2.1% over the year to Quarter 3 2018.
- Over the last two years annual output (averaged over the four quarters to Quarter 3 2018 compared to the previous four quarters) increased by 0.5%. Although the measures are not produced on a fully equivalent basis, comparisons with the UK over the same period show that the NICEI grew at a slower rate (0.5%) than UK GDP¹ (1.5%). In the UK quarterly (0.6%) growth was slightly higher but annual (1.5%) growth was lower than that recorded for NI (0.4% and 2.1% respectively).
- The NI private sector index was estimated to have increased by 0.6% over the quarter and by 2.5% over the year to Quarter 3 2018.
- The Public sector jobs index decreased by 0.2% over the quarter but increased by 0.6% over the year to Quarter 3 2018.

8. [Annex 1: Index Tables](#)

Note that the data in this release can be downloaded in excel by clicking the button under the respective tables/charts. In addition, the summary tables and comparisons with the UK, Ireland and Scottish GDP can be downloaded in Open Data Format from the [NINIS website](#).

The next publication for Quarter 4 2018 results will be in April 2019.

1 Context

The results for the NICEI for Quarter 3 2018 show that economic output in Northern Ireland (NI) increased by 0.4% over the quarter (short-term) and by 2.1% over the year to Quarter 3 2018 (medium term). Over the last two years annual output (averaged over the four quarters to Quarter 3 2018 compared to the previous four quarters) increased by 0.5%.

The most recent [Quarterly Employment Survey](#) (published December 2018) shows that the number of employee jobs increased over the quarter by 0.3 % (2,240 jobs) and over the year to September 2018 by 2.0% (14,700 jobs).

The most recent [NI House Price Index](#) showed that between Q2 2018 and Q3 2018 property prices in NI increased by 2.3%. The index increased over the year by 4.8%. Whilst the NI Courts and Tribunals Service reported the lowest number of mortgage cases received² for the July to September quarter since the time series began in 2007³.

As reported in previous bulletins, the NICEI is designated as an experimental index to reflect its status as a measure under development. Users should take this into account when interpreting results. Ongoing areas of development are highlighted below:

- The Public Sector jobs index of the NICEI is based on public sector jobs. This may be unduly impacted by the fact that the NI Civil Service underwent a period of strategic reorganisation in the form of a Voluntary Exit Scheme (VES) which sought to reduce the number of such jobs. For example, a ten percent reduction in public sector jobs may not equate to an equivalent fall in public sector output. NISRA is continuing to investigate how to improve the measure of public sector output as part of planned improvements to the NICEI series. This includes the assessment of various output measures for different public sector functions and analysis of public sector expenditure data and appropriate deflators.
- The Index of Construction component of the NICEI covers the output of construction firms' activity in Northern Ireland only. There is evidence to suggest that since the downturn many NI construction firms have been sending employees to work in projects based outside NI. NISRA is currently investigating the feasibility of including the value of such work in the construction index.

² i.e. writs and originating summonses issued, which commence the legal process for an order of possession for property.

³ [NI Courts and Tribunals Service – Mortgages: Actions for Possession bulletin July to September 2018](#)

2 NI Composite Economic Index

Quarter 3 (July to September) 2018

The NICEI is an experimental quarterly measure of the performance of the NI economy based on available official statistics. Existing published quarterly indices (i.e. Index of Services (IOS), Index of Production (IOP), Quarterly Construction Enquiry (QCE), and public sector employee jobs data from the Quarterly Employment Survey (QES), plus unpublished agricultural output data from the Department of Agriculture, Environment and Rural Affairs (DAERA)) are weighted using ONS Regional Accounts Gross Value Added (GVA) data to provide a proxy measure of total economic output in the NI economy on a quarterly basis.

Key results (by private and public sector indices)

NI economic activity is estimated to have

- Increased by 0.4% in real terms from Quarter 2 2018 to Quarter 3 2018; and
- Increased by 2.1% over the year.

Private sector output

- Increased by 0.6% in real terms over the quarter; and
- Increased by 2.5% compared to the same quarter one year ago.

The Public sector jobs index

- Decreased by 0.2% compared to Quarter 2 2018; and
- Increased by 0.6% over the year.

On a slightly longer timeframe, the NICEI results show that annual output, averaged over the four quarters to Quarter 3 2018 compared to the previous four quarters, increased by 0.5%. For the same period:

- the Private sector index increased by 0.6%; and
- the Public sector jobs index increased by 0.4%.

Table 1 provides a summary of changes over the quarter, year and rolling four quarters for the NICEI and its private and public sector jobs sub-indices.

Table 1: Overview of performance of Northern Ireland Economy, Quarter 3 2018

	Change on quarter	Change on year	Rolling annual average change ⁴
NICEI	0.4%	2.1%	0.5%
NI Private Sector	0.6%	2.5%	0.6%
NI Public Sector jobs	-0.2%	0.6%	0.4%

⁴ Most recent four quarters compared to previous four quarters

3 Contribution to change

Those industries that represent a larger proportion of the economy and/or which have large quarterly changes will have the most impact on the overall NICEI results. This is particularly the case when dealing with short term change over the quarter as results in the individual inputs (services, production and construction) can be volatile. The contribution different industries make to the overall change in the NICEI is calculated by multiplying their quarterly change by the proportion of the economy they represent.

Change over the quarter (short-term)

Latest results show that over the quarter to Quarter 3 (July - September) 2018:

- NI economic activity increased by 0.4%;
- the Private sector index increased by 0.6%; and
- the index for the Public sector jobs decreased by 0.2%.

The change (0.4%) in the NICEI over the latest quarter was driven by increases in:

- the Production sector (a contribution of 0.4 percentage points (pps));
- the Construction sector (a contribution of 0.4pps);

These increases were partially offset by a decrease in:

- the Services sector (a negative contribution of 0.3 percentage points pps);

The changes in each of these individual series can be found in Table 2 at the end of this document.

Figure 2: Contributions of component indices to quarterly change in the NICEI Q3 2018⁵

Percentage Points

⁵ Please note figures may not sum due to rounding

Change over the year (medium-term)

The NICEI results show that over the year (Quarter 3 2017 to Quarter 3 2018):

- NI economic activity increased by 2.1%;
- the Private sector index increased by 2.5%; and
- the index for the Public sector jobs increased by 0.6%.

The increase in the NICEI over the year (2.1%) was driven by increases in:

- the Production sector (a contribution of 1.0pps);
- the Services sector (a contribution of 0.7pps);
- The Construction Sector (a contribution of 0.1pps); and
- The Public Sector (a contribution of 0.1pps);

Figure 3: Contributions of component indices to annual change in the NICEI Q3 2018⁶

Rolling annual average change

Looking at longer term trends, results for annual output (averaged over the four quarters to Quarter 3 2018) compared to the average of the previous four quarters show:

- NI economic activity increased by 0.5%;
- the Private sector index increased by 0.6%; and
- the index for the Public sector jobs increased by 0.4%.

The NICEI over this period was driven by a combination of increases in:

- the Services sector (a contribution of 0.8 pps); and
- the Public sector (a contribution of 0.1 pps);

These increases were partially offset by decreases in:

- the Production sector (a negative contribution of 0.2pps); and
- the Construction sector (a negative contribution of 0.2pps).

⁶ Please note figures may not sum due to rounding

Figure 4: Contributions of component indices to rolling annual average change in the NICEI, Q3 2018

[Download in excel](#)

4 Comparison with measures of GDP

The NICEI is not equivalent to the Office for National Statistics (ONS) quarterly measure of change in Gross Domestic Product (GDP) for the whole UK economy. This is because the ONS measure is based on a broader range of sources including output, income and expenditure estimates of economic activity, whereas the NICEI is based on output and employee jobs data. However, when applied to the equivalent UK data sources, the NICEI methodology has been shown to provide a close short term approximation to the UK GDP series (see [NICEI Methodology Paper](#)).

Although the measures are not produced on a fully equivalent basis, comparisons with the UK show that NI output increased by 0.4% over the quarter, whilst UK GDP increased by 0.6% over the quarter. The UK economy grew by 1.5% over the year to Quarter 3 2018, meanwhile NI output over the same period increased by 2.1%.

When the extent of change is considered over the last two years, that is average growth for the four quarters to Quarter 3 2018 compared to the previous four Quarters, the NI growth rate increased by 0.5% whilst the UK growth rate was 1.5% over the same period.

The UK has reported GDP growth in each of the last 23 quarters, whereas the NICEI has reported growth in 17 of the last 23 quarters. The NICEI is currently 4.6% below the maximum value recorded in Quarter 2 2007. Meanwhile in Quarter 3 2018, UK GDP is estimated to be 11.8% higher than its pre-economic downturn peak of Quarter 1 2008. This suggests that the UK has had a shorter downturn with a faster recovery.

The most recent results for Scotland show that GDP⁷ grew by 0.3% over the most recent quarter and by 1.5% over the year to Quarter 3 2018. The average growth for the four quarters to Quarter 3 2018 compared to the previous four quarters was 1.5%.

Looking at Ireland's (IE) Quarterly National Accounts⁸, growth in GDP increased by 0.9% over the quarter to Quarter 3 2018. Over the year to Quarter 3 2018 GDP increased by 4.9%, with an average annual growth of 7.2% (latest four quarters compared to the previous four quarters).

Please note that a table showing a comparison of the NI Composite Economic Index and GDP for the UK, Scotland and Ireland can be found in the downloadable tables on the [NISRA](#) website.

⁷ [Scottish Government Quarterly National Accounts, Quarter 3 2018](#)

⁸ [CSO Quarterly National Accounts, Quarter 3 2018](#) (The measure of GDP referred to is the chained volume index at constant market prices, seasonally adjusted)

5 Economic commentary

The results for the NICEI for Quarter 3 2018 show that economic output in Northern Ireland (NI) has increased over the quarter (short-term) by 0.4% and by 2.1% over the year to Quarter 3 2018 (medium term). The Production and Construction sectors made a positive contribution to the increase in the NICEI over the quarter to Quarter 3 2018.

Longer term trends can be analysed by comparing the change in the average for the most recent four quarters (to Quarter 3 2018) with the average of the previous four quarters (to Quarter 3 2017). The result is less affected by short-term fluctuations, although this is a less sensitive measure of short term change.

When looking at this annualised trend over the last three years there is evidence that the rate of growth has slowed. Annualised average growth over the last four quarters to Quarter 3 2018 compared to the previous four quarters increased by 0.5%. This compares with annual growth over the previous two year period (to Quarter 3 2017), which was 1.6%.

Considering the extent of change over the last two years, average annualised GDP growth for the four quarters to Quarter 3 2018 for the UK was 1.5% compared to the previous four quarters. As stated above, the NI growth rate in the NICEI was 0.5% over the same period.

Although the sources are not fully comparable, recent results show that on an annual basis (comparing Q3 2018 with Q3 2017) the NI economy was growing at a faster pace than the UK. Annual growth was 2.1% in NI compared with 1.5 in the UK (medium-term). However, on a quarterly basis (comparing Q3 2018 with Q2 2018) growth in NI output was slightly slower (0.4% for NI versus 0.6% for UK GDP).

The most recent [Labour Force Survey](#) results reported that the NI seasonally adjusted unemployment rate for the period August-October 2018 was 3.9%, a decrease of 0.1 pps over the quarter and the year⁹.

In addition, over the period, the employment rate (68.7%) decreased by 0.7 pps over the quarter and increased by 0.6 pps over the year¹⁰. Meanwhile the economic inactivity rate (28.5%) increased by 0.8 pps over the quarter and decreased by 0.5 pps over the year¹¹.

The [Quarterly Employment Survey](#), shows that employee jobs increased over both the quarter and the year to a high of 765,880 in September 2018 in the seasonally adjusted series¹².

An overview of the NICEI time series alongside an economic timeline of key world, European, UK and NI events to help place the performance of the NICEI into context is provided overleaf.

⁹ The LFS report stated neither the annual nor quarterly changes identified were statistically significant, i.e. the recorded changes did not exceed the variability expected from a sample survey of this size and are, therefore, not likely to reflect a real change.

¹⁰ As above.

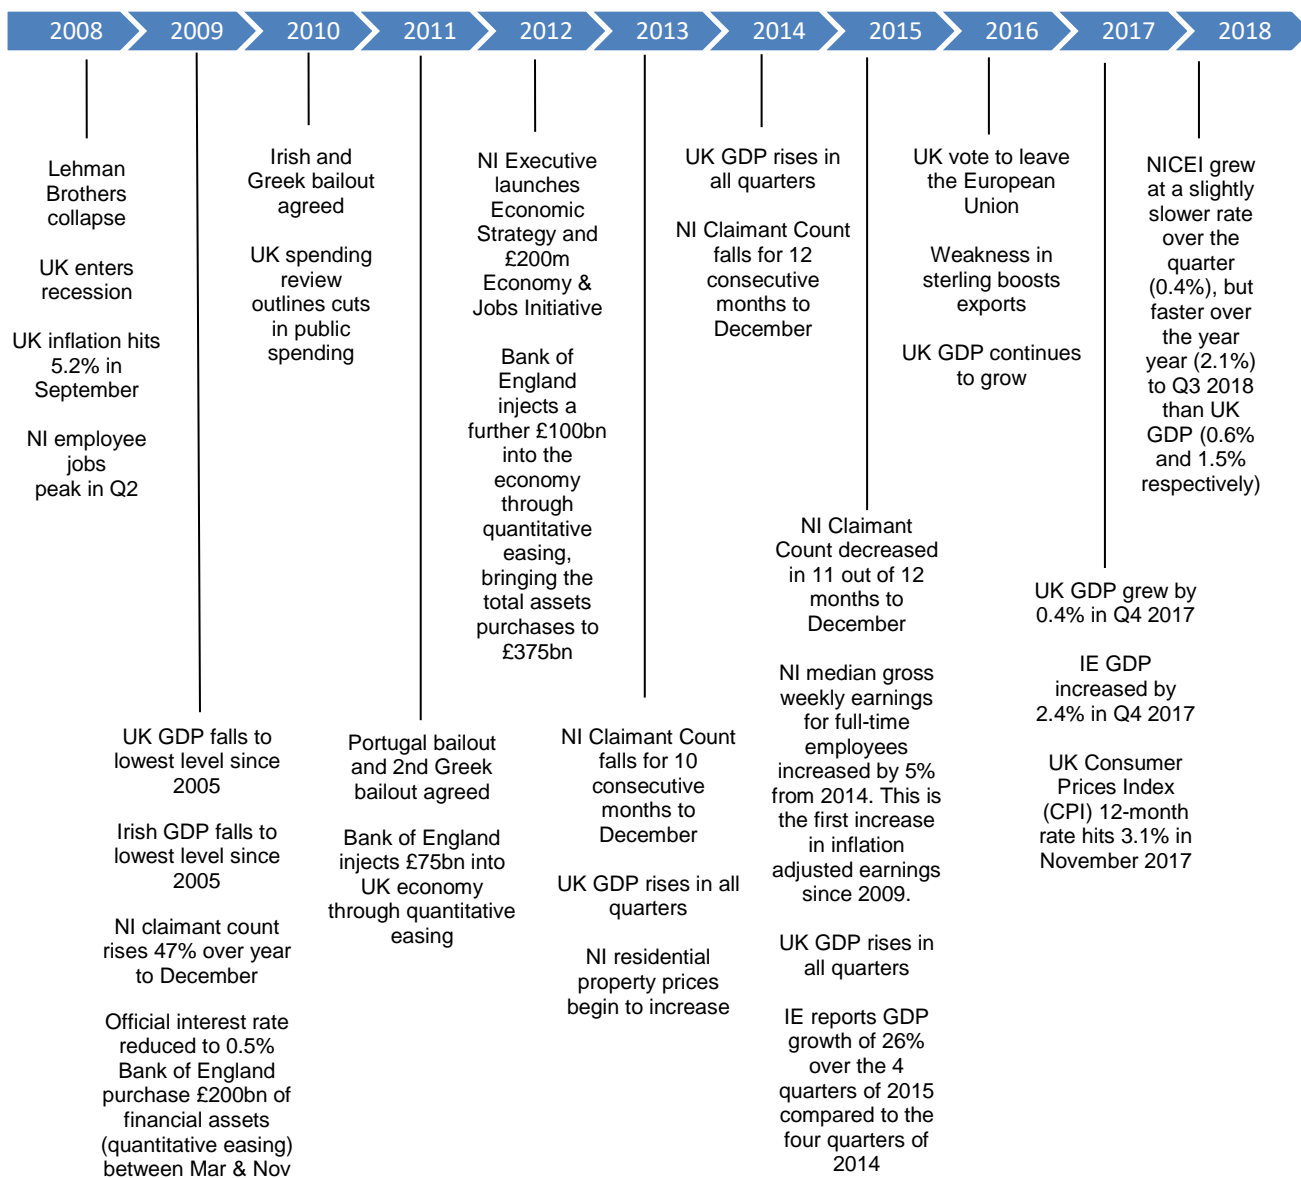

¹¹ As above.

¹² The QES report stated the annual change in employee jobs was significant, i.e. the recorded change exceeded the variability expected from a survey of this size and was likely to reflect real change.

Figure 5: Overview of the performance of the NICEI alongside a timeline of key economic events, 2008-18

Further information on the state of the Northern Ireland economy, setting it in context with the UK and Ireland can be found in the latest Department for the Economy (DfE) [Economic Commentary](#).

6 Draft Programme for Government

The annual Private Sector NI Composite Economic Index, has been selected as an indicator in the draft Programme for Government (PfG) Framework and NICS Outcome Delivery Plan 2018/19. It is used alongside a number of other indicators to inform progress against Outcome 1, prospering through a strong, competitive, regionally balanced economy.

To that end, Figure 6 (below) shows the performance of the NI annual private sector, against the PfG baseline year (2015). It can be seen that the index increased by 0.9% in 2017, continuing the upward trend in annual private sector growth since 2014 (1.5% in 2014, 2.5% in 2015 and 2.6% in 2016).

Figure 6: Annual Private Sector NI Composite Economic Index

[Download in excel](#)

The next annual update will be available following the NICEI publication (for Quarter 4 2018) which will be released in April 2019. More information on the draft Programme for Government framework and the NICS Outcome Delivery Plan is available on the [NISRA website](#).

7 Further Information

Coverage

Together the existing IOS, IOP and QCE indices cover their respective elements of the private sector economy. Output data currently provided by Department of Agriculture, Environment and Rural Affairs (DAERA) is unpublished and as such we are not able to disclose this data. No appropriate output data for the Public sector is collected in Northern Ireland and as a best available proxy public sector employment from the Quarterly Employment Survey (QES) was used, as recommended by the Office for National Statistics (ONS).

Further information on the main input data is presented below:

IOP: The quarterly NI Index of Production (IOP) is currently based on a sample of around 1,100 businesses out of a population of c. 5,000. This covers approximately 93% of the turnover of the population at the time of selection and a response rate of around 85%. This includes a census of all companies employing 40 or more employees as well as those employing 0 to 39 employees and having a turnover of £10 million or more. The new sample has been designed to have a minimum precision of 10% for each of the production subsectors.

IOS: The quarterly NI Index of Services (IOS) is currently based on a sample of around 3,400 businesses out of a population of c. 39,000. The sample consists of a census of dominant companies and a Neyman stratified random sample of the remaining companies and covers approximately 70% of turnover. The census element consists of all companies employing 100 or more employees as well as those employing 0 to 99 employees and having a turnover of £10 million or more.

QCE: From a sampling universe of approximately 10,000 firms, a disproportionate sample of 700 construction firms is randomly selected to take part in the NI Quarterly Construction Enquiry (QCE). The sample is disproportionately stratified (into six strata) using Inter Departmental Business Register (IDBR) turnover as the stratification variable. This includes a census of all companies with a turnover of £5.25m or greater. Further information on the QCE sample coverage and methodology can be found [here](#).

QES: The Quarterly Employment Survey (QES) provides short-term employee jobs estimates for Northern Ireland. It has a sample size of approximately 6,000 and covers all private sector firms with 25 or more employees, all public sector employers and a representative sample of smaller firms.

The QES excludes the self-employed, HM Armed Forces, private domestic servants, homeworkers and training for success trainees without a contract of employment (non-employed status). The number of jobs are counted rather than the number of persons with jobs. For example, a person holding both a full-time job and part-time job, or someone with two part-time jobs, will be counted twice.

Weighting and Combining the Data

The output series were produced as weighted aggregates of the above input series, where the weights were based on the new “Balanced estimate¹³” of Gross Value Added (GVA)¹⁴ by industry obtained for Northern Ireland from Regional Accounts produced by ONS.

¹³ [ONS Regional Gross Value Added \(Balanced\)](#), UK: 1998 to 2017

¹⁴ Please note that a glossary of national accounts terms and definitions can be found [here](#).

Please note that the latest available GVA by industry published in December 2018 includes provisional figures for 2017. The NICEI calculations are based on GVA balanced figures up to and including the 2017 year.

Annual Chain-Linking

Annual chain-linking was used to combine the private Services, Production, Construction and Agriculture sectors to produce an index for the Private sector, which was then combined with the index for the Public sector to give an overall index for the economy. Use of annual chain-linking is standard National Accounts practice.

Seasonal Adjustment of the Indices

The indirect method of seasonal adjustment was employed. Seasonally adjusted figures were input (where possible) and when the combined output series were tested for seasonality there was no residual seasonality found, therefore no seasonal adjustment was required.

Base and reference year

As part of the Blue Book process (UK National Accounts), and in line with Eurostat guidance, the base year and reference year for chained volume estimates are moved forward by one year so that the estimates better reflect the industrial structures and prices currently seen within the economy. Re-referencing on its own does not cause revisions to real growth rates, but the rebasing process, taking on as it does new Gross Value Added and product weights from the supply and use balancing process, will cause revisions to the growth rates of chained volume components.

Public Sector Employees

The public sector employee jobs figures used in our analysis are sourced from the Office for National Statistics who compile the figures to produce their [Public Sector Employment publications](#). The public sector comprises central government, local government and public corporations as defined for the UK National Accounts.
