Note on the analysis of results

The YPBAS data has been weighted by year group, gender and religion to compensate for non-response bias among these subgroups.

The following tables of top-line results show the weighted frequencies of responses and associated percentages. Survey findings are reported as a percentage of the total number of respondents who provided a response to that particular question. This means that the valid total number of respondents will vary from one question to another. Also, frequencies of responses may not sum exactly to the valid total shown in some tables, due to the rounding effects of weighting.

For questions, which were not routed to particular respondents, survey findings are reported as system missing.

In order to meet clients' increasing demands for more questions and modules on this popular survey, the steering group agreed that the questionnaire would be split into two versions, A and B. Some questions have been asked in both versions of the questionnaire, e.g. demographics and long term conditions. Thus, top-line results have been presented as follows: questions common to both version A and B, questions pertaining solely to version A and questions pertaining solely to version B.

QUESTIONS IN BOTH VERSIONS A & B
