APPENDIX 3B WRITTEN COMMUNICATION

Since the quashing of the Orders in April 2013 (see Chapter 1 for details) there has been a series of written communications issued to landowners along the Proposed Scheme corridor to keep them appraised of scheme updates. The bullets below outline the timeline and details of the written communications with landowners;

- **Sept 2011** – Scheme Update letter advising of; activities over the forthcoming months, timing of the Inspectors Report, Departmental Statement Letter issued to all fee-simple type interests in the vesting order as well as agents and solicitors advising of the anticipated activities. This included the wish to meet affected landowners to discuss the effects on the land including access arrangements and accommodation works. It also referred to the possibility of dropping lands from the vesting order and agreeing use of temporary lands for essential works should the scheme progress as well as potential future surveys.

- **August 2012** – Compensation Clarification Letter issued to all landowners within the Vesting Order, outlining procedures for claiming compensation for vested lands along the A5 Western Transport Corridor.

- **Sept 2012** – Legal Challenge Update Letter 1 issued to all landowners within the Vesting Order, confirming that the Alternative A5 Alliance has brought a challenge in the High Court to the Department's decision to proceed with the scheme.

- **Sept 2012** – Legal Challenge Update Letter 2. Issued to all landowners within the Vesting Order, confirming that the Vesting Orders became operative on 11 September 2012, bringing all the vested lands into the Department's ownership. However, in light of the legal challenge, the Department would be delaying progression to the construction phase of the works, to allow time for the legal challenge to proceed through the preliminary court proceedings. Letter advised that in the meantime, the Department would be carrying out preliminary works on the vested land, such as ground investigation, service diversions and archaeology surveys. In the event of the Vesting Orders being quashed by a future court ruling, any legal claim for compensation for the Department's occupation of any lands would be paid accordingly.

- **Oct 2012** – Legal Challenge Update Letter 3. Further update, issued to all landowners within the Vesting Order, confirming that the Department intended to proceed with the works which may include fencing off the vested lands, archaeology surveys, ground investigation, ecology works, service diversions, and site clearance. Works programmed to commence on 29th October 2012.

- **Jan 2013** – Legal Challenge Update Letter 4. Further update issued to all landowners within the Vesting Order. Application by the Alternative A5 Alliance to suspend the Vesting

© Mouchel 2016

Orders and planned preliminary works, in advance of the February 2013 substantive court hearing, was heard on 17th December 2012. After considering evidence and hearing submissions from both parties the presiding judge decided not to grant an injunction. This decision recognised an undertaking given by the Department to carry out no further ecology works that require licensing (i.e. any further mitigation works in respect of bat and badger habitats) although monitoring of completed works to comply with licensing would be continued.

- **April 2013** – Legal Challenge Update Letter 5. Confirmation of the quashing of the Orders for the A5 scheme. The effect of this judgement is that, as of 15th April, the ownership of lands will be returned to the landowners. In light of this judgement the Department has given a commitment that it will cease all works and will not carry out any further works unless requested to do so by landowners. The Department has instructed its contractors accordingly. In making his decision the Judge upheld one ground of challenge which related to the need to carry out an Appropriate Assessment under the Habitats Directive, associated with the River Foyle and tributaries and the River Finn Special Areas of Conservation. An Appropriate Assessment will be carried out and work on this has commenced. A summary of the reinstatement options were outlined.

- **May 2013** – Legal Challenge Update Letter 6. Orders for the A5WTC scheme were quashed and the ownership of the lands has been returned to all the landowners. Also, clarification that advance payment of 90% of the compensation monies will not be paid.

- A**ugust 2013** – Letter to indicate that a review of the Agricultural Impact Assessments (AIA's) will be carried out. Request to provide updated information for the AIAs.

- **November 2013** – Further letter to request any updated information for the AIA's

- April 2014 – Scheme Update letter issued covering: Programme and legal challenge update, Landtake, Agricultural Impact Assessments (where applicable), the way Forward – Proposed Meetings.

- **July 2014** – Scheme Update Letter covering the Landownership Confirmation Meetings and where applicable, the alternative issue of packs, forthcoming Engineering Meetings to discuss landtake, confirmation of access arrangements and accommodation works, confirmation of agreements reached at the 2011 Public Inquiry, or the Inspector's recommendations and clarification of scheme phases and Agricultural Impact Assessments (where applicable).

APPENDIX 10A NORTHERN IRELAND LANDSCAPE CHARACTER CLASSIFICATION

The landscape of the majority of the Proposed Scheme corridor has been documented as part of the Landscape Character Classification for Northern Ireland (2000), produced on behalf of the Northern Ireland Environment Agency.

The area of classification relative to the Proposed Scheme corridor is illustrated in Volume 2 Fig 10.2, of which twelve sub-regional Landscape Character Areas (LCA's) have been identified as being of direct relevance to the study area:

- Derry Slopes (No. 32);
- Foyle Valley (No.27);
- Burngibbagh & Drumahoe (No.31);
- Sperrin Mountains (No.29);
- Derg Valley (No.20);
- Bessy Bell & Gortin (No.26);
- Omagh Farmland (No.22);
- Slievemore (No.44);
- Brougher Mountain (No.16);
- Dungannon Drumlins and Hill (No.45);
- Clogher Valley Lowlands (No.17); and
- Blackwater Valley (No.46)

The relationship of these LCA's with the various Landscape Character Zones (LCZ's) and Sub-Zones (LCSZ's) defined within the study area (see Appendix 10D) is shown in Table 10B -1. The key elements of each LCA are listed and summarised in Table 10B -2.

Table 10A -2 Landscape Character Summary Information

LCA Boundary	Typical Descriptors
	**Derry Slopes (No.32)** • Smooth rounded hill tops with undulating lower slopes. • Steep slopes of River Foyle to east; broad, shallow vale of Upper Skeoge River leading to the Republic border to west • Broad geometric patchwork of fields disrupted by extensive built development • Bands of broadleaf woodland on the banks of the Foyle
	**Foyle Valley (No.27)** • Broad, accessible valley on the western slopes of the Sperrin Hills • Deeply incised river channel and river terraces between Victoria Bridge and Newtownstewart • Sperrin Hills situated to the east with scenic, steep wooded tributary glens • Farmland has strong, geometric field pattern, which continues onto the slopes of the adjacent higher land • Roads follow terraces on outer edge of valley floor or on lower valley slopes. • Attractive stone bridges
	**Burngibbagh & Drumahoe (No.31)** • Linear valley running along a NE-SW alignment. • Valley has a flat floor and is enclosed by broad, rounded ridges. • Hedgerows enclose pastures and form strong, geometric field patterns on the hill slopes, with small areas of open moorland capping some summits. • Pylons are an intrusive landscape element, particularly to the north. • Built development concentrated in centre of valley, near Drumahoe on the fringe of Londonderry.

© Mouchel 2016

LCA Boundary	Typical Descriptors
	**Sperrin Mountains (No.29)** • Broad, rounded ridges with rocky outcrops leading to steep, pointed summits. • Deep, branching gullies and open, fast-flowing moorland streams. • Extensive open moorland pasture and heather with bog/ areas of damp grassland across lower slopes. • Earthbanks and stone walls follow historic townland boundaries on lower slopes; some pastures are neglected and populated by scrub and rushes. • Mixture of winding moorland roads and straight tracks • Broadleaf woodland concentrated within lower valleys, some conifer woodland on mountain slopes. Isolated barns on upper slopes and farmsteads in valleys.
	**Derg Valley (No.20)** • Pasture on gently rolling lower valley slopes and across river floodplain. • Meandering river, sometimes enclosed by levees. • Extensive patches of peaty marsh and scrubby fen woodland at confluences with minor streams. • Areas with small, poorly-drained fields are often juxtaposed against larger, rolling pastures; fields enclosed by both stone walls and hedgerows. • Straight, embanked roads and stone bridges on floodplain, winding, narrow lanes on lower valley slopes; • Farms and cottages scattered along roads; larger settlements concentrated at principal bridge crossings.
	**Bessy Bell & Gortin (No.26)** • Scenic landscape on the western fringes of the Sperrin Hills; higher summit of Mullaghcarn to east and rounded moorland summit of Bessy Bell to west. • River Strule flows within an incised, wooded valley, with roads tracing river course alongside. • Diverse landscape pattern with a transition from steep, wooded river banks to farmland to open moorland within relatively short distances. • Hedgerows, becoming gappy, with wire fencing and stone walls across higher ground. • Relatively dense tree cover, with numerous hedgerow trees and small copses; landscape becomes more exposed on elevated slopes. • Scenic views from hill slopes and along valley.

© Mouchel 2016

LCA Boundary	Typical Descriptors
	**Omagh Farmland (No.22)** • Lowland drumlin landscape of deeply undulating terrain with rounded slopes. • Numerous small, winding streams, with peaty marsh on some floodplains and occasional small loughs. • Predominant small-scale field pattern, with fields forming an even, geometric patchwork over the drumlins but becoming irregular in shape on the flatter land in between; broader more open field pattern near Omagh. • Dense hedgerow margins and small deciduous woodlands; wire fencing often apparent. • Numerous farms, typically sited on drumlin slopes; many small villages and settlements, typically clustered at road junctions. • Principal routes tend to be straight and deeply undulating, embanked in sections across marshy floodplains. Minor roads are tortuous.
	**Slievemore (No.44)** • Broad, rounded sandstone ridges with a steep escarpment to the south-west. • Glacial moraines within deep glens and on lower hill slopes create an undulating, irregular landform, broken by rocky outcrops. • Extensive heather moorland and some conifer plantations on ridge tops. • Irregular patchwork of pasture, with pockets of peaty marsh and scrubby damp woodland in hollows. • Tree cover increases on lower slopes, with numerous hedgerow trees; high proportion of conifers on escarpment slopes. • A dense network of narrow lanes links scattered farms and villages with infrequent, straight roads across the ridgetop moorland. • Presence of sand and gravel quarries.

© Mouchel 2016

LCA Boundary	Typical Descriptors
	**Dungannon Drumlins and Hill (No.45)** • Landscape comprised of steep, rounded drumlins. • Drumlins are separated by pasture, marsh and gently rolling mixed farmland, with occasional loughs. • Diverse landscape pattern, with field sizes progressively smaller and more irregular on steep slopes. • Most fields enclosed by hedgerows with numerous hedgerow trees. • Small broadleaf woodlands and larger conifer plantations. • Farms and settlements sited in sheltered locations on lower drumlin slopes, often associated with avenues and parkland trees. • A dense network of narrow, winding lanes.
	**Blackwater Valley (No.46)** • Flat marshy vale and floodplain of the River Blackwater, characterised by wet meadows, pasture and bog. • A secluded landscape enclosed by drumlins, extending isolated rounded hills across the floodplain. • Attractive historic designed landscapes, with woodland, lakes and grand houses; picturesque riverside settings. • Fields separated by bushy hedgerows and trees creating an enclosed wooded character. • Inaccessible, with few settlements; winding banked lanes give few views. • Rural, peaceful and unspoilt landscape.
	**Clogher Valley Lowlands (No.17)** • Broad lowland corridor with small rounded hills and long ridge lines. • Well farmed countryside with distinctive estate landscapes. Extensive grassland production on progressive farms. • Relatively dense vegetation cover of hedgerows, woods and tree belts. Large, mature trees on estates, around farms and along roads are a feature. • Numerous winding rivers and streams, with meadows, mills, bridges and loughs. • Many traditional buildings and small county houses of character.

© Mouchel 2016

LCA Boundary	Typical Descriptors
	• Concentration of raths and tree rings in valleys, crannogs in lakes and numerous listed buildings associated with estates.
	**Brougher Mountain (No.16)** • Broad, rounded sandstone ridges dissected by short, steep glens; escarpment to the north; steep summits and rounded loughs to the south. • Varied patchwork of land uses on the hills, with bog, improved grassland and rough grazing, contrasting with improved agricultural fields. • Mix of small and medium sized farms, with land reclaimed from bog or moor. Stone walls or hedgerows separate fields. • Isolated patches and strips of coniferous trees on hill slopes; mixed planting around farm buildings; willow and birch scrub on cut over bogs and around loughs. • Megalithic sites on uplands and a concentration of raths at lower levels.

APPENDIX 10B – LANDSCAPE ANALYSIS

Introduction

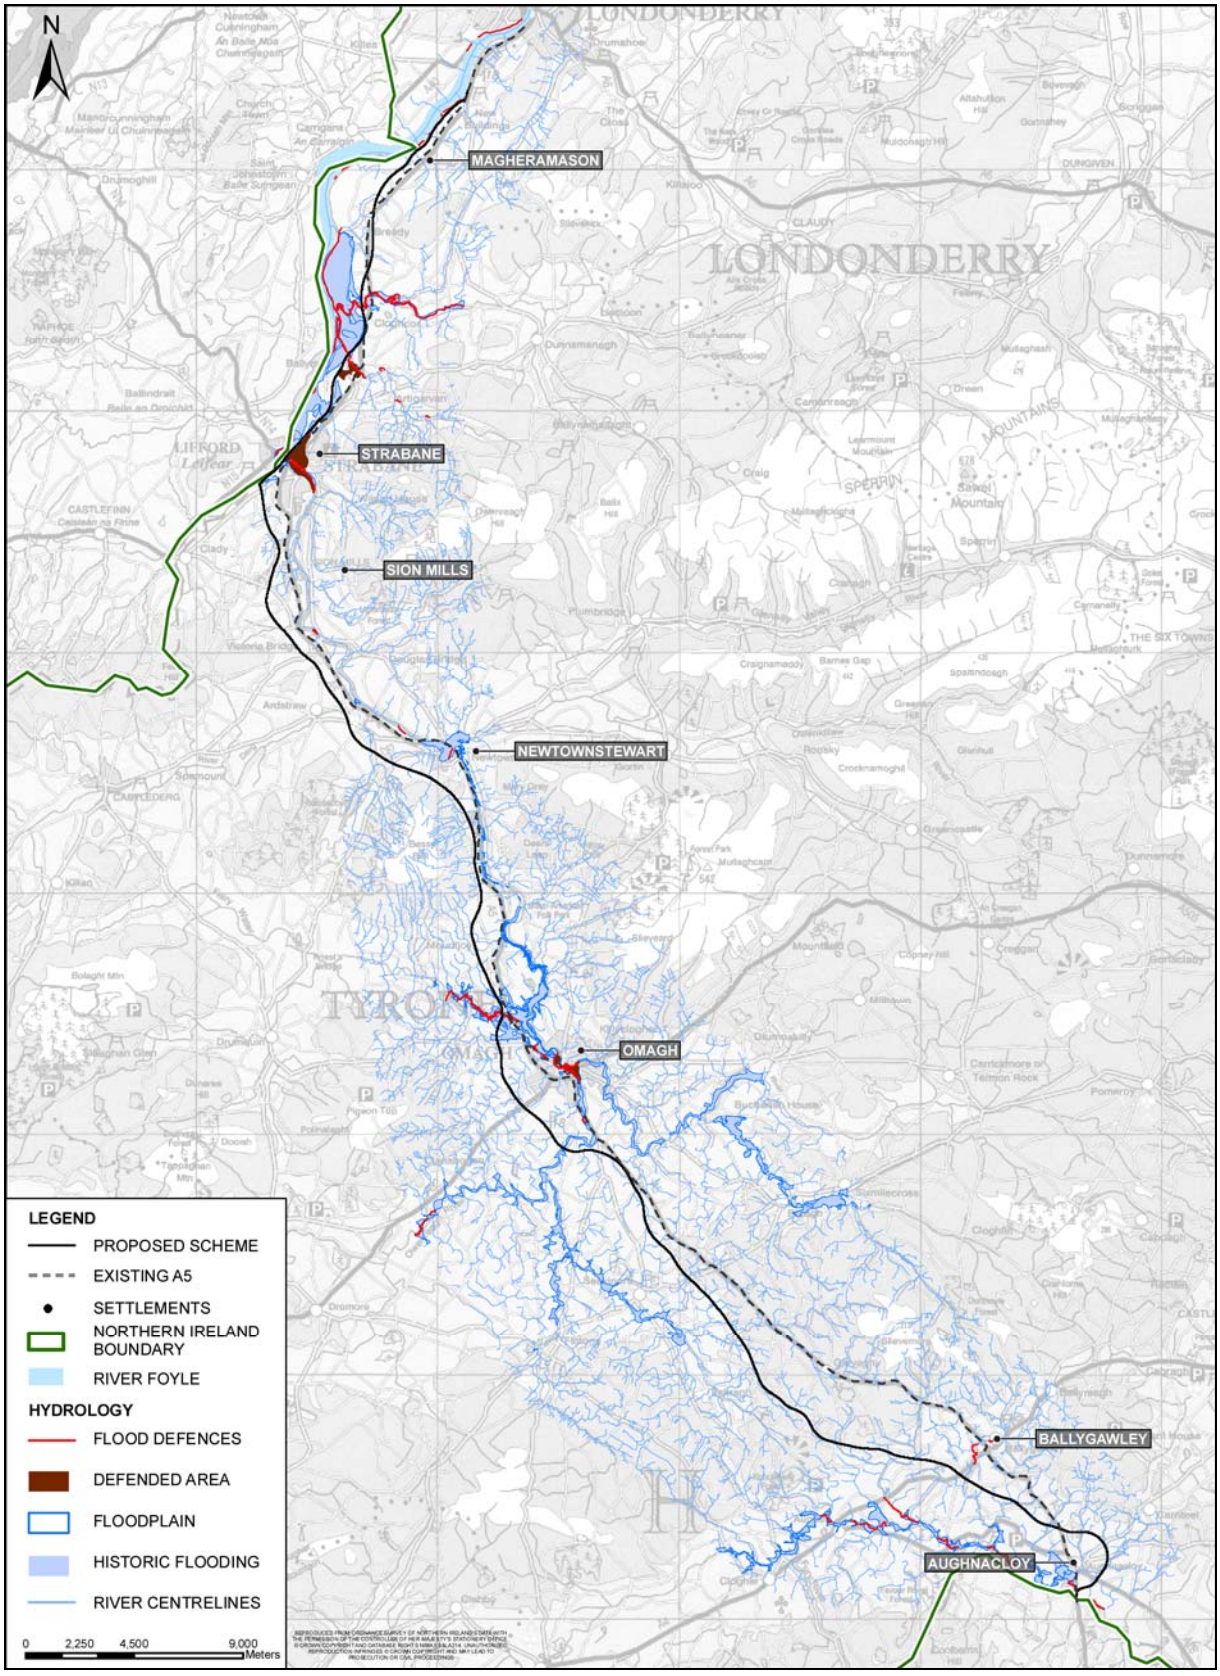
This appendix provides additional information on the landscape forms and features that have contributed to the establishment of Local Landscape Character Zones and Sub-Zones.

Much of this data has been collected or downloaded from publicly accessible websites or has been provided by statutory agencies, the remainder has been collected and interpreted by a team of landscape architects and archaeologists from site surveys carried out during 2008 and 2009.

Each data set is accompanied by a supporting figure and analysis of the key features and patterns observed.

© Mouchel 2016

Figure 10B-1 Distribution of Hydrology



Hydrology

The hydrology of the study area is sub divided into two main river systems separated by the sandstone ridgeline of the Brougher Mountain range. The Rivers Strule, Mourne and ultimately the Foyle flow from the farmland around Omagh to the north, whilst the River Blackwater is fed from a complex of tributaries running south of the ridgeline; both are described in more detail below.

The Foyle catchment

The Strule/Mourne/Foyle complex lies to the north of the Brougher Ridge. The widespread landscape of rolling drumlins results in a largely discreet river pattern, particularly to the farmland around Omagh. The valley forms become more evident to the north as the tributaries of the Strule gradually merge to form a wider valley profile becoming clearly evident around Mountjoy. Northwards, the River Strule enters a deeply incised valley between the hill mass of Bessy Bell to the west and the outlying Sperrin Hills to the east. The valley is typically well wooded but is visible from the existing A5 and scattered properties along the higher slopes.

To the north, the river valley forms a confluence with the Rivers, creating more extensive meanders around the setting of Newtownstewart before merging with the Derg River to form the Mourne River. The Mourne continues broadly to the northwards in a series of meanders within broadening U-shaped glacial valley, within which the settlements of Victoria Bridge and Sion Mills are set.

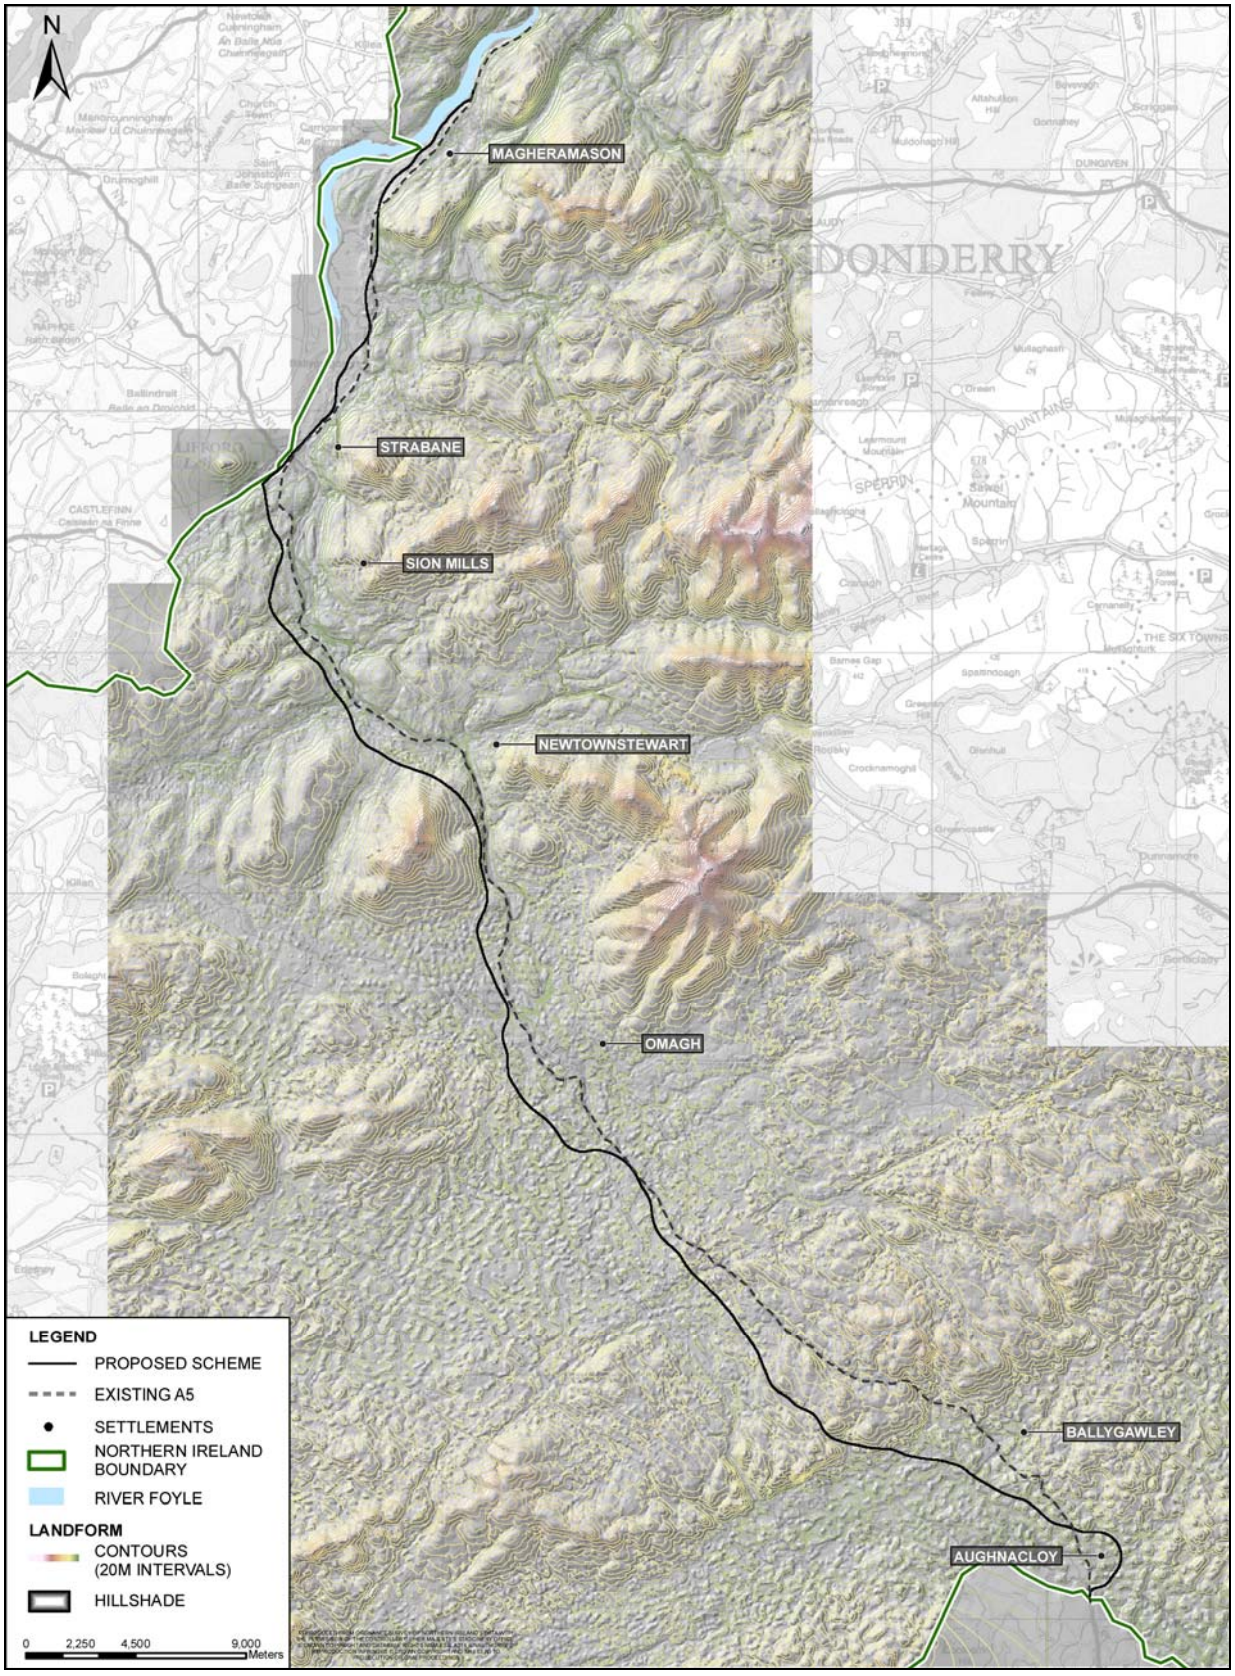
At Strabane, the now broad Mourne River merges with the Finn River to form the River Foyle. The confluence of the rivers is fringed by a series of wet meadows and grazing land defended by a number of raised banks to form flood defences but that also screen views of the rivers within their setting of the towns of Strabane and Lifford. The river is clearly visible from the defined hill slopes to the east and west with the river complex forming a distinctive feature and the focus to views of the wider landscape.

The Blackwater catchment

To the south of the Brougher Ridgeline, the Blackwater complex is fed by numerous small ditches and streams that meander through the extensive drumlin landscape. The river forms a series of sinuous meanders broadly eastwards passing Clogher and Augher to Auchnacloy before turning in a south easterly direction, eventually to outfall at Lough Neagh to the east. The river is typically wooded along its course and combined with the undulating drumlin landscape forms a discreet element within the wider landscape setting.

© Mouchel 2016

Figure 10B-2 Distribution of Landform



Landform

The land form of the study area has been formed by a glacial and fluvial action, influenced by its underlying geology.

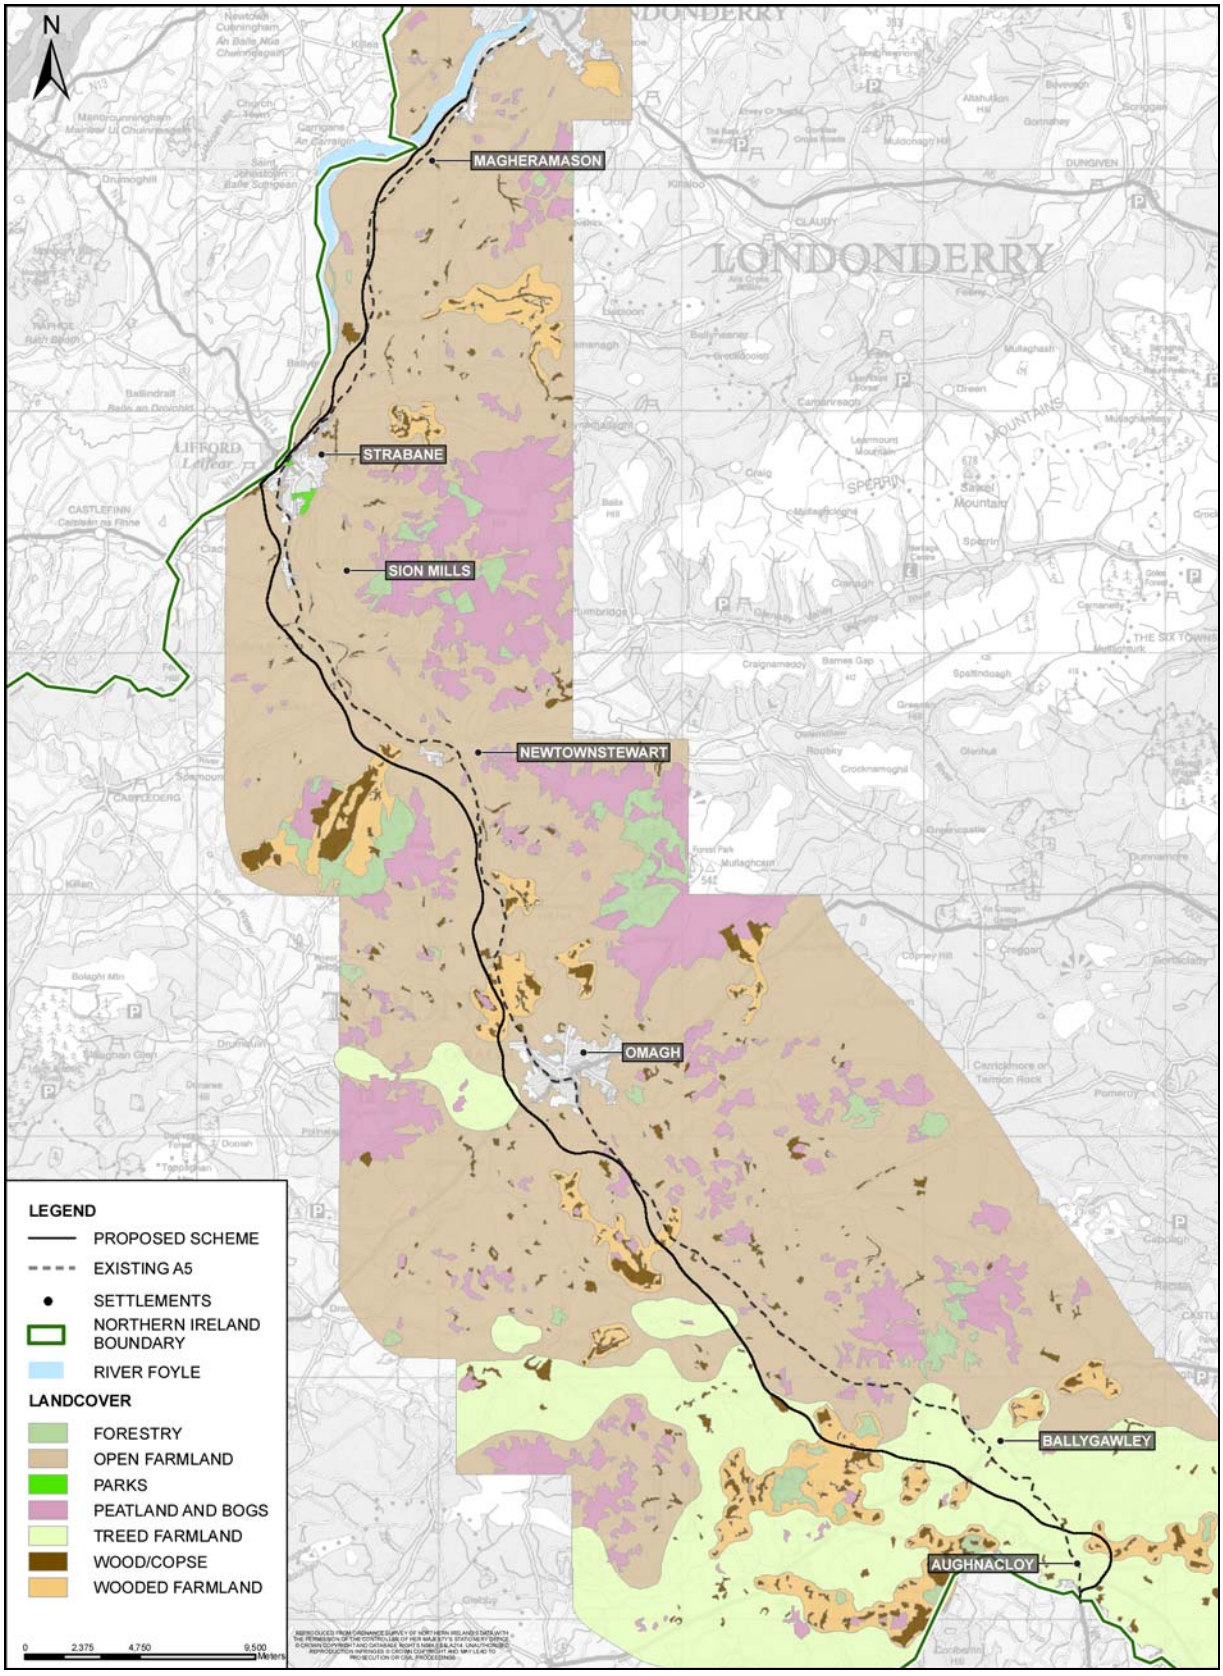
As a result of the widespread ice sheets that partially covered this part of Ireland in the last ice age, glacial activity has led the creation of a characteristic post-glacial landscape, with physical features that remain visible today. These include broad open glacial valleys flanked by high hills, extensive drumlin fields and kames formed as a result of the deposition of glacial material and the development of some areas of deep boulder clays. Broad glacial valleys are evident to the north of the study area, along the Foyle Valley and along the edge of the Sperrin Hills around Gortin. To the south, beyond Omagh and particularly south of the Brougher sandstone ridgeline, drumlin landscapes become increasingly evident, giving rise to the familiar ‘basket of eggs’ topography of rounded and elongated hill forms.

Subsequent fluvial activity has further modified the post-glacial landscape. Broad river valleys host meandering river systems and their associated floodplains; the Rivers Strule, Owenkillew and Derg converging at Newtownstewart to form the Mourne, which meets the Finn River at Strabane towards the broad valley and surrounding floodplain of the Foyle Valley. Aside of these main valleys and in the drumlin landscapes to the south, streams and watercourses form relatively discreet features, winding between the low hills and forming localised floodplains.

As a result of undergoing these geological and hydrological influences the land form of the study area is one that shows marked change throughout its length. The dramatic contrasts in levels from the floodplains of the River Foyle and the surrounding hills of Croaghan and Knockavoe Hills in the north; the deeply incised river valley of the Strule to the east of Bessy Bell; and the extensive drumlin fields to the south of the Brougher sandstone ridgeline..

© Mouchel 2016

Figure 10B-3 Distribution of Land Cover



Land Cover

Criteria

For the assessment, the landscape component of land cover is defined under the following categories:

- Open farmland – Farmland with few trees and no substantial areas of woodland. Typically extensive in scale leading to broader views more frequently interrupted by hedges or landform.
- Treed farmland – Farmland with frequent hedgerow trees and occasional small copses/covets. The type leads to a sense of enclosure in specific locations although broadly a sense of openness is retained.
- Wooded farmland – Farmland with frequent hedgerow trees and a significant proportion of woodland. This type results in little awareness of the wider countryside due to the extent to which the woodland combines with landform to enclose wider views.
- Parkland – This type is one that is heavily managed, commonly it is grazed land, with frequent mature trees (frequently veteran) laid out to form views and vistas, frequently associated with estate buildings/large residences.
- Peatlands & Bogs –. Occurring in the high open moorland as blanket bogs associated with mountains and within the rolling lowlands commonly associated with pioneer woodland and typically unenclosed and typically forming smaller discreet entities.
- Forestry – Extensive tracts of plantations/woodland, commonly of the same species with numerous access tracks and fire breaks. Typically these areas are planted in upland areas and in broadly geometric shapes, visible at some distance.
- Moorland – Extensive areas of generally unenclosed upland/mountainous landform commonly used as grazing.

© Mouchel 2016

Analysis

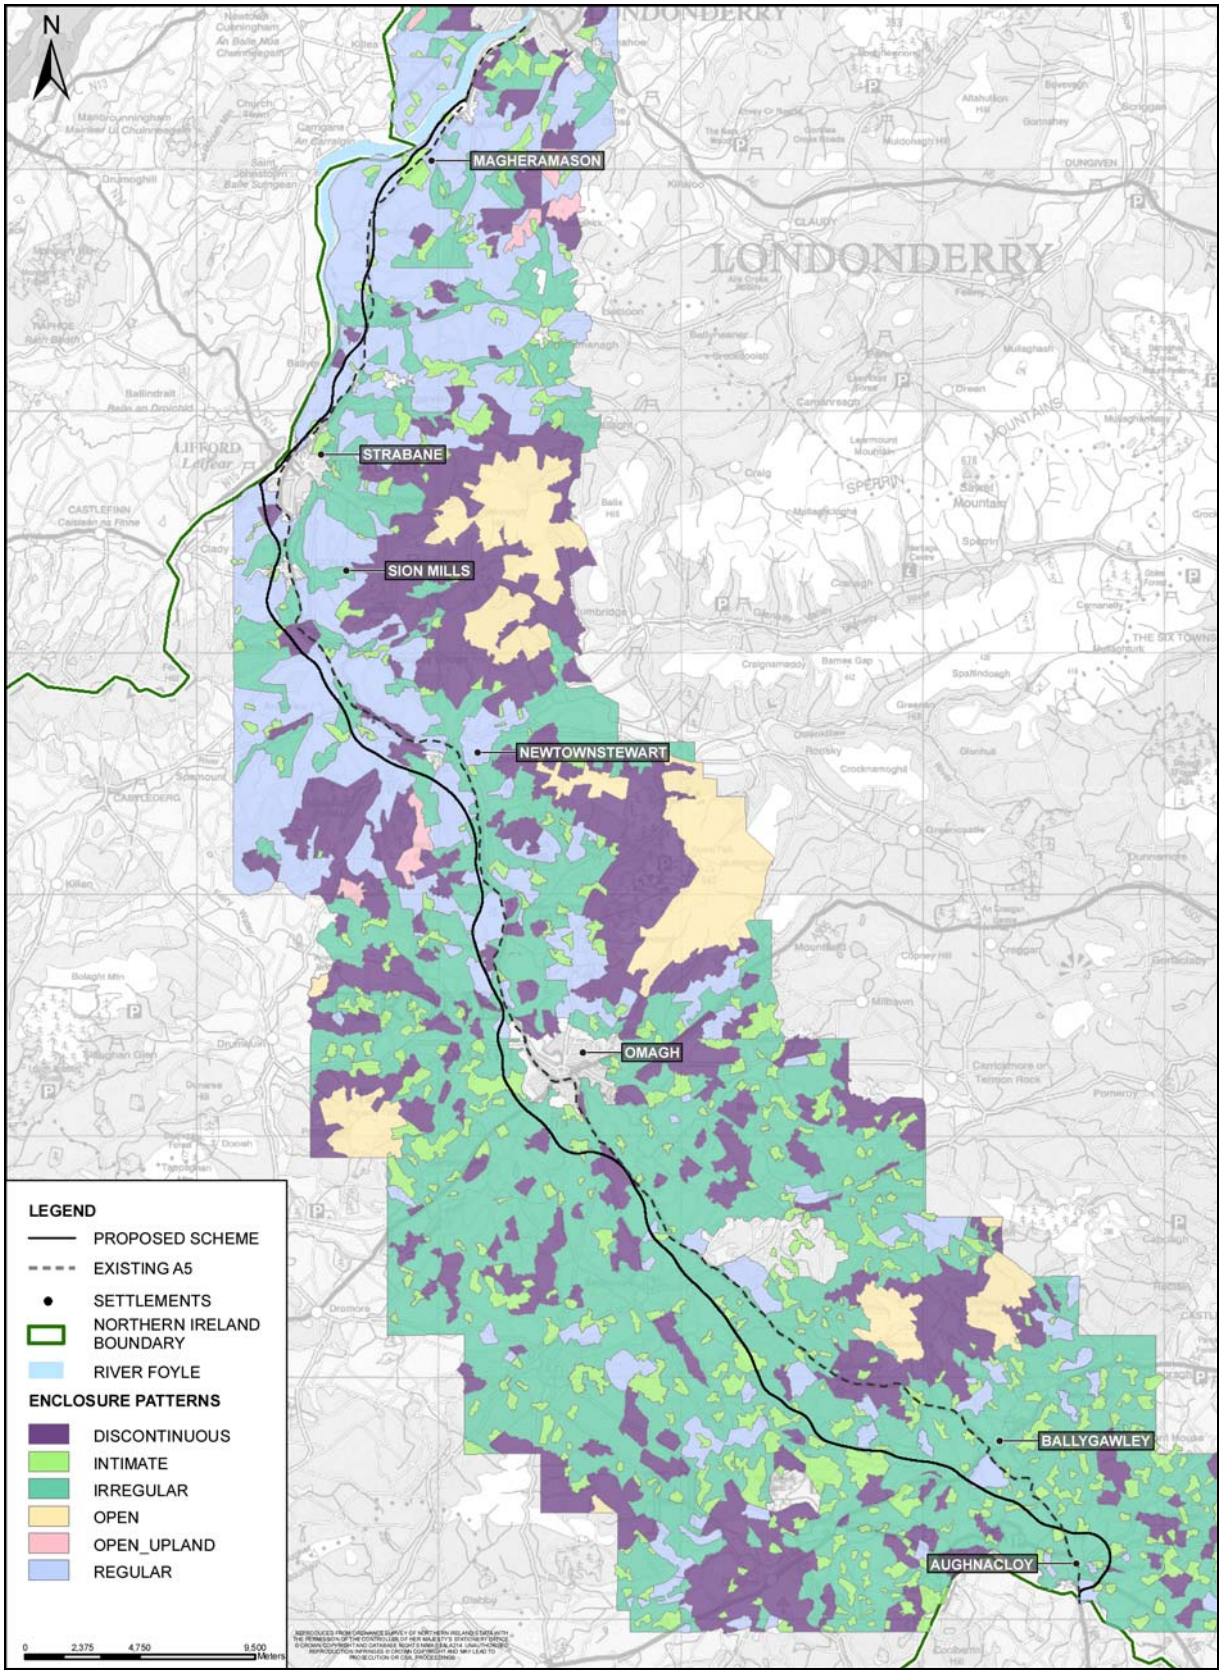
The study area displays a broad split between the two most extensive land cover types; to the north the majority of the area is classed as open farmland with a broadly open nature, few areas of woodland and typically infrequent hedgerow trees. To the south, tree cover noticeably increases with frequent hedgerow trees and small but frequent areas of woodland and covets, giving a greater sense of enclosure in combination with the landform.

Elsewhere throughout the study area peatlands and bogs are frequent, their distribution dictated by the local landform. They are evident on higher ground e.g. Bessy Bell and Mullaghcam where they form large open areas of blanket bog in association with moorland. On lower ground, raised bogs retain a widespread distribution however their small scale and dispersed patterns are in marked contrast to their upland counterparts.

Elsewhere small areas of wooded farmland occur, commonly associated with the areas of more extensive woodland planting, indicated on the plan as Wood/Copse. Here there is a marked increase in the frequency and density of hedgerow trees and more extensive woodland resulting in a significantly increased sense of enclosure that reflects local landform and landscape enclosure patterns. These areas contrast with the visually prominent areas of forestry that occur to the higher ground, whose straight lines and darker hues form noticeable land cover features. These are particularly evident around Gortin Forest Park and to the western slopes of Bessy Bell, the Brougher ridge to the south and the plantations of Favour Royal Forest near Aughnacloy.

© Mouchel 2016

Figure 10B-4 Distribution of Enclosure Patterns



Enclosure Patterns

Criteria

For the assessment, the landscape component of enclosure patterns is defined under the following categories:

- Intimate – Commonly associated with farmsteads and typically comprising several small paddocks used for grazing. Typically enclosed by mature hedgerows, providing shelter to livestock.
- Irregular – Small enclosure patterns commonly linked with local winding lanes and roads to give a piecemeal appearance that reflects local landform. Fields generally small and of less than 1 hectare
- Regular – Medium fields commonly formed by the amalgamation of several small fields to develop straight boundaries that provide easier management techniques. Fields generally of medium sized and typically 1 – 3 hectares
- Geometric – Larger fields heavily modified and typically occurring on flatter ground e.g. drained floodplains and comprising rectilinear fields with straight boundaries. Fields generally large size and typically greater than 3 hectares.
- Discontinuous - Commonly disrupted/disturbed/destroyed field patterns that as a result in changes to farming practices are less or no longer apparent, typically occurring to the fringes of higher ground or to the urban fringes.
- Unenclosed – Areas of upland/peatlands, typically featuring areas of moorland or plantations with sporadic or no clear enclosure patterns.

Analysis

Enclosure patterns within the study area vary throughout, although there is a marked difference between the open and regular frameworks to the north and the irregular, more intimate field patterns that occur frequently to the south. There is a gradual transition of enclosure between Omagh and Newtownstewart, with a noticeable increase in the proportion of discontinuous enclosure on higher ground. The change of enclosure pattern is due in main to the change in terrain, with the distinctive rolling drumlin landforms south of Omagh commonly dictating a more irregular and intimate field pattern. The flat, broad floodplain of the Foyle valley and tributary valleys tend to comprise larger and more regular field networks, suited to the location.

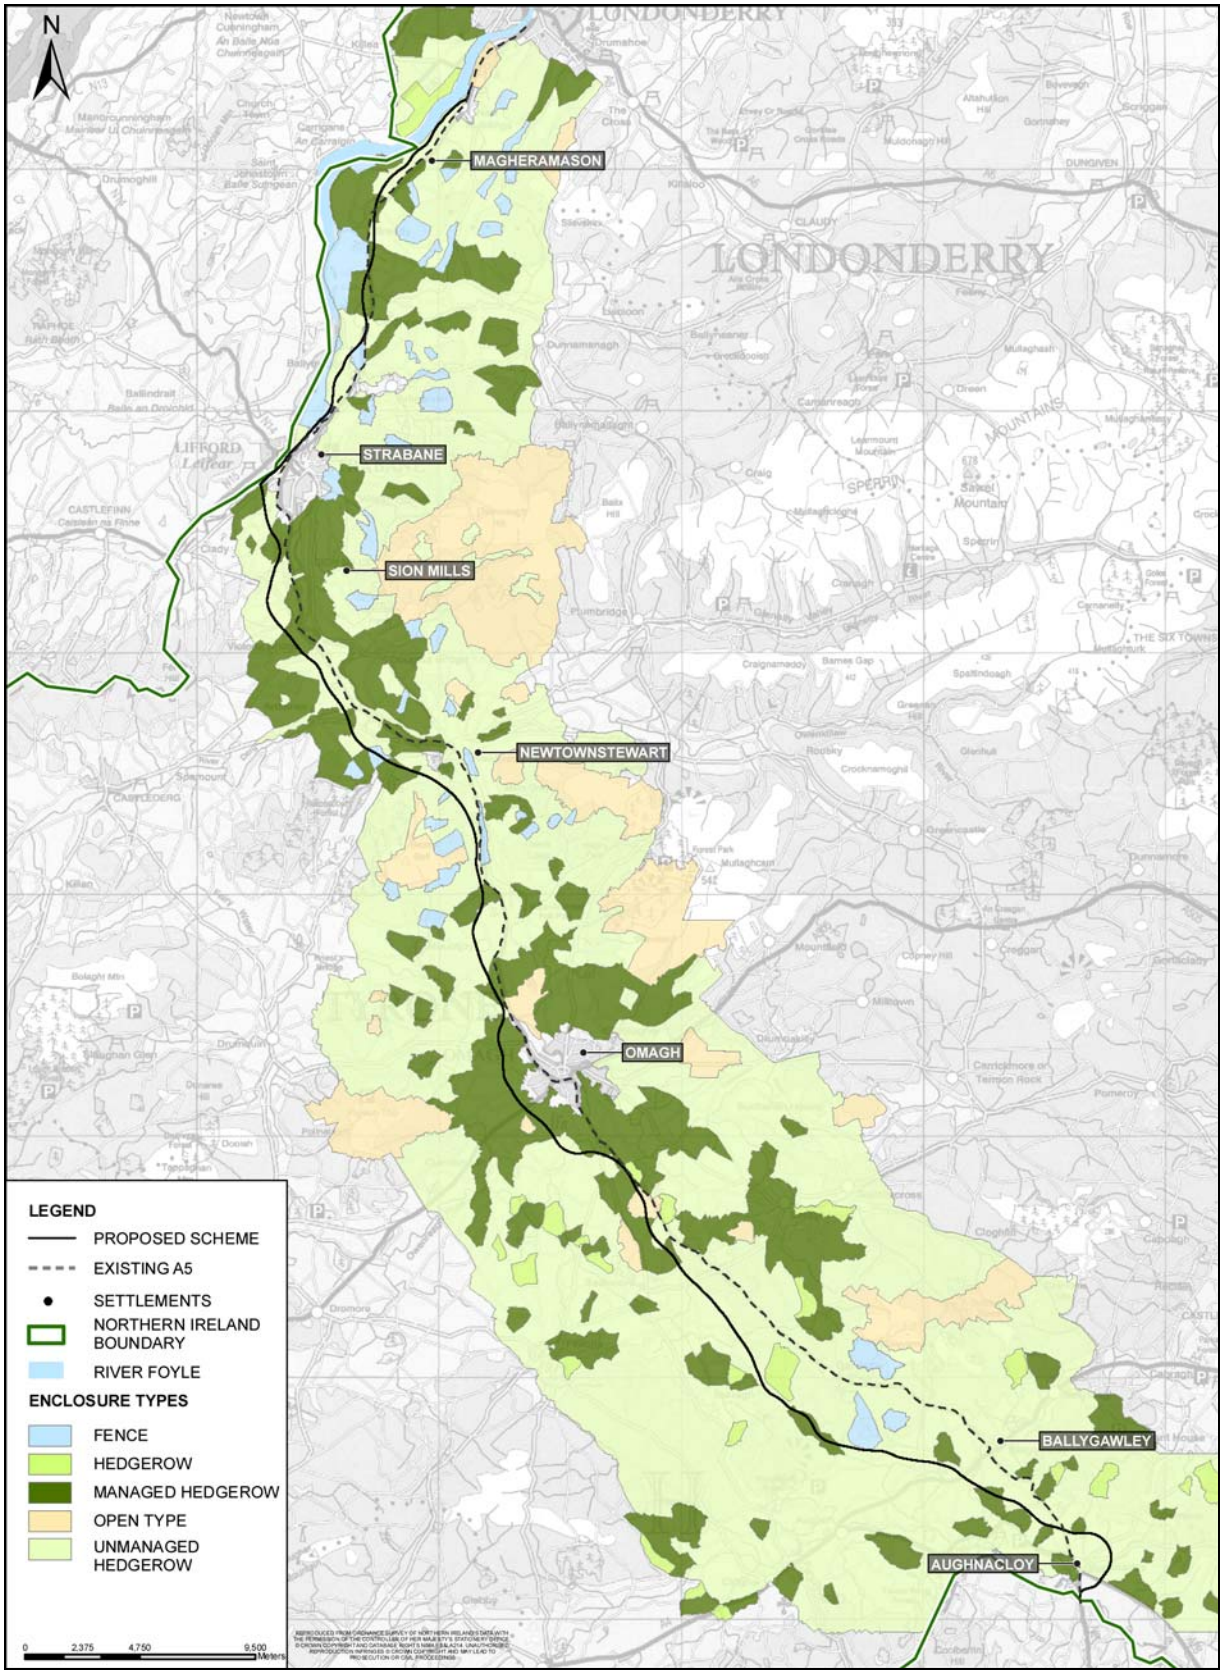
Discontinuous enclosure is typically found on the higher ground of the Sperrin Hills and across the distinctive hills and ridges that surround the Proposed Scheme corridor. On the higher moorlands of the Sperrins and along the Brougher Ridge to the south, the practices of sheep farming and plantations require infrequent enclosure where these exposed landscapes have an open character.

© Mouchel 2016

Within the drumlin lowlands there is an even spread of discontinuous enclosure, notably in conjunction with scattered raised bogs and interspersed between the more extensive irregular field patterns typical of the location. The association with older, established farmsteads with limited intensification of farming practice retains a settled pattern of enclosure across much of the lowland drumlin landscapes south of Omagh.

© Mouchel 2016

Figure 10B-5 Distribution of Enclosure Types



Enclosure Types

Criteria

For the assessment, the landscape component of enclosure types is defined under the following categories:

- Managed hedges – Hedges that have evidence of regular trimming but that may also contain intermittent hedgerow trees.
- Unmanaged hedges – Hedges that show little evidence of management techniques, typically outgrown and with gaps. The lack of management typically results in intermittent hedgerow trees.
- Hedgerows – A strong hedgerow structure that typically has some management but that also contains frequent mature hedgerow trees.
- Fence lines – Areas that typically comprise post & rail or post & wire fences as the dominate enclosure type.
- Dry stone walls – Stone walls constructed of local materials, typically poorly maintained but frequently form locally noticeable features within the wider landscape.
- Ditches/Flood Banks – Typically found on low lying areas or associated with watercourses, frequently earth banks may also contain hedges of varying management techniques.

Analysis

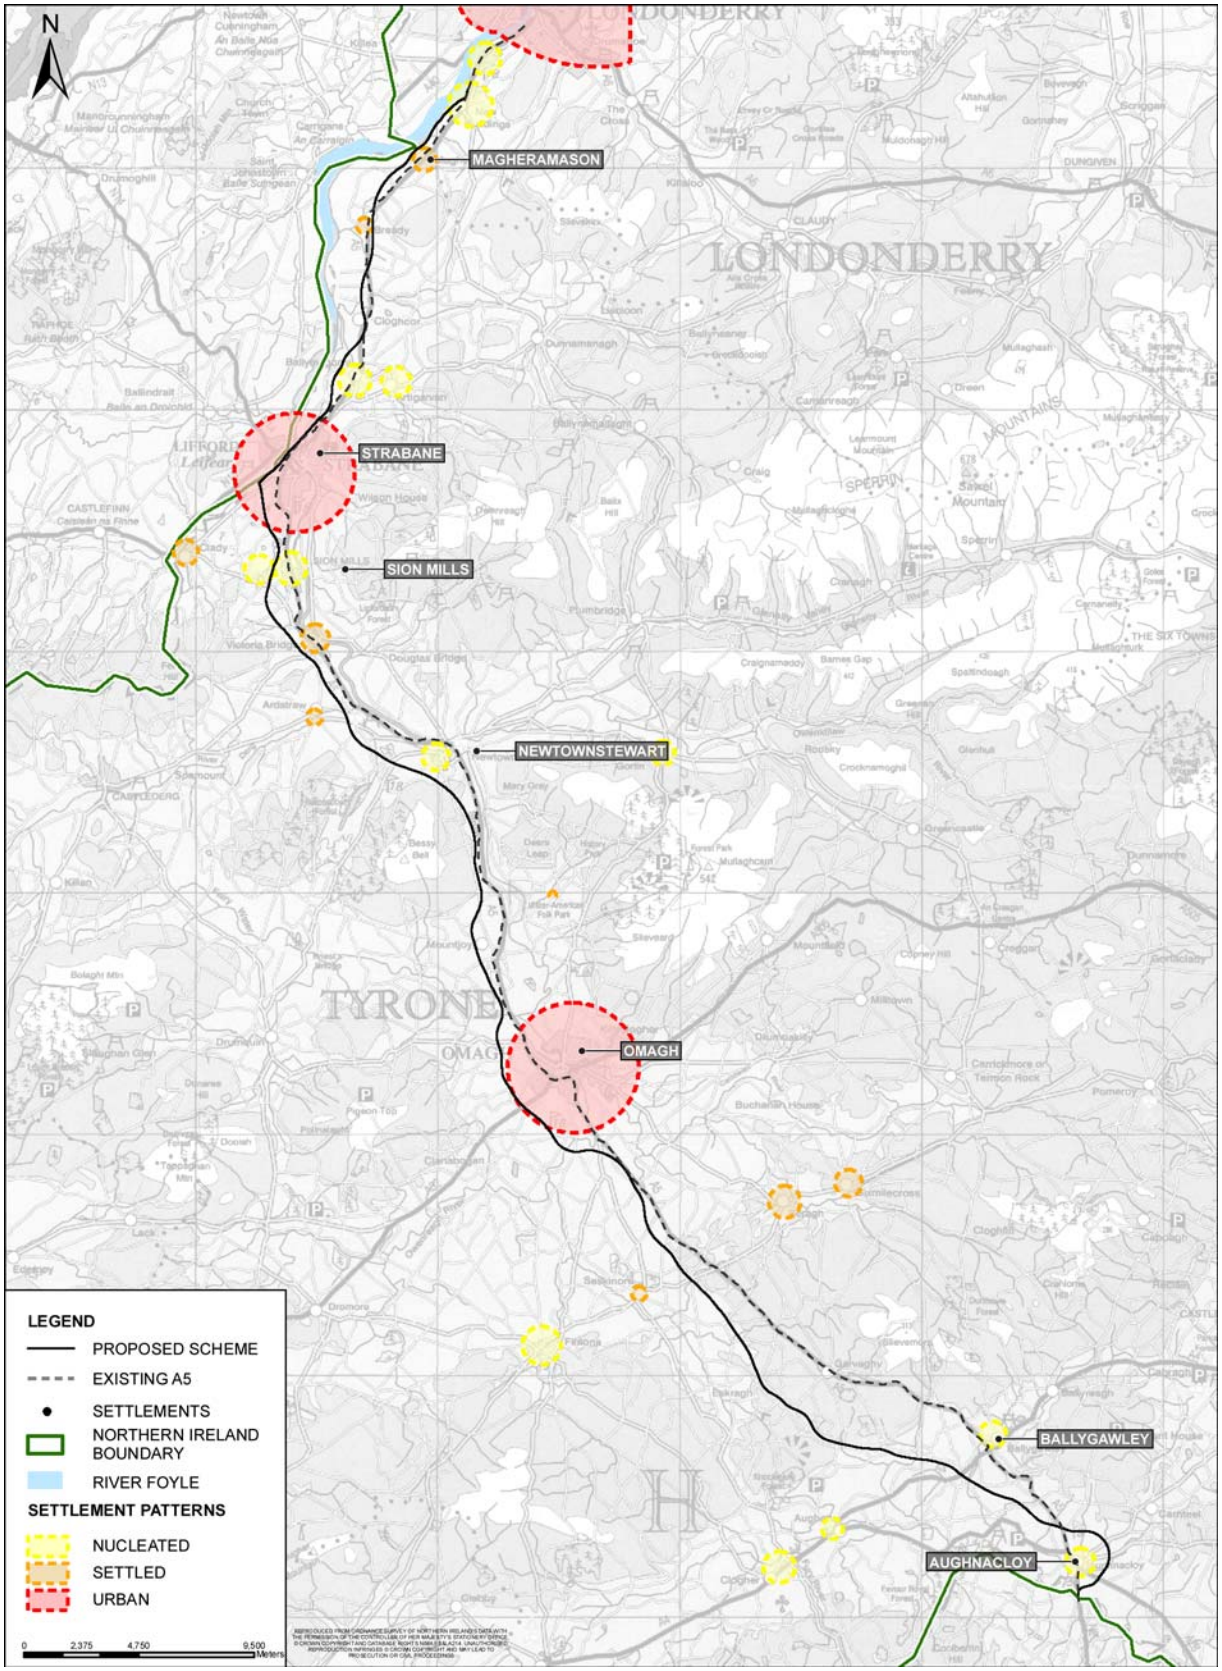
The main enclosure type along the Proposed Scheme corridor is a mixture of managed and unmanaged hedges, the southern section of the Proposed Scheme Corridor more noticeably less managed.

Fence lines are typically more common along steeper slopes and higher ground, along with areas that have been more recently drained e.g. sections of the Foyle Valley floodplain. Fences are much less evident south of Bessy Bell/Gortin area, where only occasional pockets are evident within a network of hedge lines.

As would be expected, a somewhat discontinuous and open enclosure pattern becomes more evident across higher ground throughout the Sperrin Hills, Bessy Bell and on Slievemore to the south.

© Mouchel 2016

Figure 10B-6 Settlement Patterns



Settlement Pattern

Criteria

For the assessment, the landscape component of enclosure types is defined under the following categories:

The landscape component of settlement patterns was broken down into the following categories:

- Urban – Medium/Large scale development (main centres).
- Nucleated – Tight, well defined settlements, settled core e.g. Auchnacloy.
- Settled – Indistinct pattern of ribbon development typically new build along roads
- Dispersed - hamlets and individual properties/farmsteads separated by significant tracts of farmland.

Analysis

The main urban centres of Londonderry, Strabane and Omagh are located either within, or in close proximity to the study area and connected by the main transport corridor of the existing A5.

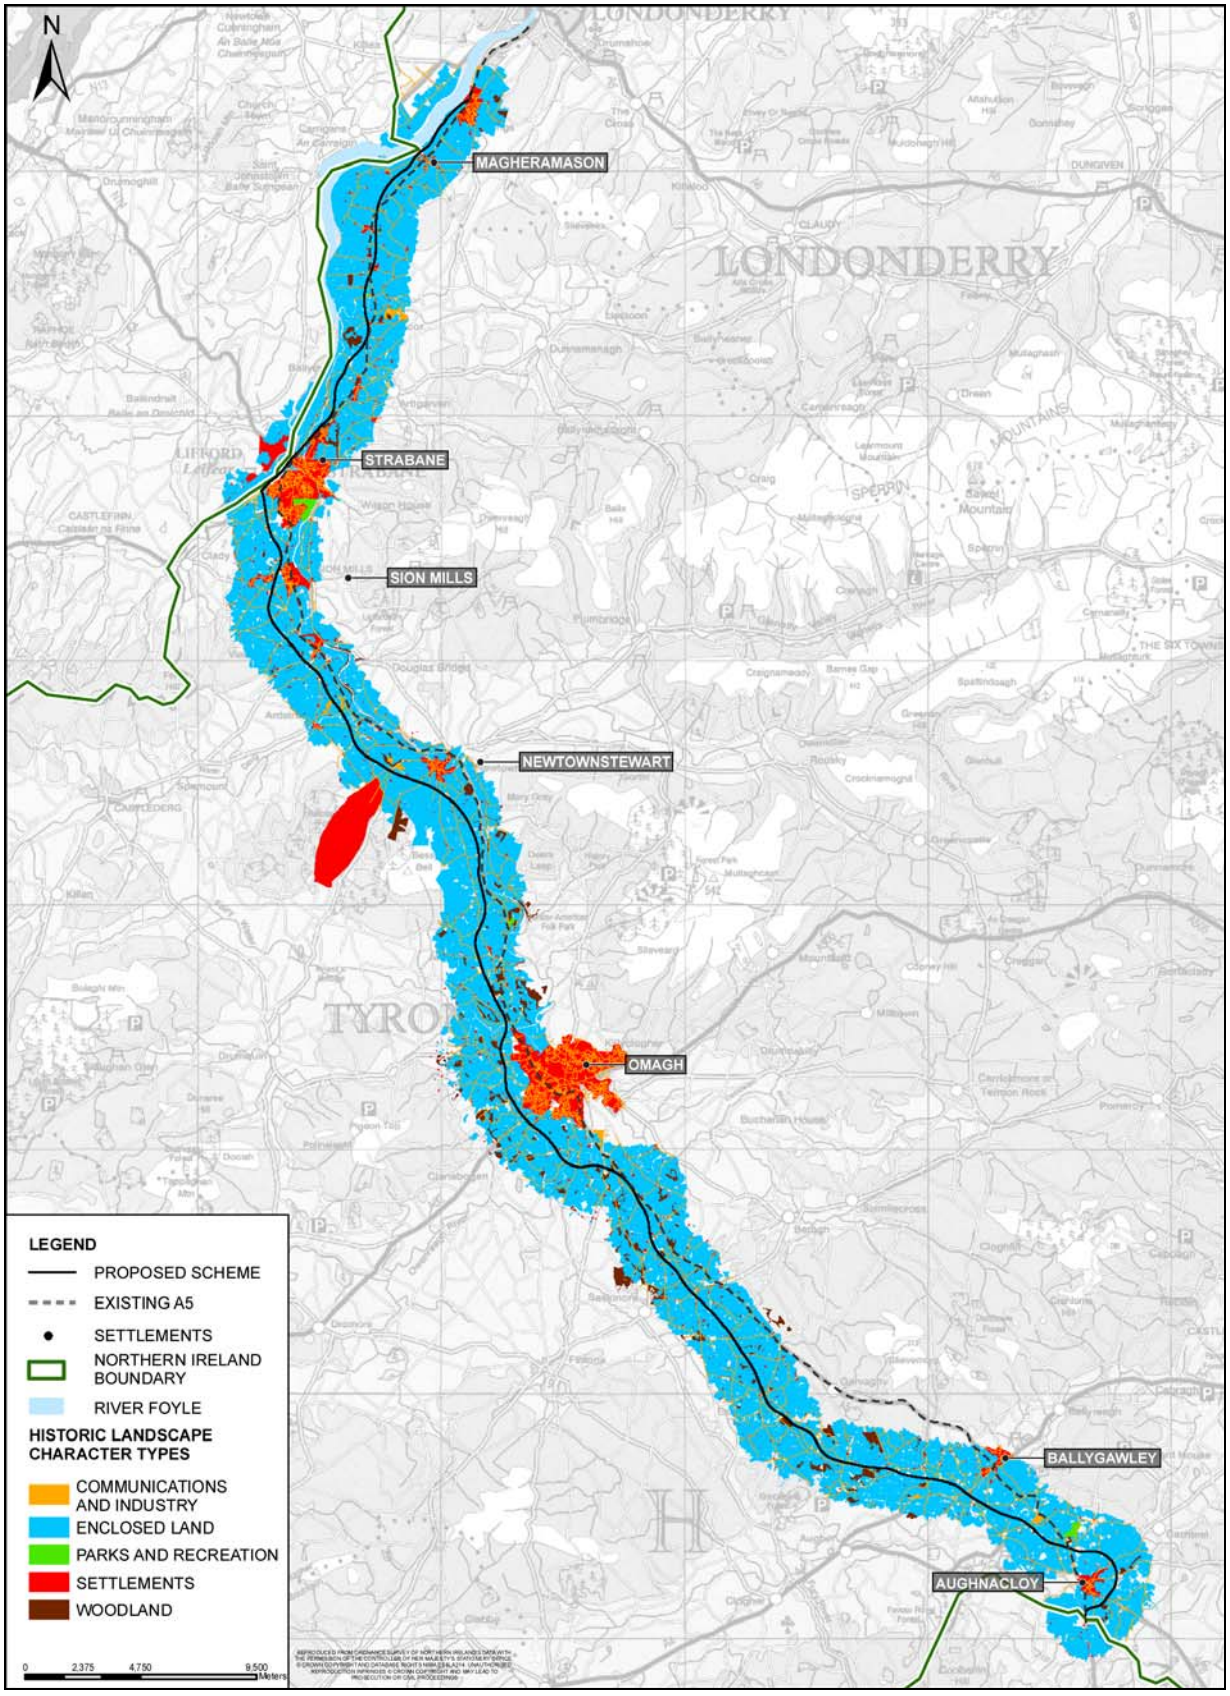
Between these urban populations are smaller, nucleated settlements, dispersed along the main transport corridors and providing important local services to the wider farming communities. Settlements such as Sion Mills and Newtownstewart bear close historical association with the major river corridors that flow through the landscape, for issues of transport, defence and industry. Smaller communities are located along the primary road corridors, either in the form of small nucleated settlement or less defined, ribbon development.

Away from these larger centres and satellite villages on transport networks, the settlement pattern is one of widespread farmsteads and individual properties. Older properties typically comprise clusters of buildings and barns accessed via narrow access tracks, whilst more recent development is frequently large detached properties, set immediately adjacent to the main thoroughfares.

On higher ground settlement becomes increasingly scarce as a result of farming practices and relatively low productivity of the land; occasionally more recent and isolated dwellings have been constructed to enjoy the wider views from such vantage points.

© Mouchel 2016

Figure 10B-7 Cultural Heritage



Cultural Heritage

The historic landscape character of the study area is defined by a number of different character types. These include enclosed land; woodland; settlement; communications and industry; and recreation. The most dominant type is enclosed land and its historic legibility and dimension is described below, followed by the other historic landscape types.

The historic landscape of the study area is characterised largely by late 19th – early 20th century regular enclosures which drastically altered the appearance and use of the landscape. The landscape within which Irish society lived and functioned was, for the majority of history, a largely open one with isolated settlements scattered throughout. An analysis of the 1st edition historic maps shows that although enclosure was well on its way within Tyrone by that time more much of the landscape was unmanaged and characterised by piecemeal enclosure. The size and shape of enclosures were often dictated by the topography, road and river networks. While a number of field boundaries which exist today can be identified on the 1st edition OS maps these are isolated occurrences and do not effect the historic character of the landscape.

The continual enclosure and alteration of the landscape has resulted in a complete change in the appearance and use of the landscape since the mid-19th century. The rapid enclosure of the late 19th and early 20th century reflects the change in the land ownership of Tyrone at this time. The Land Acts of the 1880s – 1900s were a major contributing factor in the large scale change that occurred within the Irish landscape. These Acts, established by the British government in an attempt to answer the 'Irish Question', allowed for tenants to purchase their land from the landlords. These Acts effectively ended landlordism in Ireland and facilitated the rapid enclosure of the landscape. These changes to the economic and social structure of Ireland at this time were reflected in the significant change to the landscape. The landscape we see today is a product of this time and as such is an important reflection of a time of dynamic and extensive change in the history of Ireland.

There were extensive forests in Ireland up until 1600. The industrialisation of Ireland, together with the plantations and population increases all contributed to the deforestation of the country. By 1800 there were very few forests in existence in the country. During the 20th century it was recognised that a programme of forest plantations was needed and the plantations we see today are the product of these schemes. There are a small number of wooded areas in the present landscape which were in existence during the 1840s. While areas such as Strabane Glen and Baronscourt Estate retain their historic legibility much of the other forested areas within the study area are modern plantations dating to the 20th century.

The dominant type of settlement in the study area, as with the rest of Ireland, is one of isolated, dispersed, individual dwellings which are spread throughout the countryside. The majority of these houses are 20th – 21st century structures. Although the structures themselves are modern, this pattern of settlement has a long history in Ireland and is a dominant feature of the historic landscape. Many houses have been constructed on or next to the site of 19th century or older dwellings which are no longer occupied. Nucleated settlements are dispersed throughout the study

© Mouchel 2016

area. These range in size from the large county town of Omagh to small villages such as Newtownsaville. With the plantations of the 16th and 17th centuries came a wave of town, estate and village building. Both Omagh and Strabane date to this time. While retaining their historic cores the towns of Omagh and Strabane have significantly expanded in the 20th century to the extent that the overriding character of the towns, particularly the areas closest to the Proposed Scheme, is one of modern development.

The landscape feature with the most historic legibility is the road system. The majority of the back roads within the study area can be seen on the 1st edition maps and the boundaries at the sides of these roads, most often high hedges, are the most frequent historic elements to survive within the present day landscape and one which gives the landscape a sense of time depth beyond the 19th century.

There is little evidence of large scale industrial activity within the study area during the mid 19th century. Industry tended to occur on a small scale and sites such as bleaching fields are detailed on the 1st edition maps. These however are not represented on a landscape scale and little physical evidence of this 19th century industry remains today. There are also no evidence recreational areas which can be said to have historical time depth.

© Mouchel 2016

Summary

The study area of the Proposed Scheme comprises a largely rural landscape of pasture bounded by hedgerows, heavily influenced by the local geology and hydrology of the area.

Geological processes have influenced local landform to create distinctive landscape types, from extensive drumlin terrain to sandstone ridges, upland moorlands and blanket bog. Hydrological effects have resulted in the formation of a number of locally significant river corridors that generally flow either north towards the Foyle valley or south to join the Blackwater Valley.

Human and cultural influences on the landscape are evident throughout the Proposed Scheme corridor, the most distinctive of these being the effect that widespread farming practice has had on aspects of land cover, enclosure types and patterns that help define local landscape character. Relics of past settlement and culture still influence the way in which the landscape is perceived and provide a visible sense of time depth.

Settlement pattern tends to be focused along the river valleys and confluences, in particular the margins of the Foyle Valley to the north and within the nucleated towns of Strabane and Omagh. Beyond the primary valleys and transport corridors, settlement is restricted to scattered farmsteads and dwellings across an open rural farmland.

The landscape analysis demonstrates a clear sequence of broad character change throughout the length of the Proposed Scheme; from the expanse of the Foyle Valley and its settled margins, across the margins of the Sperrin Hills, through defined and contrasting river landscapes to the extensive drumlin farmlands of Omagh and the Brougher Ridge beyond. Subtle character change is experienced within this physical landscape framework, where particular land uses, habitats or settlement pattern combine to locally influence character perception.

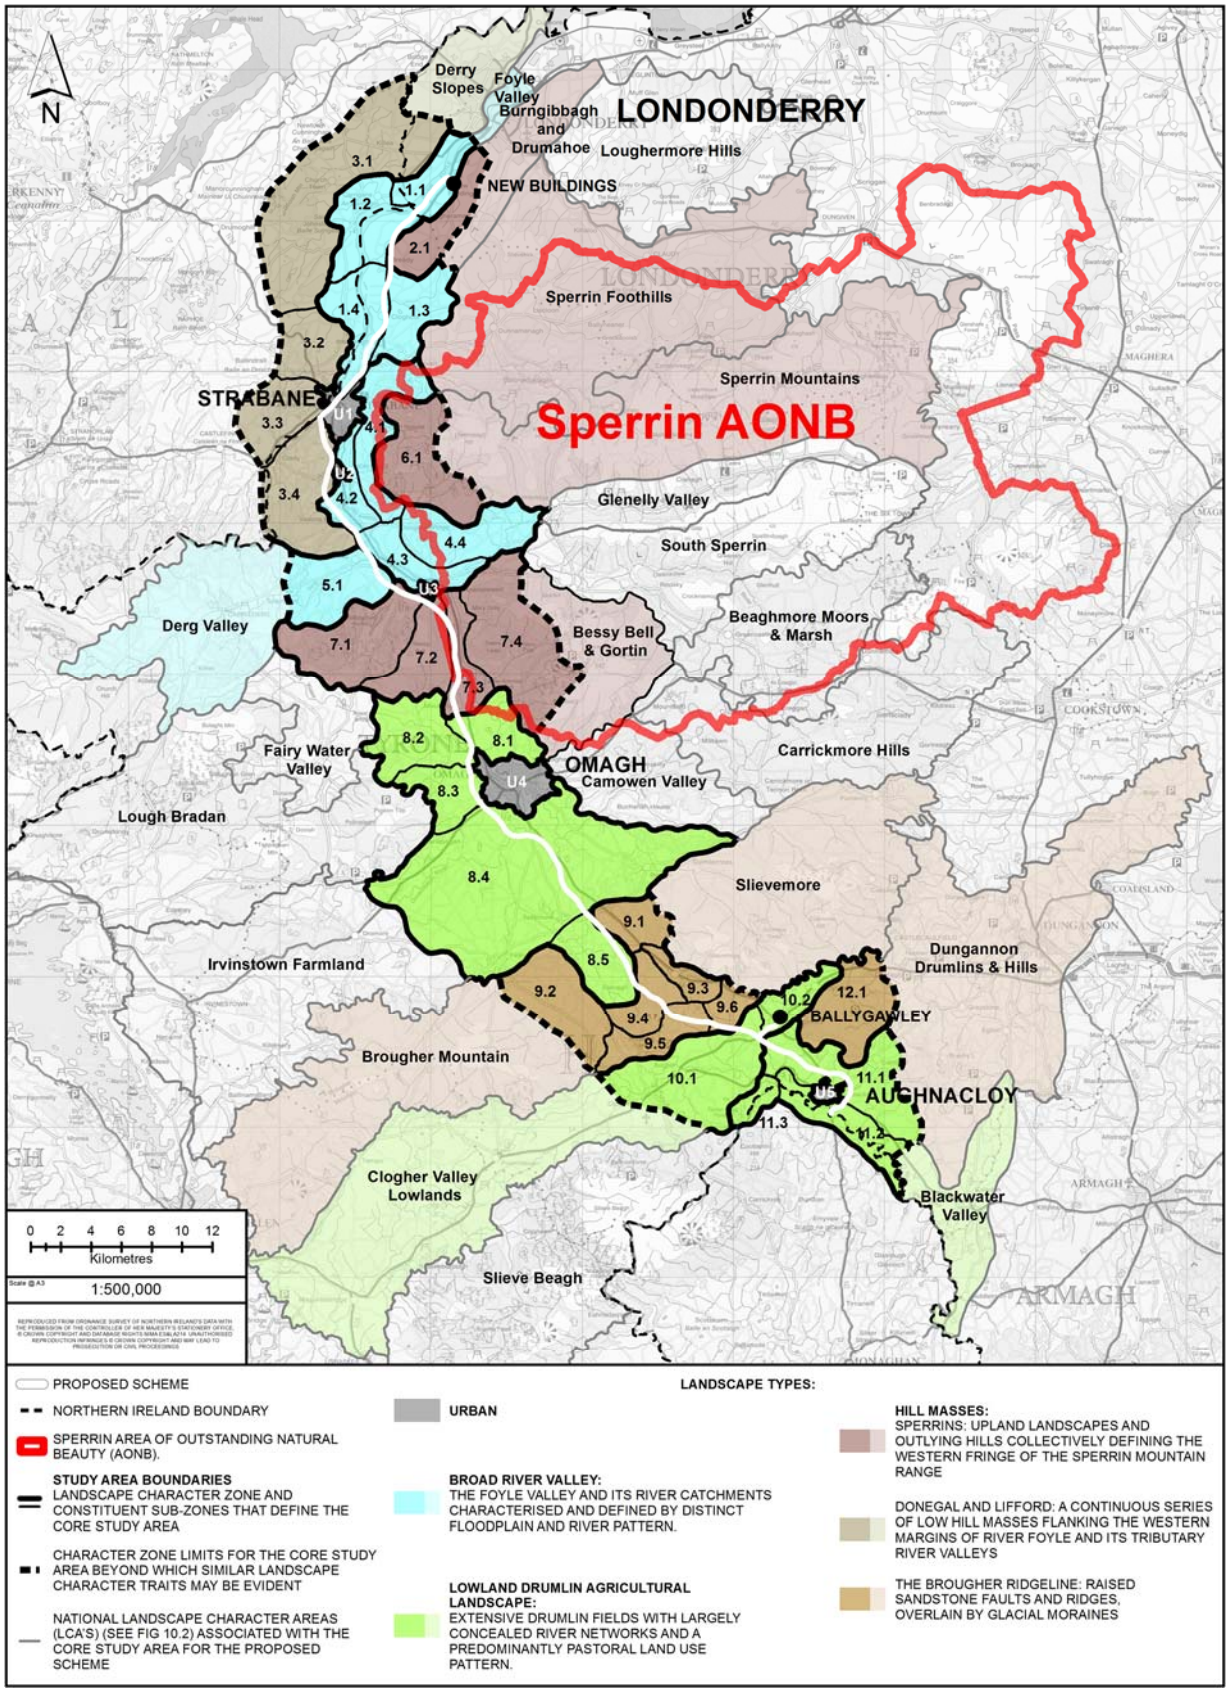
APPENDIX 10C LANDSCAPE CHARACTER SUB-ZONE (LCSZ) INFORMATION SHEETS

Introduction

This appendix provides data sheet summaries of the detailed analysis work undertaken in assessing the landscape character of the Proposed Scheme Study Area. The landscape is divided into local character zones (LCZs) and constituent sub-zones (LCSZs) each with a summary assessment of sensitivity to change of the type proposed.

© Mouchel 2016

Figure 10C 1 Local Landscape Character Sub Zones



Character Zones and Character Sub Zones

LCZ 1 – Lower Foyle Valley

LCSZ 1.1 – New Buildings and Ballougry

LCSZ 1.2 – River Foyle Meander

LCSZ 1.3 - Burn Dennet and Glenmornan River Valleys

LCSZ 1.4 - Foyle Floodplain

LCSZ 1.1 – New Buildings and Balougry Hill

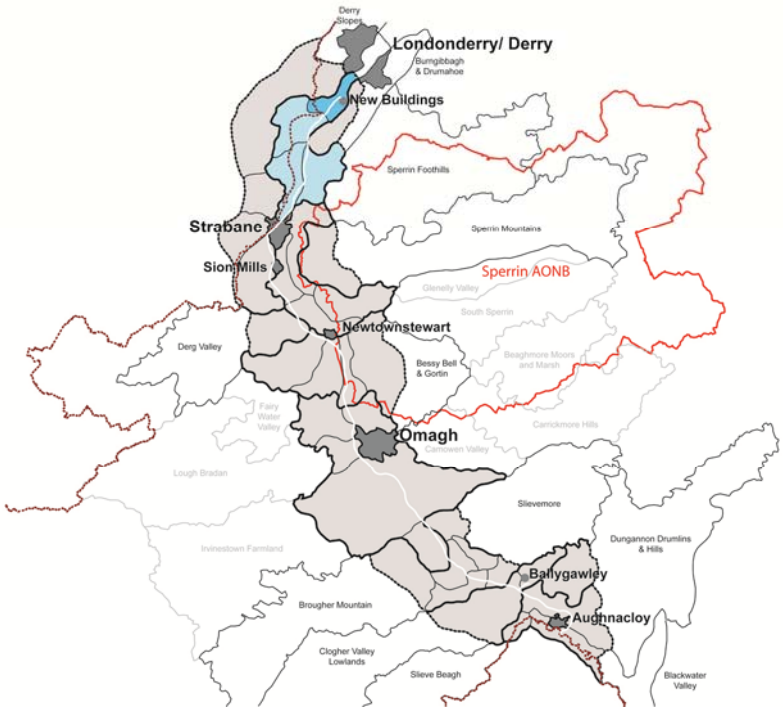

Plate 10C.1

View from the western margin of the River Foyle at Ballougry Hill, showing the setting of New Buildings and its relationship with the River Foyle.

Plate 10C.2

View west across Magheramason from Gortmonly Hill, look across the Foyle valley.

Plate 10C.3

View across the River Foyle towards New Buildings, from Ballougry Road.

Key Features:

- Undulating landform of low ridgelines broadly orientated in a south west – north east direction but broadly falling to the west towards the Foyle River
- Commonly pastoral land use comprising irregular shaped fields bounded by fragmented hedges with scattered hedgerow trees
- Scattered farmsteads with groups of mature trees in elevated locations
- Awareness of the river Foyle extending to the west and rising landform beyond
- Distinctive hill to the west of the River Foyle affording views across the river and the hills to the east.
- Much of zone designated as an Area of High Scenic Value (AoHSV)

Description

This character zone is dominated by the River Foyle as it flows to the north and marks the transition from countryside to urban settlement as the influence of Londonderry/Derry extends along the river banks to the south. The importance of this transition and the effect of urban pressures for development is highlighted by much of the zone being designated as an AoHSV in order to safeguard its quality and value as a landscape resource.

The majority of the zone is farmland comprising irregular shaped fields bounded by frequently fragmented hedgerows whilst woodland is limited to small copses commonly associated with farmsteads or large country houses, particularly to the west of the zone.

The landform rises sharply from the river banks particularly to the west of the River Foyle to form Ballougry Hill, these hills mark a transition from river valley to the uplands to the east and represent the north west extremities of the Sperrin range of mountains, although these hills are frequently interrupted by local watercourses that flow towards the River Foyle.

© Mouchel 2016

Settlements occur along the banks of the main river valley and mark the local break in slope from the river valley to local hills, New Buildings and Magheramason are representative of these settlements, linked by the existing A5, smaller settlements or clusters of properties occurring throughout the zone linked by a network of local roads and lanes.

Sensitivity to Change

The landscape represents a locally important landscape as a setting to the River Foyle and the approach to Londonderry/Derry from the south as a gateway into the city, part of the zone being designated at the local level as an AoHSV. The relatively strong vegetation framework would suggest that the zone has limited capacity to accommodate change. It is a high quality landscape with a value which is recognised at a county level by virtue of its designation in the Area Plan and which has a **high** sensitivity to change.

© Mouchel 2016

LCSZ 1.2 – River Foyle Meander

Plate 10C.4

View west across the River Foyle and marginal landscape.

Plate 10C.5

View from the existing A5 corridor, showing the shallow grade of landform and mixed hedge management.

© Mouchel 2016

Plate 10C.6

View from Black Hill, looking east across the Foyle towards Gortmonly Hill.

Key Features:

- Low lying landform of low drumlins and gentle ridgelines that are heavily influenced by the River Foyle as it flows through the zone
- Gently undulating landform of predominantly pastoral fields and scrubby hedgerows, becoming more heavily managed to the west
- Small settlements and scattered farmsteads typically occurring at the local break in landform, older properties occupying local high points along the low ridgelines
- Numerous local watercourses that drain to the east and flow into the Foyle
- Gently undulating slope from final and highest ridgeline to the bank of the Foyle

Description

The zone is defined by the Dooish mountains to the west, Holywell Hill to the north and Gortmonly Hill to the east and is represented by a relatively low lying landform that is heavily influenced by the wide River Foyle as it meanders between low hills and gently sloping ridgelines. Landform is less pronounced in comparison to the north and areas of the zone are represented by low lying floodplain and frequent land drains and small watercourses that extend across the landscape.

The majority of the land use is as farmland, predominantly pastoral although some arable farming takes place on the more fertile floodplains, fields are typically irregular and bounded by a variety of hedgerow forms, although these tend to become more fragmented to the edge of the zone as slopes rise and hedgerow management is less intensive. Woodland is generally sparse although some coniferous plantations to the west represent locally distinctive features.

In common with LCSZ 1.1 settlements typically occur at the local break in landform from floodplain to hill slopes and typically comprise small villages such as Coxtown, Tirrody and Bready, elsewhere scattered farmsteads and individual dwellings occur along an extensive network of local lanes bounded by hedgerows.

© Mouchel 2016

Sensitivity to Change

The area has a good landscape quality and local value, which has a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 1.3 – Burn Dennet and Glenmornan River Valleys

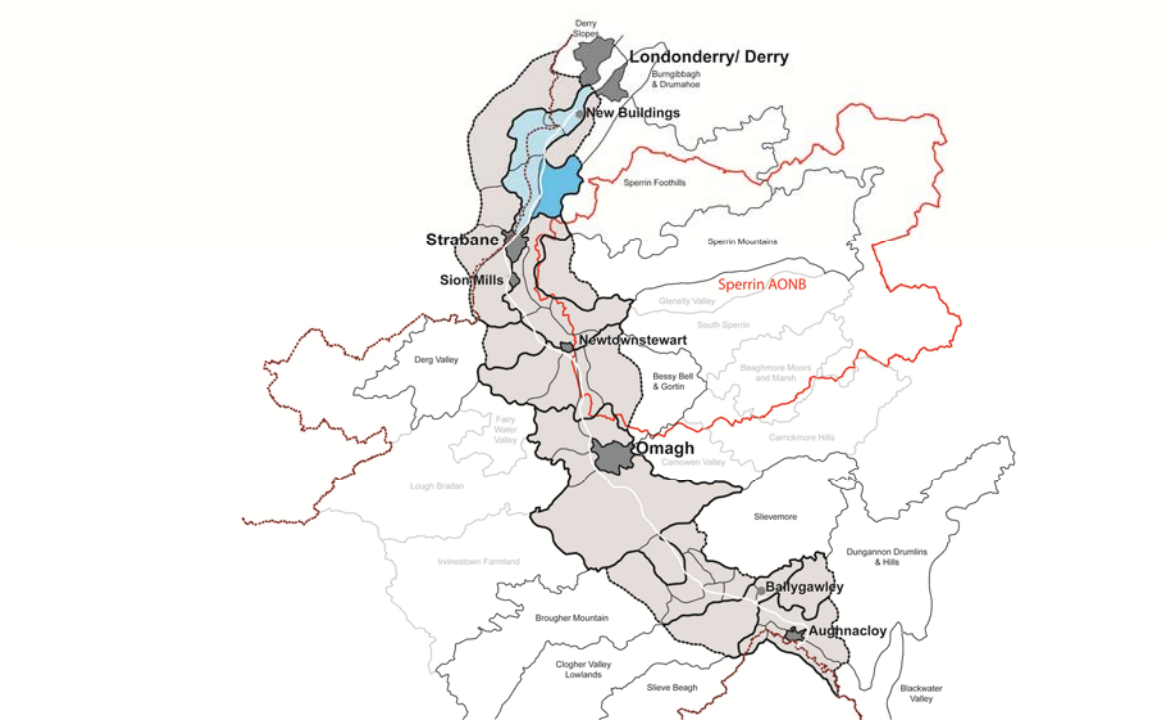

Plate 10C.7

The undulating landform and heavily managed landscape, comprising large fields and scattered farms.

Plate 10C.8

View of the River Dennet from the existing bridging point on the A5.

© Mouchel 2016

Plate 10C.9

View showing the setting of Artigarvan on the fringe of the Foyle valley.

Key Features:

- River valley bounded by a series of hills Gortmonly Hill to the north and Knockavoe to the south
- Contrast in land cover from woodland to open arable
- Represents a transition from river floodplain to upland hill forms
- Distinctive settlements feature on higher ground
- Fields typically comprise pasture bounded by managed and unmanaged hedgerow

Description

This zone represents the most distinctive of the river valleys that flow towards the River Foyle to the west, the River Dennet and Glenmornan are wooded watercourses that gradually descend from the higher slopes to the east and flow west across the floodplains that form LCSZ 1.4.

The northern and southern edges of the zone is represented by a more open landscape featuring an open field pattern and bounded by a coherent hedgerow pattern that rises on the bounding hill slopes, tree cover is relatively sparse on the higher ground becoming increasingly common in association with the river corridors. Hedgerows typically become less heavily managed in association with the fringes of the settlements and water courses creating an impression of a wooded landscape.

The settlement pattern is varied, the higher slopes feature only scattered farmsteads and dwellings, these small clusters gradually become more frequent in association with the watercourses and the settlements of Ballymagorry and Artigarvan that represent two of the largest settlements between New Buildings and Strabane.

Within the zone extraction of sand and gravel activities occur although these are generally well concealed and have a limited influence on the perception of the wider landscape as an attractive wooded river valley

© Mouchel 2016

Sensitivity to Change

The area has a good landscape quality and local value which has a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 1.4 – Foyle Floodplain

Plate 10C.10

View across Grange Foyle from the existing A5, the village of Bready visible to the right set below Gortmonly Hill.

Plate 10C.11

View from within Grange Foyle showing the large rectilinear field pattern, bounded by open ditches; The Grange plantation is visible to the right and Knockavoe Hill in the distance.

© Mouchel 2016

Plate 10C.12

View across the broad floodplain west of the River Foyle, the distant hills being the western fringes of the Sperrin mountain range.

Key Features:

- Low lying landform, heavily drained by a network of man made ditches and local watercourses
- Distinctive former canal route now serves as a recreational opportunity
- Medium sized fields that are typically improved, in a geometric pattern that become less regular and smaller to the south and west, typically bounded by managed hedgerows and fence lines
- Flood defences screen local rivers and Foyle to the west
- Pockets of rough pasture with extensive areas of marsh and wet woodland.

Description

The dominant feature of this zone is the relatively low lying and flat landform that represents the floodplain of the Foyle as it flows through the zone. The zone has been influenced by man for centuries and features a network of rectilinear drainage ditches that form the boundaries to the broadly geometric field pattern. From within the zone the river is a discrete feature, rarely visible bounded by large berms that form local flood defences.

To the east of the River Foyle and south of the confluence with the River Dennet this strong field pattern breaks and fields become less geometric although the underlying landform remains as the unifying feature. Fields are generally used as pasture although areas to the east and on slightly higher and better drained ground are under arable regimes. West of the Foyle the influence of the Swilly Burn as it flows to the east is equally marked by a low lying landform and managed hedgerows and fence lines that gradually break and give rise to a less coherent landscape on the edge of the zone.

Settlement is very limited, small clusters of properties occupy slightly elevated ground or occur to the edge of the zone and the influence of the floodplain. The network of local roads become more sparse than in adjoining areas, typically flanked by deep drainage ditches and fragmented hedgerows.

© Mouchel 2016

The extensive wet woodland associated with McKean's Moss and the woodland associated with the route of the former Strabane Canal create a landscape that is varied in its woodland cover, becoming more extensive to the south of the zone, to the north small copses do occur, commonly marking older farmsteads, elsewhere plantations have been created and their geometric shapes represent distinctive features within the wider landscape, this is particularly evident around The Grange.

Sensitivity to Change

The area has a good landscape quality and local value which has a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 2.1 – Gortmonly Hill

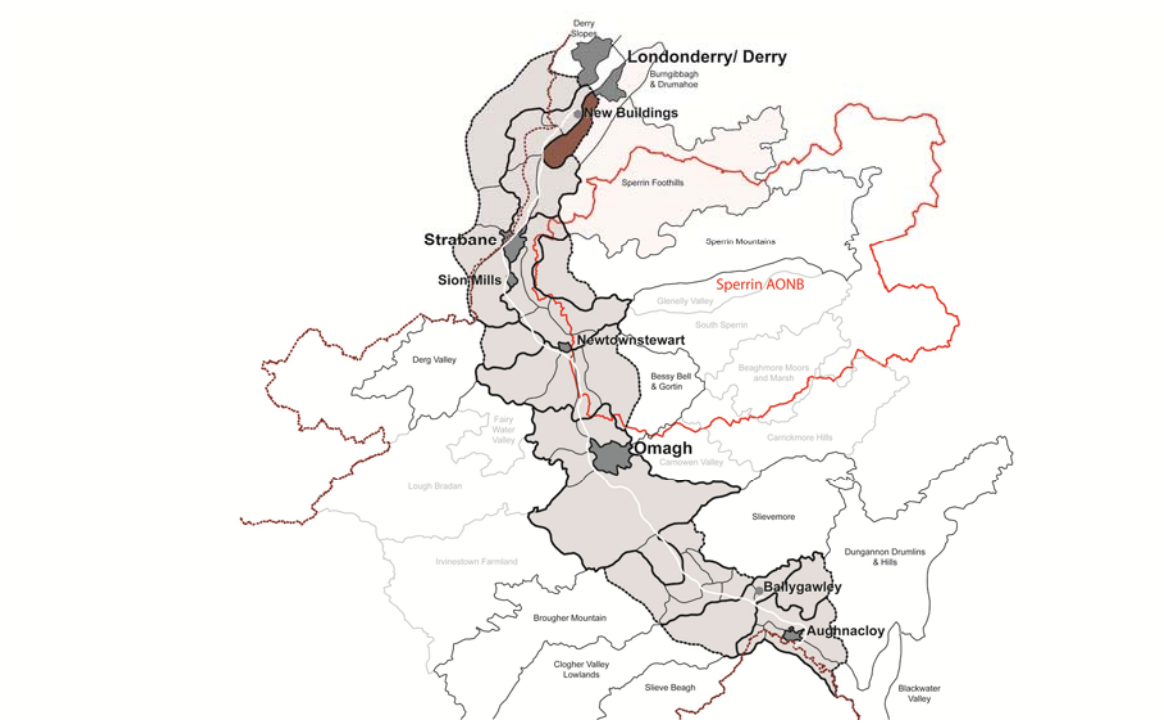

Plate 10C.13

View of the southern profile of Gortmonly Hill to the east of Bready.

Plate 10C.14

The elevated western edge of Gortmonly Hill and local road running northwards.

© Mouchel 2016

Plate 10C.15

The crest line of Gortmonly Hill viewed in the context of the higher Sperrin hills.

Key Features:

- Locally distinctive hill rising to the south to form a local ridgeline feature
- Irregular shaped fields of medium sized and managed as improved pasture, bounded typically by managed hedges on lower slopes, larger fields to the south used as arable fields with winter grazing.
- Small copses of broadleaf trees associated with farmsteads, locally significant woodland on steeper escarpment slope to the south
- Numerous telegraph poles and single telecommunication mast
- Scattered farmsteads to mid slopes

Description

The character zone is defined by the locally distinctive Gortmonly Hill that comprises an undulating ridgeline that gradually descends forming two less well defined ridgeline to the north in the direction of the village of Magheramason and which occupies the northern extremity of the zone. The ridgeline is visible at some distance to the south and overlooks the River Dennet valley as it extends to the west.

The zone features irregular shaped fields comprising mainly improved pasture bounded by managed hedgerows on lower slopes gradually becoming less continuous to the summit where fence lines and a mix of remnant hedgerow hawthorns define the boundaries. Trees are generally sparsely scattered through the hedgerows although a locally distinctive area of woodland occupies the steepest part of the southern slopes. Small patches of gorse on the thinner soils form several clumps of vegetation along this southern boundary.

Settlement is broadly contained to the lower slopes to the south and west of the zone and generally comprises scattered farmsteads and dwellings set along single track lanes and access tracks that steeply rise from the lower slopes and continue along the spine of the ridgeline before descending to link with the wider road network. The existing A5 passes to the west and from these westerly slopes traffic movements are clearly visible from the local roads and several dwellings within the zone.

© Mouchel 2016

Sensitivity to Change

The area has a good landscape quality and is of local value. Due its geographical location and accordingly low capacity to accommodate change of the type proposed, it is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ 3.1 – Binnion & Black Hill

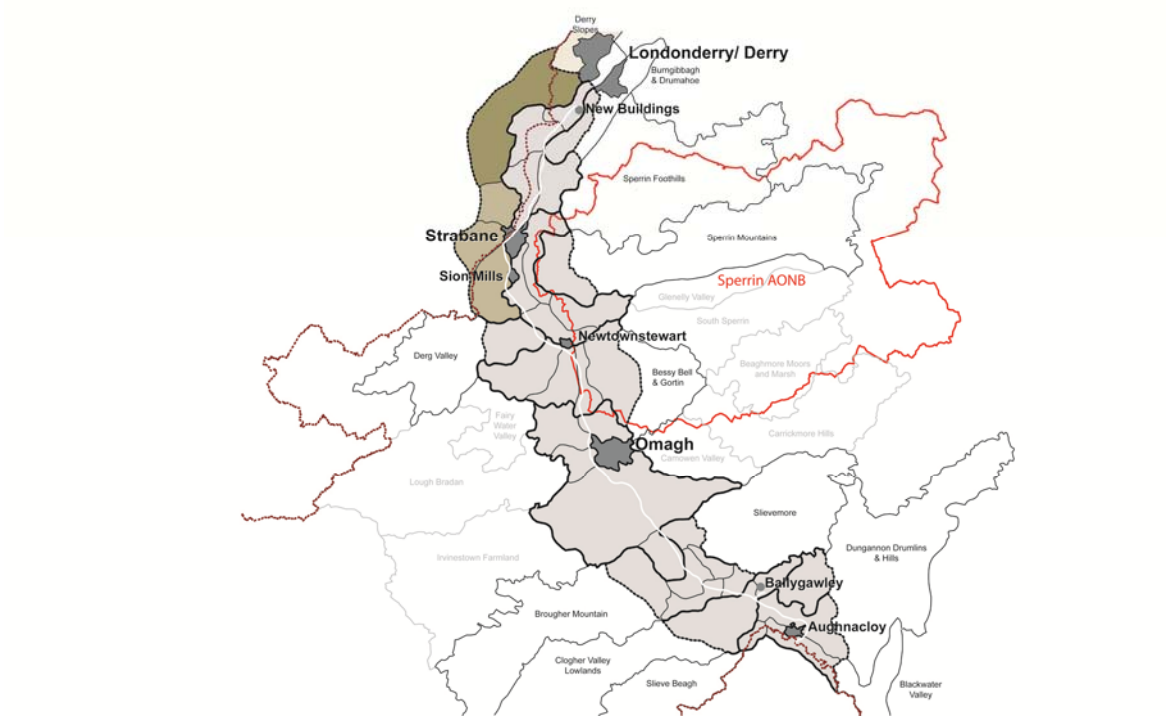

Plate 10C.16

The undulating nature of the higher ground west of the Foyle valley.

Plate 10C.17

The mixture of arable and pastoral agricultural use.

© Mouchel 2016

Plate 10C.18

View of the rounded hill slopes that define Binnion Hill and Black Hill.

Key Features:

- Discreet upland areas formed by a series of low hills – the highest being Binnion Hill
- Area of farmland, typically pasture on the higher slopes and arable occurring on gentler slopes between hill forms
- Few visual detractors with only scattered settlement linked by a network of local roads and narrow lanes
- Some elevated views from hills of the Foyle Valley with others to the north contained and focused by the surrounding landforms

Description

An upland area comprising a series of hills and hill slopes that creates a series of undulations fringed by Binnion Hill to the south east and the larger hills of Dooish Mountain that dominates the skyline to the north. The landform itself is gently rolling and open in character gradually becoming increasingly undulating to the north and west of the zone and the transition into a more upland character at the foot of Dooish Mountain.

Farmland dominates throughout with occasional plantations forming noticeable dark geometric features lying across the slopes. Land use is a mixture of improved pasture to the steeper slopes with arable crops grown on the flatter sections. Fields are predominantly medium to large, bounded by hedges with occasional fence lines.

Settlement is sparse throughout, with the exception of the R236 where scattered farms and dwellings create a slightly more settled character. Telegraph poles interrupt the landscape along local lanes that pass through the elevated valleys; the exception is the R236 that heads west, although its twisting nature broadly reflects local landform and as a result has not modified the zone. Vegetation is limited to areas of scrub or outgrown hedges where they remain unmanaged.

© Mouchel 2016

Sensitivity to Change

The area has a good landscape quality and of local value. Due its geographical location and limited capacity to accommodate change of the type proposed, it is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ 3.2 – Cavan & Dromore Hills

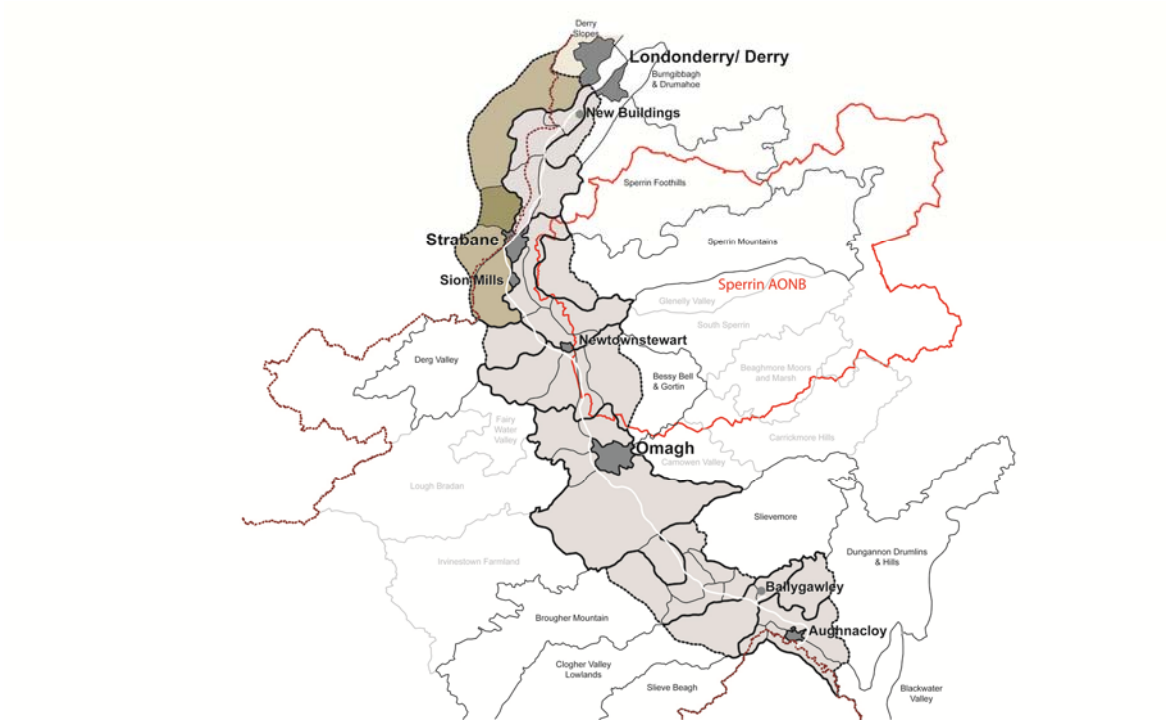

Plate 10C.19

View across the Swilly Burn floodplain.

Plate 10C.20

The context of the Foyle landscape viewed from Dromore Hill.

© Mouchel 2016

Plate 10C.21

View across elevated, shallow farmland typical of the character zone.

Key Features:

- Series of low defined hills fringed by watercourses on three sides
- Settled throughout and linked by a network of lanes and tracks
- Main N14 highway cuts through the zone and is a noticeable feature
- Elevation above low lying floodplain and larger hills to the north and south
- Regular field pattern bounded by hedgerows and frequent clumps of trees

Description

The zone is formed by a series of low hills, at an elevation of between 10-80m AOD and isolated from the more extensive hills to the south by the Deel River valley. The hills themselves are a number of low rounded landforms that create a transition between the floodplain and the larger land masses to the south.

Land use is almost entirely agricultural with the majority of the land laid to pasture, fields are typically of regular shape and medium in size and bounded by hedgerows with occasional mature hedgerow trees. These trees combine with several areas of scrub and small woodlands to create a sense of the zone being partially wooded, although awareness of the larger surrounding hills remains.

The zone is settled throughout by a network of lanes and local roads however the main N14 traverses the zone between local high points and forms the main visual detractor. Development comprises farmsteads and dwellings set alongside these local roads and many are afforded attractive views across the adjacent areas to the north and south.

Sensitivity to Change

The area is of unremarkable landscape quality and local value. Due its geographical location and limited capacity to accommodate change of the type proposed, it is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ 3.3 – Croaghan Hill

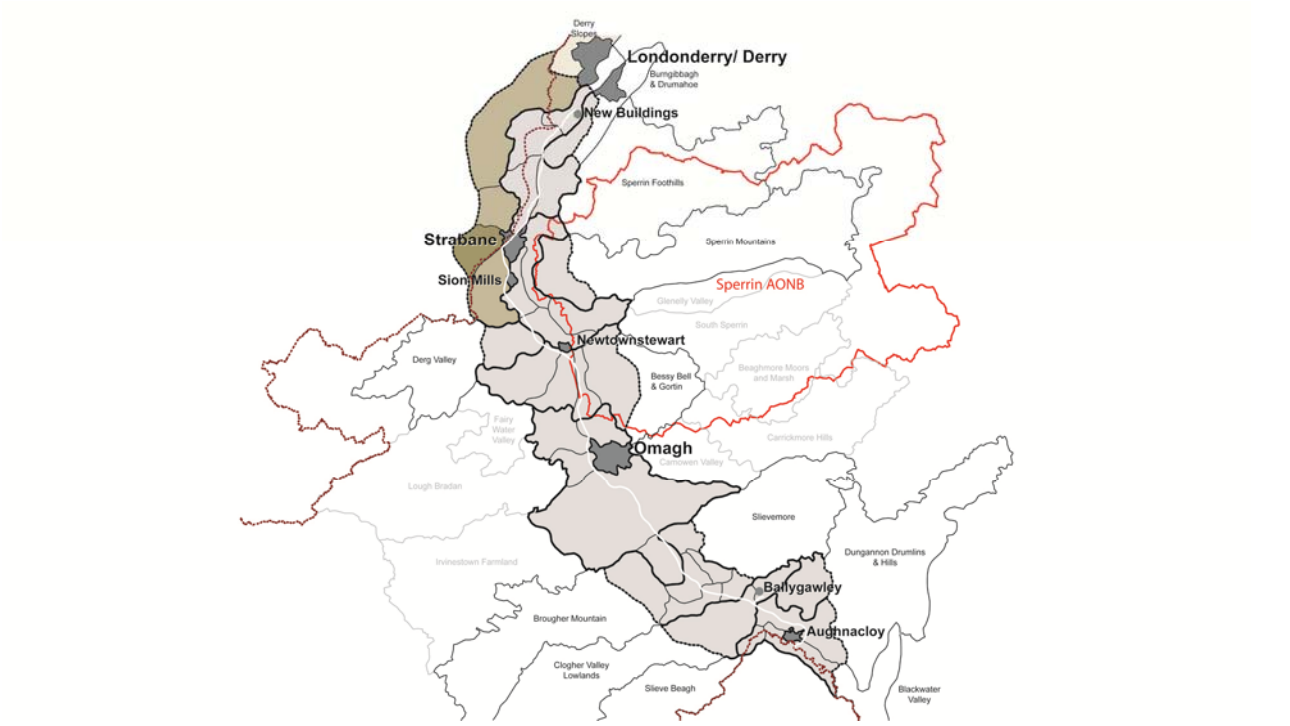

Plate 10C.22

The rolling hill profiles and irregular field pattern typical of the character zone; the small plantations to the summit of Craigtown Hill are visible to the right.

Plate 10C.23

The summit of Croaghan Hill when viewed from the north.

© Mouchel 2016

Plate 10C.24

View towards the unenclosed summit of Croaghan Hill, with the outgrown form of local field boundary hedgerows.

Key Features:

- Discreet upland valley landform
- Summits form a distinctive humped ridgeline visible at some distance from the north and west across the Finn River and Foyle Valleys
- Forms a dramatic backdrop to the town of Lifford when viewed from the east
- Extensive network of hedges linking to small wood and scrubby copses
- Fields of medium size and irregularly shaped are bounded by hedges with scattered trees
- Land use predominantly pasture with arable occurring to the lower slopes
- Development is sparse and comprises scattered farmsteads and isolated dwellings

Description

The zone is dominated by the summit of Croaghan Hill, the distinctive hill form providing a dramatic backdrop to the town of Lifford, the N15 and Finn River providing the south east boundary, whilst the Deel River valley complex creating a distinctive boundary with the hills to the north. The hill itself forms a gently undulating horizon when viewed from the north, its summit lying above 200m AOD it forms one of the highest points immediately west of the Foyle valley complex and reflects the hill form to the east of Knockavoe. Two smaller hills to the south west of Croaghan Hill, Craigtown and Crossy Hill form foothills to the main landform and are included in the zone.

Away from the N15 land use is largely agricultural although some areas of forestry exist to the south of the zone in association with Crossy Hill. The remainder is largely pasture although to the north of the zone and on the lower slopes are some areas of arable land use. Fields are typically irregular and bounded by an extensive network of hedgerows, intermittent in places and on higher slopes becoming increasingly scrubby and gappy.

Settlement is limited to the mid and lower slopes and is commonly associated with a series of local lanes that circumvent the local summits. It is from these local lanes to the north of the zone that expansive views are afforded along the Foyle valley and encompassing a number of the local character zones.

© Mouchel 2016

Sensitivity to Change

The area has a good landscape quality and local value. Due its geographical location and its limited capacity to accommodate change of the type proposed, it is considered to have a high sensitivity to change.

© Mouchel 2016

LCSZ 3.4 – Southern Lifford Hills

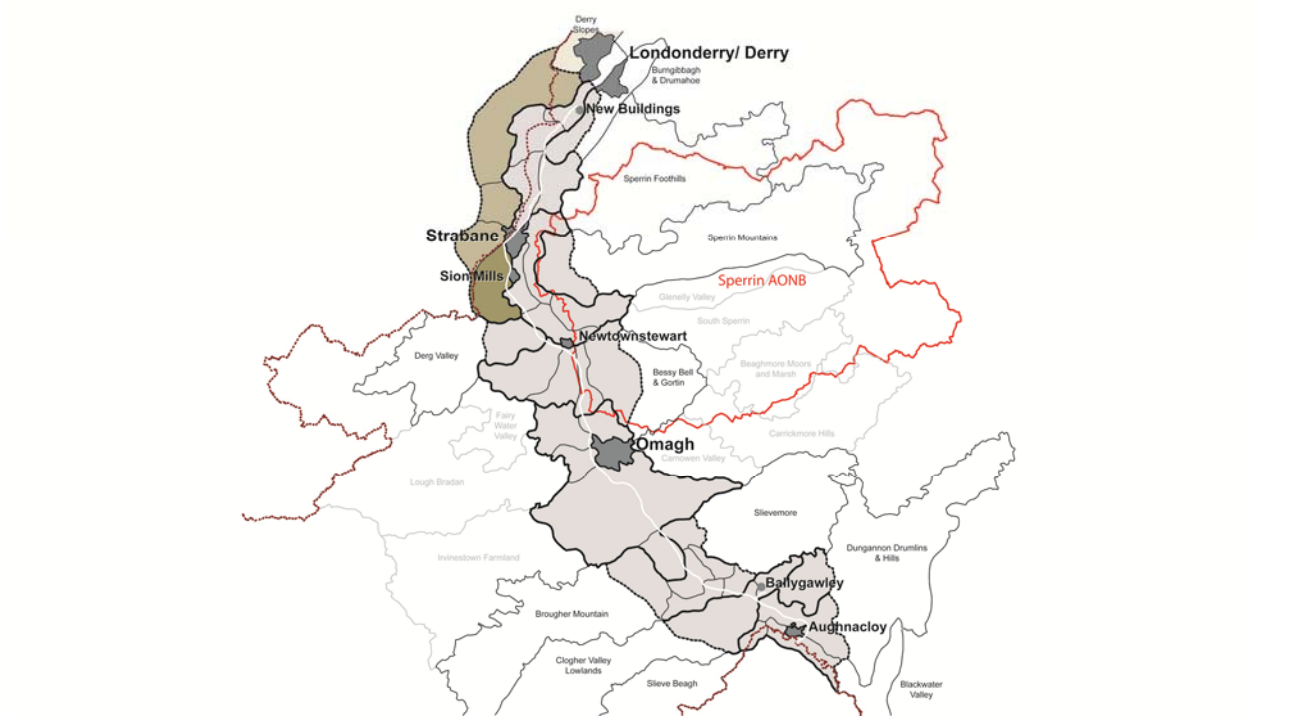

Plate 10C.25

View across the open and rolling nature of the landform, the unmanaged hedgerows and improved pastures with scattered copses.

Plate 10C.26

Distant views east towards the Sperrin Hills provide a backdrop at local rises in landform, increasing the sense of openness and place.

© Mouchel 2016

Plate 10C.27

Winding local lanes and unmanaged hedgerows are typical of the locality.

Key Features:

- Gently rolling upland landform with a high proportion of blanket bogs and moorland
- Pastoral land use bounded by overgrown hedges or mixture of gorse, heather and shrubs
- Broad views to the east afforded from local rises in landform however little visual awareness of nearby conurbations
- Occasional birch wooded copses commonly associated with bogs and generally low proportion of woodland cover

Description

This character area is situated on land rising from the Mourne River valley to the west and lies immediately to the north of the Derg Valley landscape, constituting the hills of Whisker, Urney and Fearn to which the landform gently rises. It is bordered by large rivers to the north, east and south, although these are not prominent features from the area, and is characterised on higher ground by a rolling landform with numerous blanket bogs and areas of moorland. Extended, irregular shaped drumlin moraine become apparent on the lower slopes of the broad hill masses as they drop into the surrounding valleys.

The generally open pastoral farmland consists of predominantly improved grassland and larger fields to the higher, open ground with broken hedgerow boundaries to the summits and areas of blanket bog. Slopes leading into the surrounding river valleys contain a variety of field patterns and smaller, more intimate fields typically associated with large farmsteads. Hedgerows are generally unmanaged, often associated with blanket bogs in the upland areas where maintenance is more difficult, with frequent hedgerow trees. On the higher ground there are extensive patches of marsh and open moorland with a small proportion of woodland cover across the character area, fenced field boundaries become more apparent in these areas. What little woodland there is occurs with small privately owned copses and pockets of self sown birch with its distinctive white bark, associated with the blanket bogs. The higher ground is characterised by hedges consisting of gorse, heather and interspersed shrubs with few hedgerow trees resulting in an open feel to the landscape and broad views to the east at localised high points in the landform.

© Mouchel 2016

The area consists of small local roads and lanes connecting villages and towns in the adjacent valleys over the hills, particularly the towns of Castlederg and Ardstraw to the south with Sion Mills, Glebe and Clady to the north of the zone. The villages have little visual influence over the area with views to the conurbations intermittent and rare due to the rolling landform and overgrown hedgerows. As a result the zone feels fairly isolated and exposed for the most part with only scattered farmsteads settled in dips in the landform. Distinctive tree rings are also visible on occasional localised high points in landform, signifying the presence of Raths.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and local value. However due its geographical location and limited capacity to accommodate change of the type proposed, it is considered to have a **high** sensitivity to change.

LCSZ 4.1 – Knockavoe & Meenashesk Hill Slopes

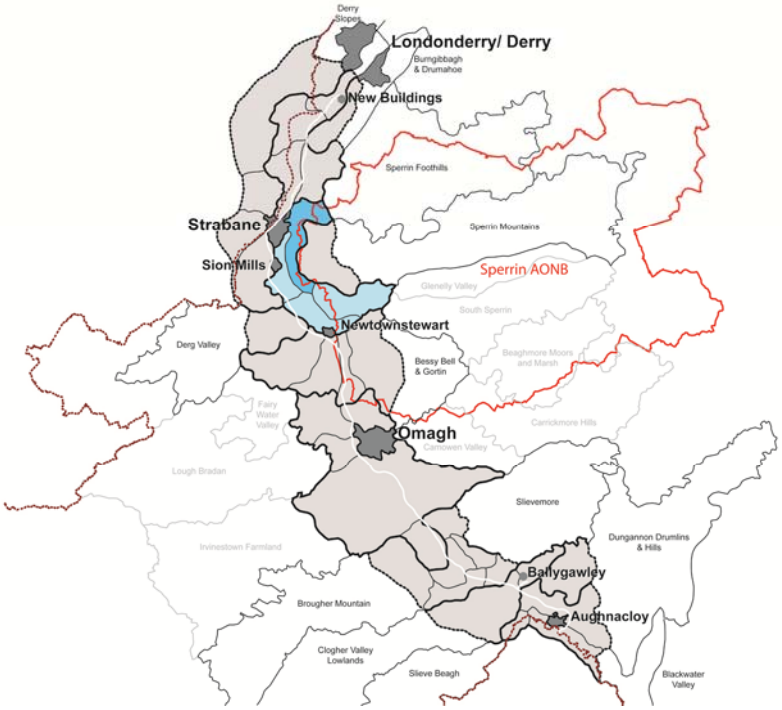

Plate 10C.28

View west from the flank of Knockavoe Hill above Strabane, the woodland of Strabane Glen visible in the middle distance.

Plate 10C.29

The elevated and undulating landform above Strabane to the east of the town, where new development encroaches on farmland.

Plate 10C.30

The expansive views afforded of the Mourne Valley from the Meenashesk hill slopes.

Key Features:

- Steeply sloping farmland forming transition between the Foyle valley and Sperrin mountains
- Cohesive landscape framework of irregularly shaped fields bounded by hedges that vary in form and management
- Distinctive glens between the rounded slopes that feature dense woodland and areas of marshy grassland
- Telegraph and power overhead lines run along the slopes
- Scattered settlement throughout with farmsteads and dwellings, typically with expansive views along the Foyle valley.

Description

Defined by a distinctive landform this character zone forms a transition between the open moorland of Knockavoe and Meenshesk to the east and the Foyle valley to the west. The resulting steeply sloping farmland is typically improved pasture contained by low hedgerows of windblown hawthorn and patches of gorse, these are generally managed towards the north of the zone but become less continuous and unmanaged towards the south.

The zone is crossed by several lanes that broadly reflect local contours and that link several farmsteads and isolated dwellings that are afforded open and expansive views across Strabane and the Foyle valley. Overhead power lines occur throughout the zone resulting in locally

© Mouchel 2016

noticeable visual detractors. Within the zone are several wooded glens that form distinctive features at the local level. These appear as areas of woodland although they also contain areas of marshy grassland and sedges.

The zone forms a distinctive setting to the town of Strabane, the steep slopes giving a backdrop to the town when viewed from the west, extending from the north along the rounded slopes to the south of the town where the slopes ease to form the Mourne River valley.

Sensitivity to Change

The area has a good landscape quality and local though potentially county value. Due its geographical location and accordingly low capacity to accommodate change of the type proposed, it is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ 4.2 – Enclosed Mourne River Valley

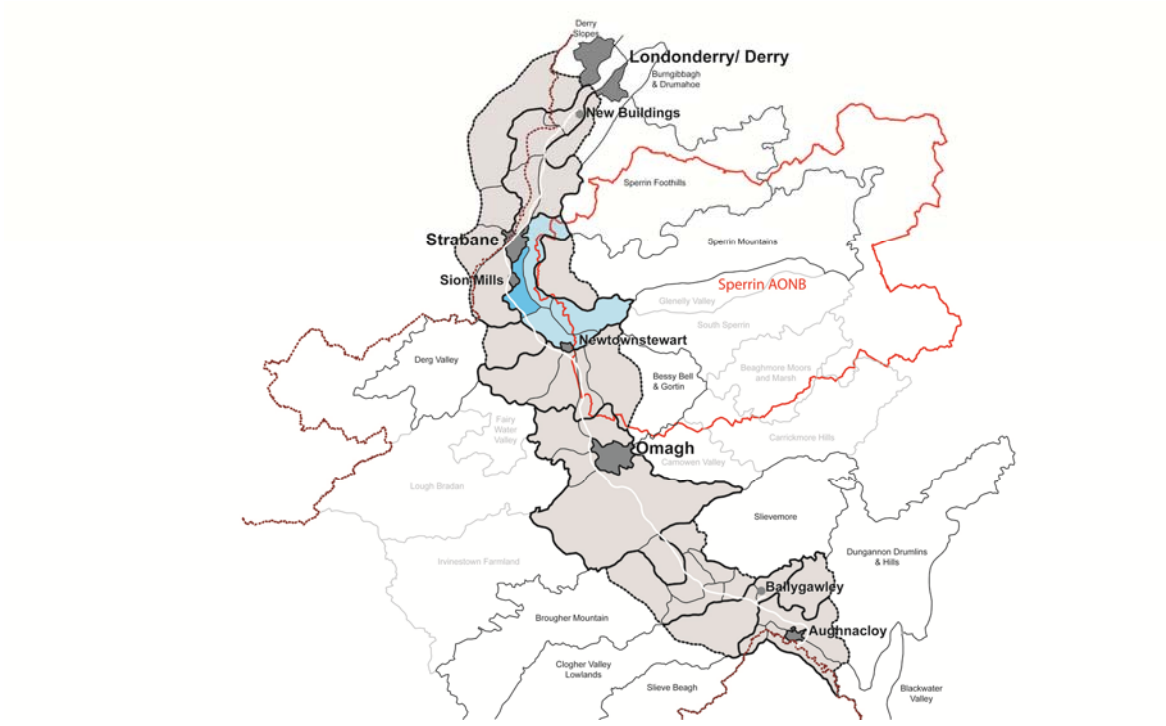

Plate 10C.31

View across the Mourne valley from the east, across the local floodplain. The wooded and populated river margin sits below Tullywhisker Hill and the higher, with the distant slopes of Bessy Bell providing the backdrop.

Plate 10C.32

The context of Sion Mills from the west.

© Mouchel 2016

Plate 10C.33

View across the Mourne valley from the west, towards the hill mass of Meenashesk and its coniferous plantations.

Key Features:

- Narrow river valley with steep valley sides in places
- Victoria Bridge, Sion Mills and the A5 are dominant urban features
- Industrial heritage clearly evident
- Surrounding hills contain views
- Belts of mature woodland and broken hedgerows
-

Description

The character area is to be found between Sion Mills and Victoria Bridge and is dominated and overseen by these two conurbations developed along the western banks of the Mourne River corridor. The valley continues from the open floodplain character to the south with both Clady and Gillygromes Hills marking the beginning of the narrower valley as they squeeze the Mourne into forming steeper valley sides to the north. An appreciation of Sion Mills and Victoria Bridge exist throughout the area. Large mill buildings on the river banks, stone bridges, a dismantled railway and the architecture of the two towns mark and distinguish the industrial heritage of the area. The two towns historically formed and expanded on the river, utilising it as a transport corridor. Broad hill masses leading up to Whisker Hill and Tearn Hill to the west of the corridor are dominant and consist predominantly of rolling pastoral farmland, the rolling foothills of the western Sperrins enclose the valley to the east with the large coniferous plantation on the slopes of Meenashesk prominent.

Victoria Bridge is generally surrounded by fields with broken boundaries while to the west of the existing A5 corridor irregular shaped fields following the landform are typical. Fields are more regular to the east of the Mourne River within localised floodplains. Hedgerows are unmanaged and overgrown generally with few hedgerow trees. Dense belts of mature deciduous woodland follow the rivers path. Views are generally focussed along the river corridor, being contained by urban elements and surrounding hill masses. The character zone is settled with the two towns of

© Mouchel 2016

Sion Mills and Victoria Bridge, dwellings and local businesses following the existing A5 and numerous local roads follow the valley or cut down from the hills.

Sensitivity to Change

The character zone is considered to be of good quality and local though potentially county value**. T**he context of settlement, transport corridors and high proportion of mature woodland following the valley would suggest a capacity to accommodate change of the type proposed. The sensitivity to change to the type of development proposed is considered to be in the order of **moderate.**

© Mouchel 2016

LCSZ 4.3 – Newtownstewart Floodplain

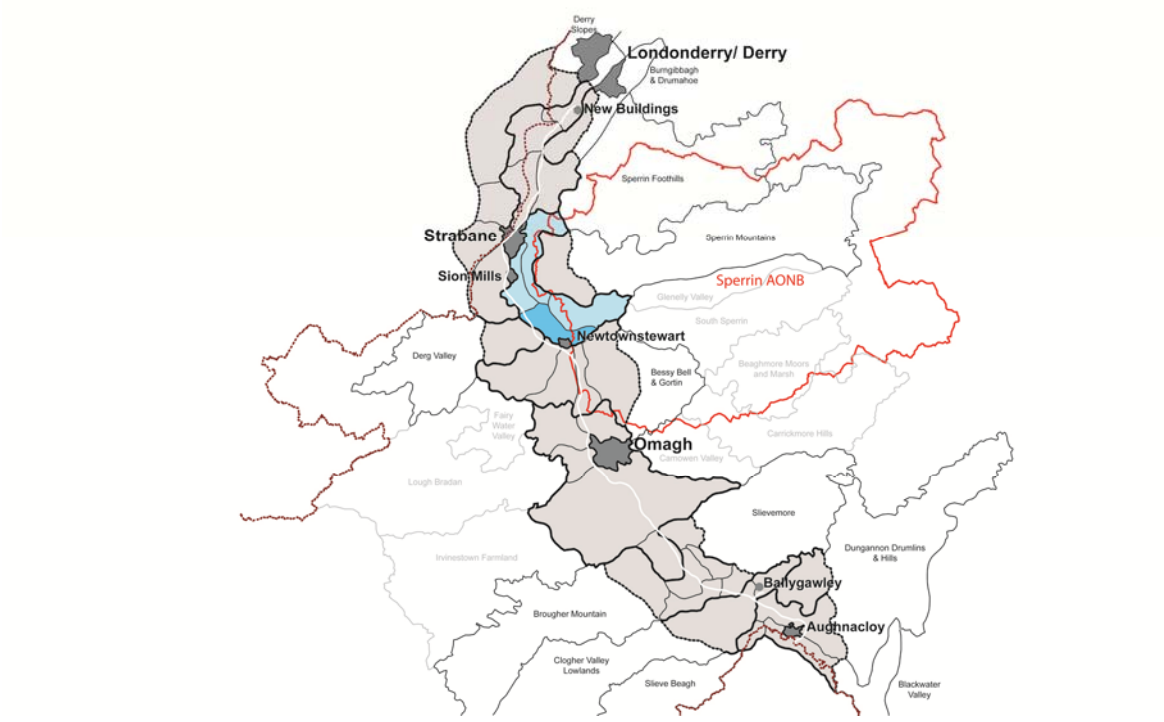

Plate 10C.34

View across the floodplain east of Newtownstewart, at the confluence of the rivers Strule and Owenkillew. Bessy Bell forms a distant backdrop.

Plate 10C.35

View towards Newtownstewart from the River Strule at its confluence with the Owenkillew River; the profile of Harry Avery's Castle and the more distant form of Bessy Bell form the background context.

© Mouchel 2016

Plate 10C.36

View from the Strule floodplain north of Newtownstewart, showing the glacial moraines and coniferous plantations that border the valley and which define the limit of the character zone.

Key Features:

- Broad, flat river valley and low lying flood plain to the east of Newtownstewart with broadly rolling valleys extending away from this area
- Broad views contained by surrounding hills
- River systems are dominant features in the landscape, particularly the River Strule
- Settlement of Newtownstewart prominent visually, creating more of an urban feel in the south
- Large pastoral fields with intermittent hedgerow trees, low proportion of woodland cover and occasional arable practices
-

Description

This zone is located between Newtownstewart and Victoria Bridge, bordered by the B165 to Douglas Bridge to the east with the town of Ardstraw on the Derg River just beyond the zones western border. Characterised by the confluence of the river systems of the rivers Strule, Derg, Owenkillew, Douglas Burn and numerous small tributaries and associated floodplain. The broad U shaped valley is enclosed by four large hill masses where from the gently rolling valleys lead away from this low lying landscape in all directions within the zone. The low lying landform to the east of Newtownstewart in combination with the rolling valleys to the north and south and broadly meandering river systems act as strong features within this landscape. This is emphasised by relatively few hedgerow trees, broken hedgerows and low proportion of woodland cover, creating an open feel to the landscape. The eastern extents of the zone lie within the Sperrin AONB as the landform sweeps up gently onto the lower foothills. The Derg Valley lies to the west within which the Baronscourt estate and associated plantations on the slopes of Bessy Bell are visible to the south west. An irregularly shaped belt of glacial til and moraine mounds to the west of Newtownstewart are a distinctive local landmark and mark the zones boundary. Nutrient rich soils deposited by the meandering river and flat landform near Newtownstewart has resulted in arable farming practices, this is out of character within the wider study corridor which is predominantly

© Mouchel 2016

improved pasture. Medium to large improved, pastoral fields are enclosed by a high proportion of managed hedgerows with a variety of field patterns.

The settlement of Newtownstewart sits on the valley floor at the confluence of the Strule and the Owenkillew rivers and, along with local transport routes, has utilised the broad valley for historical transport and trade. Urban features are clearly visible in the landscape surrounding the town and form prominent features in the skyline. The existing A5 corridor forms the major arterial route of the area from which local lanes and small roads lead up to the Sperrin lower slopes where settlement is scattered.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of unremarkable quality and local value. It is considered to have a sensitivity to change to the type of development proposed in the order of **moderate**.

© Mouchel 2016

LCSZ 4.4 – Owenkillew Valley & Plateau Bogs

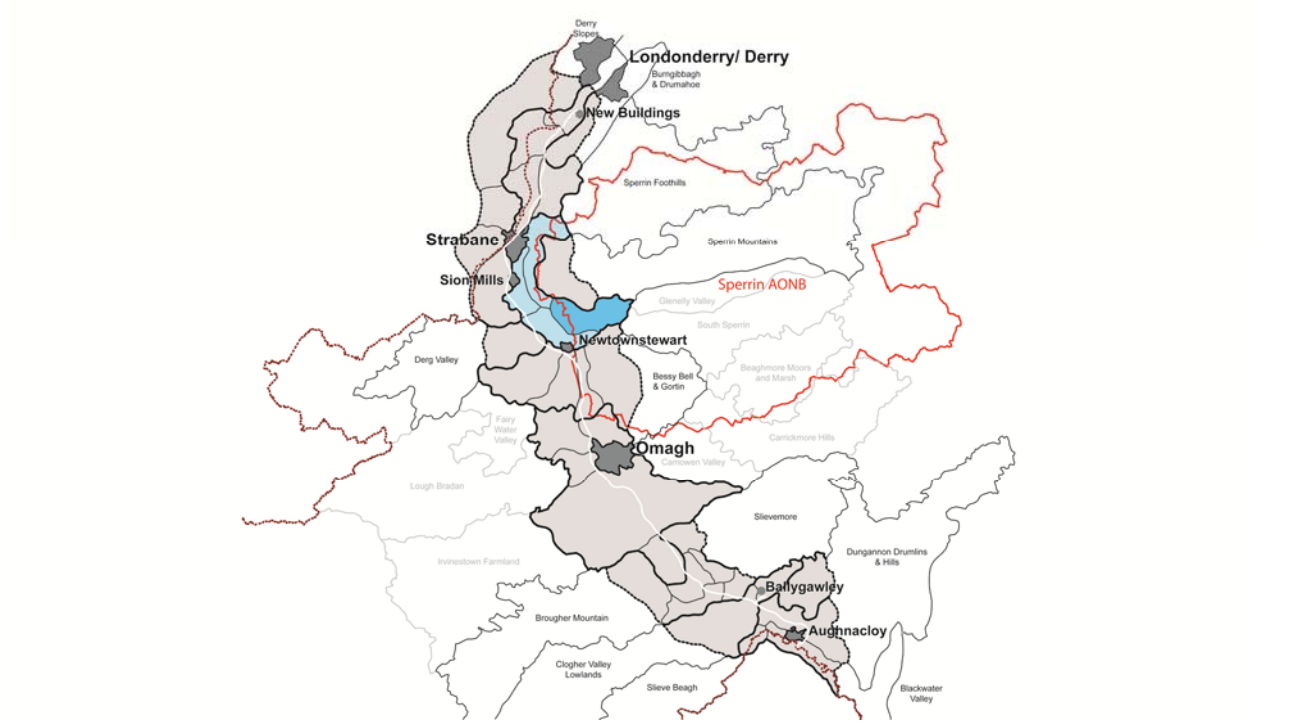

Plate 10C.37

View across intermittent, extended drumlins, with unmanaged broken hedgerows and rough pasture.

Plate 10C.38

View across an area of raised bog, with heather and rough grassland.

© Mouchel 2016

Plate 10C.39

A broad area of raised bog with acid grassland and heather, few trees and broken field boundaries. Pastoral fields are more intermittent in the character zone, giving a wild feel to the landscape.

Key Features:

- High proportion of raised bogs and wet flushes within broad, plateaued areas of moorland and acid grassland
- Extended views to the Sperrins due to low hedgerows and few hedgerow trees on higher ground
- Farming less dominant than other areas due to the bogs and flushes, resulting in unmanaged vegetation and a wild appearance
- Scattered settlement and narrow local roads with occasional copses on lower ground

Description

This character area is located south of the western fringes of the Sperrins, nestling in the higher ground to the east of Newtownstewart and Douglas Bridge containing the Owenkillew River Valley. The landform rises up steeply to the north from the Owenkillew River, onto a rolling plateau landscape that gently and very broadly rises to and is enclosed by the hill masses and summits of Meenashesk, Craigatuke and Cruckaclady to the north and Slievemore to the east.

The zone is characterised by treed farmland with broken, low drumlin formations and rough pasture, there is a large proportion of raised bogs and wet flushes sitting with moorland and acid grassland on broad areas of plateau landform sitting below the surrounding hill masses. Vegetation on higher ground is typified by moorland heather, gorse and sedges in the hollows between intermittent drumlins. The character zone is generally heavily vegetated with typically extended, irregularly spaced drumlins on the higher ground and numerous long, narrow and winding tributaries flowing from surrounding summits towards the Owenkillew River. The Owenkillew valley landscape in the south of the character area is not distinctive and represents a transitional area with the surrounding hills. Field patterns are predominantly irregular and large in size and there is a high proportion of broken field boundaries to the north of the zone with fencing and gorse on the boundaries visually prominent. Hedgerows are generally unmanaged and on higher ground the landscape opens out due to numerous large areas of raised bogs and few hedgerow trees,

© Mouchel 2016

together with the unmanaged hedgerows and high proportion of gorse and heather, results in an exposed, wild character to the landscape.

There is an awareness of the Sperrins from the zone with distant, open views afforded due to, low hedgerows and few hedgerow trees as well as the rolling landform with broken, intermittent and extended drumlin formations. Copses typically associated with raised bogs are characterised by self sown birch. The northern half of the character area is sparsely settled with few farmsteads or roads, properties in the zone tend to follow the river valley in the southern extents. Small, local roads follow terraces on the outer edge of the valley floor or on lower valley slopes.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and of national value**. T**he large area of upland bogs, wild nature and expansive views towards the Sperrins would suggest a limited capacity to accommodate change of the type proposed. The sensitivity to change to the type of development proposed is considered to be in the order of **high**.

© Mouchel 2016

LCSZ 5.1 – Derg Valley Farmland

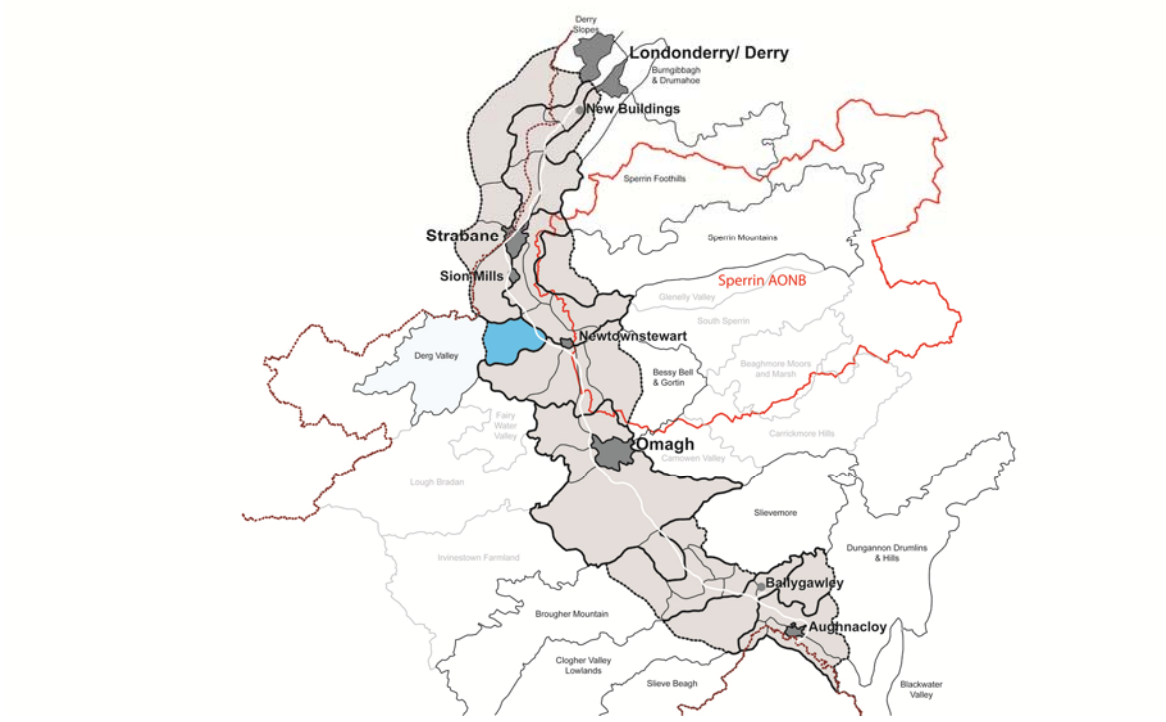

Plate 10C.40

Broad view south from Ardstraw across gently rolling pastoral farmland with low, heavily managed hedgerows and few trees.

Plate 10C.41

Isolated, large properties are scattered throughout the pastoral farmland. The field pattern is large, with generally well managed hedgerows and occasional copses.

© Mouchel 2016

Plate 10C.42

View across the gently rolling landscape to the west of Ardstraw. Open farmland is characteristic, with managed hedgerows and few hedgerow trees.

Key Features:

- Broad, gently rolling river valley with shallow valley sides
- Large arable fields and dairy herds are in contrast to the surrounding landscape
- Well managed hedgerows and little woodland cover, allowing for broad views across the landscape
- Occasional wooded outcrops generally associated with farmsteads
- Scattered villages on lower valley sides
-

Description

The character zone is located in the valley of the Derg River, to the west of the existing A5 corridor, between Victoria Bridge and Newtownstewart. The broad, gently rolling landscape with shallow valley sides is enclosed by the large, undulating hill mass of Tullywhisker to the north and Bessy Bell to the south with distant views of the Sperrins to the east. The town of Ardstraw on the banks of the Derg lies on the eastern edge of the zone, surrounding which the landscape is characterised by large agricultural fields and buildings. They create a very different character within the broader landscape and surrounding drumlin fields that typify the study area, elsewhere in the zone improved pasture dominates the landscape on well drained alluvial soils. Broad, expansive views to the surrounding landscape are afforded as a result of a gently rolling landform, occasional areas of floodplain on the river banks and low, managed hedgerows with occasional hedgerow trees.

Field boundaries are characterised by occasional belts of heather on the shallow valley slopes to the north, stone walls and broken hedgerows, which feature particularly on the rivers edge where fencing is also a noticeable feature. Fields are generally regular in pattern due to the rolling landform. Occasional small wooded copses are often associated with large farmsteads on the mid slopes, providing windbreaks in an exposed landscape and distinctive belts of trees and shrubs follow the rivers path. There is an open character to the valley sides and the coniferous plantation on the outskirts of the Baronscourt estate is a noticeable and distinctive visual feature on the ridgeline to the south towards Bessy Bell.

© Mouchel 2016

Settlement in the zone consists of narrow winding roads on the valley sides and major arterial routes on the valley floor connecting Castlederg to Newtownstewart and Victoria Bridge. Scattered villages follow the valley bottom, and are commonly concentrated at river crossings with attractive stone bridges. Large mill buildings near Ardstraw are a distinctive visual feature of the open river valley landscape while farms and cottages are scattered along the local roads and lanes.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and local value; the broad, rolling valley landform with a lack of a strong vegetation framework suggests a reasonable capacity to accommodate change of the type proposed. Sensitivity to change of the type of development proposed is considered to be in the higher order of **moderate.**

© Mouchel 2016

LCSZ 6.1 – Meenashesk Highland Bogs and Forest

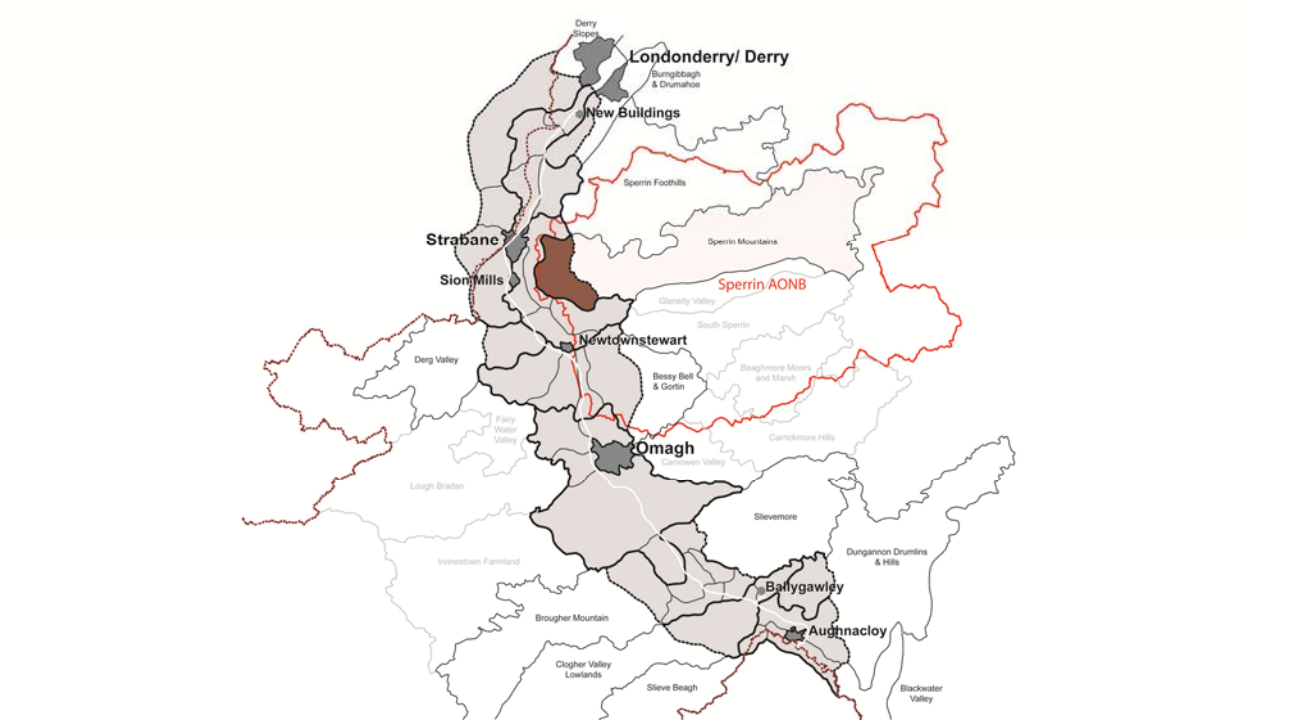

Plate 10C.43

View towards the summit of Meenashesk from the valley. Extensive bogs can be seen across the summit area, which dominates views locally.

Plate 10C.44

View from the upper slopes of Meenashesk. Scattered vegetation and broken field boundaries are characteristic of the farmland character, with expansive views westwards.

© Mouchel 2016

Plate 10C.45

View towards the mid slopes of Meenashesk, showing an expansive area of blanket bog in a local plateau landscape. Coniferous plantations are a conspicuous feature of the landscape.

Key Features:

- Character Zone lies within the Sperrin AONB
- Expansive areas of blanket bogs consisting of a high proportion of heather and gorse
- Large blocks of coniferous plantations on mid slopes of hills
- Douglas Burn river flowing off the summit, creating deep cuts in the hillside on higher ground
- Sparsely populated
- Vegetation consists of a high proportion of heather, gorse and scrub giving a wild appearance
- Broken field patterns due to the blanket bogs and poorly drained soils

Description

Situated to the east of Sion Mills and Victoria Bridge on the upland slopes of the western fringes of the Sperrin AONB, incorporating the dominant hill masses of Meenashesk and Craigatuke. The zone is characterised by large areas of blanket bogs in a rolling landform that falls away to the west and south into the valleys of the rivers Mourne, Strule and Owenkillew to the south. Fast flowing moorland streams flow from the hills into the valleys and erode deep channels in the boggy landscape between drumlin moraine. Large blocks of managed coniferous forest are distinctive features on the mid slopes of the hill sides, notably Ligfordrum on the lower slopes of Craigtuke and Skinboy on the southern slope of Meenashesk. The Douglas Burn valley flows from the upper slopes of Criagtuke, bisecting Ligfordum forest and is a typical river valley profile within irregularly shaped and eroded drumlins on lower ground. The landform is predominantly rolling in the broader landscape while drumlin formations become irregularly shaped and extended on mid slopes particularly where streams have eroded them, tending to be more distinctive and regular on the lower slopes.

Field patterns are generally broken around the large areas of peatland and are bordered by a large proportion of heather and gorse. Predominantly unmanaged, overgrown hedgerows with few hedgerow trees allow for expansive views across to the valley to the west and Tullywhisker hill mass beyond. The hill summits generally consist of and are characterised by expansive open areas

© Mouchel 2016

of blanket bogs and a large proportion of heather and gorse. The lack of hedgerows and trees on higher ground allow for open, broad views to the surrounding landscape. In areas with poorly drained soil, the fields have become unmanaged and overrun with scrub and bogs, resulting in a wild, unkempt feel to the area. Scattered properties are located in lower areas of localised valleys and along with the local roads, generally follow the path of rivers and streams in the zone. Views are afforded towards the historic towns of Sion Mills and Victoria Bridge from local high points in landform.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and national value; the high proportion of bogs, sparse population and expansive views would suggest limited capacity to accommodate change. Sensitivity to change of the type of development proposed is in the order of **high**.

LCSZ 7.1 – Baronscourt Valley

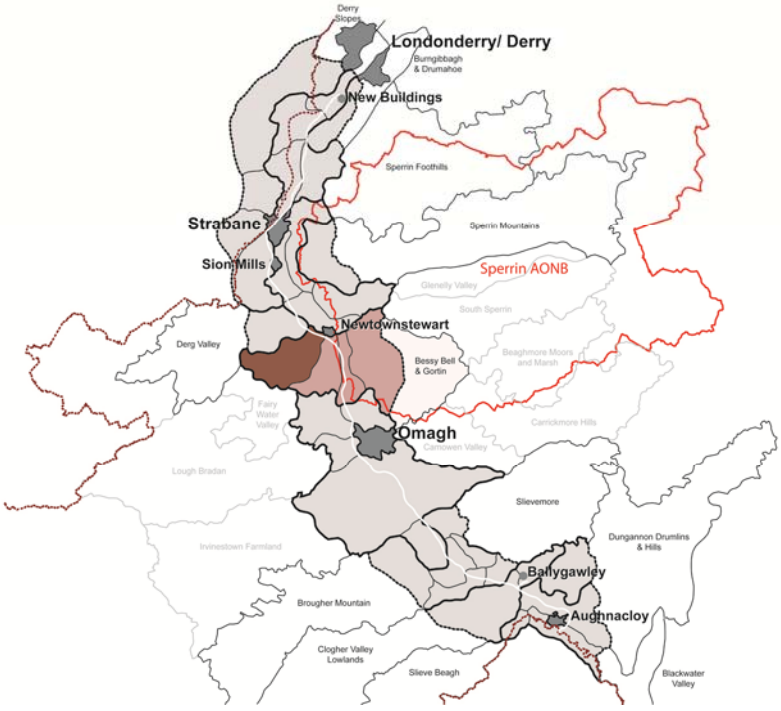

Plate 10C.46

View from the western flank of Bessy Bell towards large coniferous plantations, broad pastoral fields, broken hedgerow boundaries and tree lined roads.

Plate 10C.47

View of the landscape between plantations, with a mix of pastoral fields, scattered scrub, deciduous copses and farmsteads.

Plate 10C.48

Dense blocks of coniferous plantation, edged by mature deciduous trees.

Key Features:

- Large tracts of managed, coniferous plantations
- Broad valley offering expansive views from the valley sides
- Rolling landform, drumlin formations not very apparent
- Deciduous trees on lower ground with occasional pockets of wet flushes and birch woodland
- A distinct change in character from the open, floodplain landscape to the north
- Baronscourt Registered Park and Garden lies within the character zone

© Mouchel 2016

Description

This character area is to be found to the south west of Newtownstewart and includes the Baronscourt estate, the western slopes of Bessy Bell and the opposite valley sides. It is characterised by large blocks of managed coniferous forests across the valley floor and on the mid slopes of valley sides. Expansive views are afforded from the upper slopes of Bessy Bell into the valley. Small streams run off the slopes of Bessy Bell and on the valley floor a series of loughs exist, although these are not a significant feature of the zone as they are well contained by managed forest.

Deciduous trees and pockets of woodland are more of a feature on the lower valley sides and deciduous planting on the edge of coniferous plantations acting as windbreaks. On the valley sides, there is a very open feel due to occasional small pockets of woodland, linear belts of gorse on broken field boundaries and few hedgerow trees. On higher ground to the south field boundaries are often demarcated with gorse and fencing with no hedgerow trees.

The eastern extents of the character zone is gently undulating in landform and is bordered to the north by a very distinctive ridgeline of drumlin moraine, with mature deciduous trees on the mid slopes, beyond here the landscape changes to the low lying floodplain with large flat arable fields and extensively managed hedgerows. Dense avenues of trees are typical on local roads and break up views into the surrounding landscape while coniferous planting frames and generally dictates views within the character zone. The valley is sparsely populated with the village of Drumlegagh isolated to the west and properties and local roads generally following the valley floor, while the valley floor contains numerous forestry tracks winding between the plantation blocks.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and local though potentially county value; the large coniferous plantations, contained views and mature woodland to the valley floor would suggest some capacity to accommodate change of the type proposed. Sensitivity to change of the type of development proposed is in the lower order of **high**.

© Mouchel 2016

LCSZ 7.2 – Bessy Bell

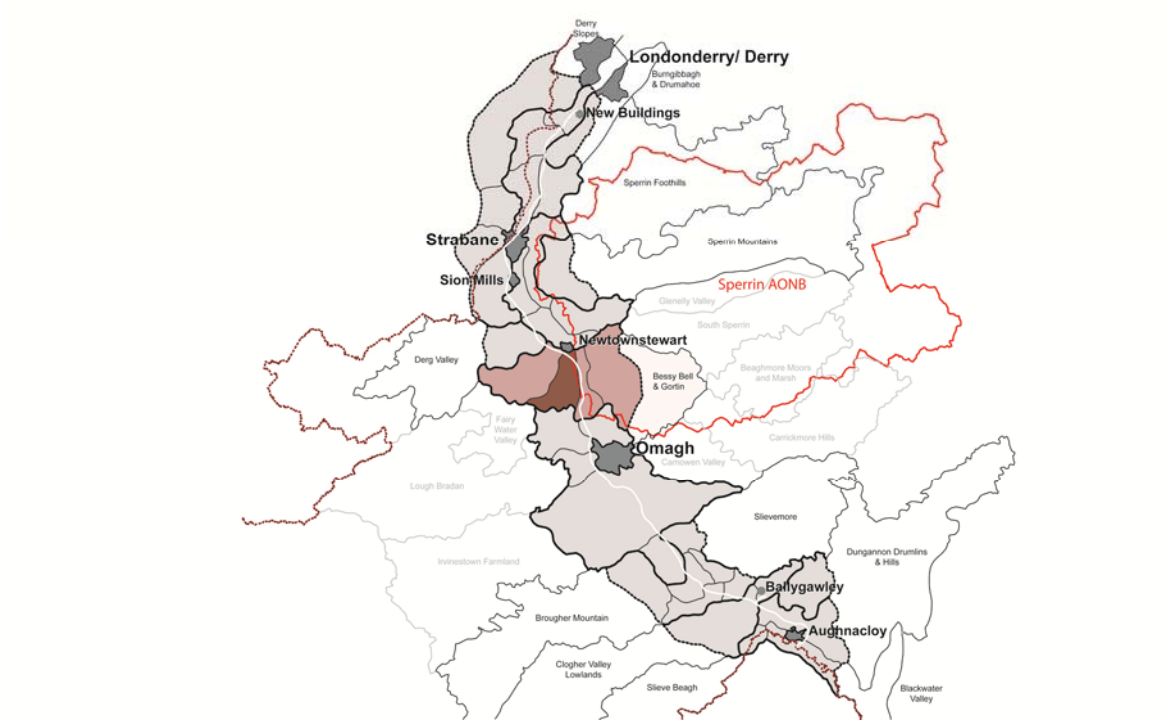

Plate 10C.49

View from the mid slopes of Bessy Bell looking towards the summit and beyond to the Baronscourt estate. The transition from open farmland with scattered farmsteads and low managed hedgerows, to the exposed moorland summits can be seen along with the prominent wind farm.

Plate 10C.50

View towards the summit of Bessy Bell and the transition from pastoral fields to open moorland. Field boundaries consist of fencing and gorse on the higher ground with few trees.

© Mouchel 2016

Plate 10C.51

View towards the summit of Bessy Bell and shows the transition from pastoral fields into the open, distinctive moorland summit. Wind turbines are prominent and hedgerows tend to be managed with few hedgerow trees.

Key Features:

- Summit of Bessy Bell
- Wind turbines a prominent feature
- Exposed moorland to the higher slopes
- Coniferous plantations becoming apparent to the west
- Low hedgerows with fewer species
- Expansive views across gently rolling landscape and across to the Sperrins to the east
- Western border of the Sperrin AONB follows Castletown Road, on the eastern edge of the zone

Description

The character zone incorporates the mid to higher slopes of Bessy Bell, to the south of Newtownstewart. The summit reaches 420m and contributes, along with the summits of Mullaghcarn and Slievemore to the east, to form a gateway to the south of the Sperrins. Higher slopes are characterised by expansive moorland with blanket bogs, broad views to the surrounding landscape with unmanaged broken field boundaries, typically consisting of gorse and heather, and few hedgerow trees which accentuates the open feel to the hill top. Field boundaries are often gappy with wire fencing more visible. On the southern slopes, the landscape transitions from the open moorland summit, to relatively steep rolling hill sides and then undulating, irregularly shaped drumlins towards the Fairy Water valley landscape. Distant views down into the River Strule valley and towards the hill masses of Deers Leap, Mullaghcarn and Slievemore are afforded from the eastern slopes.

Gently rolling semi improved pastoral grassland typifies the lower eastern slopes of Bessy Bell. The coniferous plantations of Baronscourt become apparent towards the summit, on the western slopes of the hill. A wind farm on the eastern mid slopes is a dominant visual feature and creates a regional landmark, visible from valleys to the east and north as well hills beyond. Local roads are infrequent and tend to skirt around the lower to mid slopes of the hill while the summit is fairly inaccessible with few properties, typically large farm buildings with small scale coniferous planting

© Mouchel 2016

to act as windbreaks in the exposed landscape. On the lower to mid slopes settlement is generally limited to farmsteads and scattered properties.

Sensitivity to Change

The character zone is considered to be of good quality and local value, due to its accessibility and in its context as prominent landmark hill form. The exposed upland bogs to the summit and open fields on higher slopes along with views afforded to the hill from a broad surrounding area would suggest a low capacity to accommodate change of the type proposed. Sensitivity to change to the type of development proposed is in the lower order of **high**.

© Mouchel 2016

LCSZ 7.3 – Enclosed River Strule Valley

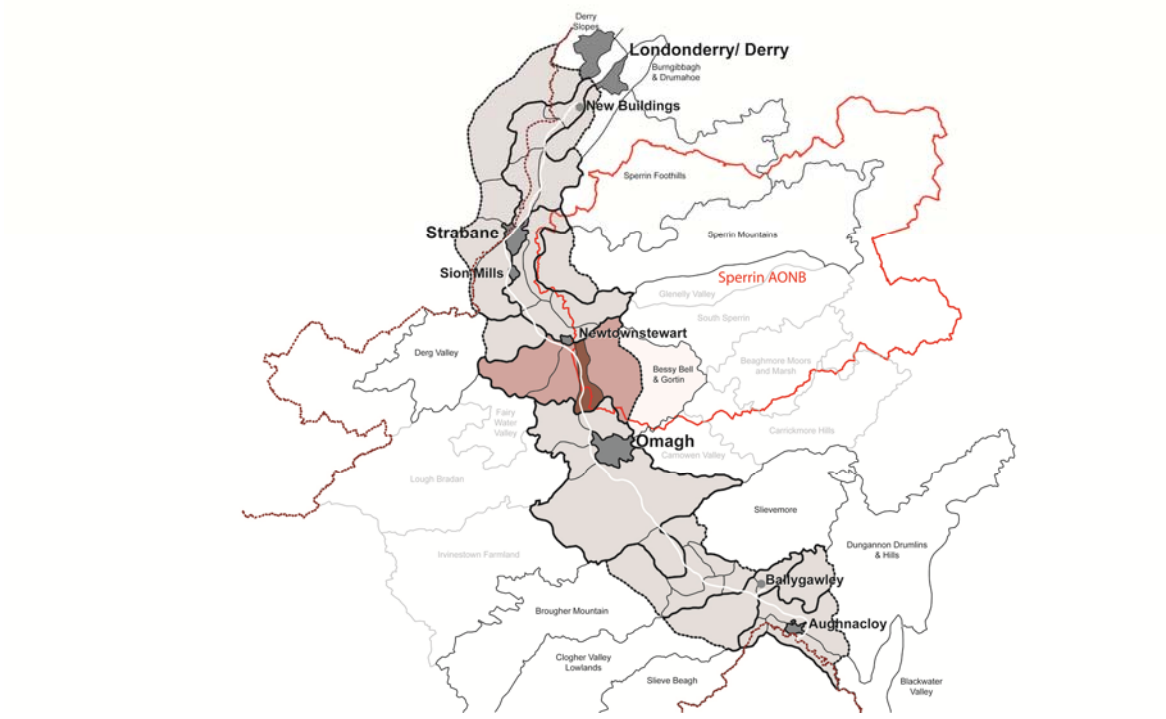

Plate 10C.52

View from the southern extent of the character area, where the river valley narrows. Bessy Bell and its wind farms form a visually prominent context.

Plate 10C.53

View along the Strule valley and the flanking slopes of Bessy Bell. The containment of views and steeper valley sides are a consistent

© Mouchel 2016

Plate 10C.54

Dense, linear belts of deciduous woodland occupy the valley floor and river margin.

Key Features:

- Character Zone lies on the margin of the Sperrin AONB
- Narrow, well wooded river corridor with dense deciduous planting on valley sides
- Visually contained by Bessy Bell to the west and hill mass of Mullaghcarn to the east
- A5 is a prominent feature in the valley both visually and through noise
- Localised areas of floodplain on the eastern banks of the river
- Wind farm on the mid slopes of Bessy Bell overlook the valley, acting as a visual landmark
- Enclosed views on valley bottom, awareness of the valley extends to higher ground as the landform shallows out

Description

The character zone is located between Mountjoy and Newtownstewart and comprises the narrow valley of the River Strule until the intersection of the Owenkillew River to the east of Newtownstewart. It is characterised by a narrow, incised river valley with rolling valley sides and small winding streams and burns flowing down from the hill masses of Bessy Bell to the west and Mullaghcarn to the east. The eastern banks of the river tend to be slightly shallower in gradient and contain low lying areas of floodplain, while the western banks tend to be slightly steeper. The zone is enclosed and views are typically focused and framed along the river, across to opposite valley sides and up towards surrounding hills, with Bessy Bell acting as a prominent visual landmark along with the wind farm on its eastern mid slopes. The isolated hill of Deers Leap sits in the foreground of Mullaghcarn in the skyline to the east and is a distinctive visual feature from within the valley. The river valley is well wooded and has attractive views with a sense of enclosure, due to the vegetation and landform. On the higher valley sides the gradient of the landform flattens out and awareness of the river and its valley is possible until passing over higher ridgelines to the east and west. Views from higher valley sides are focused into the river valley framed by opposing hills in the background.

Field boundaries typically consist of generally unmanaged hedgerows which are overgrown with patchy areas of gorse and heather where farming is less intensive, a narrow stretch of fenced fields in the river valley bottom. Field patterns tend to be irregular on the valley floor, becoming more

© Mouchel 2016

regular on the valley sides while dense belts of woodland and shrubs follow the river banks. The zone is predominantly open farmland consisting of improved pastoral grassland with patches of woodland in the valley. The existing A5 corridor is a distinctive visual feature in the landscape, following the river terraces. Regularly scattered properties and farms following the river valley with occasional businesses on the edge of the A5. Local roads regularly climb their way up the valley sides to the east and west.

Sensitivity to Change

The character zone is considered to be of good quality and local value, with the valley forming the western limit and context for the Sperrin AONB**.** The narrow valley with its contained views along the river, the presence of existing primary transport routes and belts of mature woodland would suggest some capacity to accommodate change of the type proposed. Sensitivity to change to the type of development proposed is considered to be in the upper order of **moderate**.

© Mouchel 2016

LCSZ 7.4 –Sperrins Lower Slopes

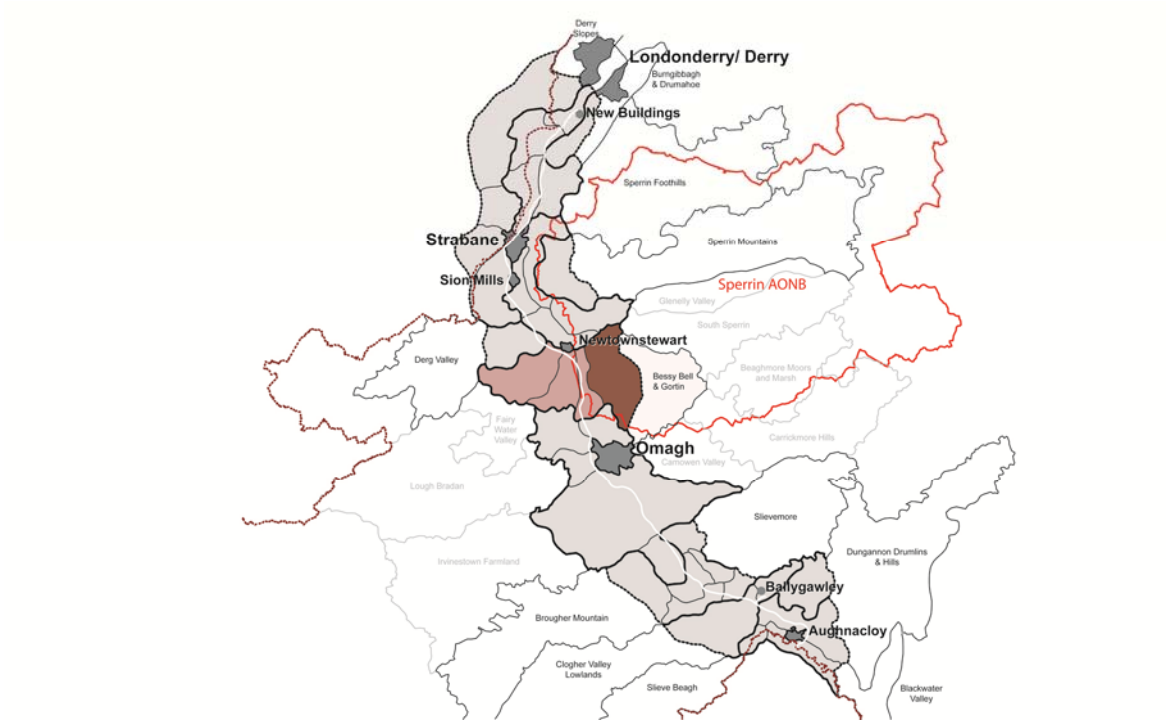

Plate 10C.55

Elevated view overlooking the river valley to the west. Overgrown, unmanaged hedgerows predominate, with scattered wooded outcrops and isolated farmsteads on the mid slopes.

Plate 10C.56

The wilder, open character of the upland landscape and rough pasture.

© Mouchel 2016

Plate 10C.57

View across raised bog with wet flushes and mixed woodland copses.

Key Features:

- Character Zone lies within the Sperrin AONB
- Rising, rolling mid slopes to the Sperrins incorporating Deers Leap
- High proportion of raised bogs in core of the zone
- High proportion of heather, gorse and wet flushes with rough pasture create a wild feel to the landscape
- Pockets of coniferous plantation with Gortin Glen on Mullaghcarn visually prominent
- More distinctive drumlins become extended as landform rises and landscape opens out

Description

The character zone consists of the slopes leading down from the large hill masses of Mullaghcarn, Slieveard, Curraghchosaly, Mary Gray and incorporates the isolated hill of Deers Leap. The zone is situated to the east of the existing A5 corridor and River Strule, north of Omagh and within the Sperrin AONB. Out of the River Strule valley the landform rises east towards the large hill masses while awareness of the river decreases over localised ridgelines into upland moors and bogs. Drumlins are more distinctive and regular on the lower slopes to the east with managed hedgerows and hedgerow trees. Outward views are dominated by the Sperrins and the prominent ridgeline of Mullaghcarn to the east. The gently domed form of Deers leap is a dominant landform feature in the area, surrounded by drumlins with wet flushes on all sides and a large amount of acid grassland on its upper slopes. Numerous streams and tributaries flow down from the hills and through the zone towards the River Strule, typically narrow and winding.

Vegetation predominantly consists of overgrown hedges with a large proportion of heather, gorse and deciduous hedgerow trees. Fields often contain rough, overgrown pasture while on higher ground the hedgerows become gappy, with wire fencing and stone walls more evident as field boundaries. Large areas of sedge and bogs occur in the hollows between the drumlins. The zone generally has a wild feel due to the high proportion of gorse, heather and large areas of blanket bogs in the core of the zone. Tree cover is relatively dense with intermittent small copses and birch woodland often associated with areas of raised bogs and wet flushes. The landscape starts to open out and fields become broken on elevated mid slopes of Mullaghcarn with views afforded to the western valleys and hill masses of Bessy Bell and Pigeon Top. Smaller, intimate fields are often

© Mouchel 2016

associated with farmsteads. The large coniferous plantation of Gortin Glen on the slopes of Mullaghcarn are a distinctive visual feature. Settlement is typified by scattered properties and farmsteads throughout the area, typically occurring on the mid slopes of drumlins. Local lanes skirt the lower slopes of the Sperrins with numerous scattered farmsteads and the villages of Gortnagarn, Dunmullan and Tircur in the southern half of the character zone.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of high quality and national value**,** reflecting its location within the Sperrin AONB**.** The wild feel, large proportion of raised bogs and proximity to Sperrin summits would suggest that the zone's low capacity to accommodate change of the type proposed. Sensitivity to change of the type of development proposed is considered to be in the order of **high**.

© Mouchel 2016

LCSZ 8.1 – Wooded River Strule Valley

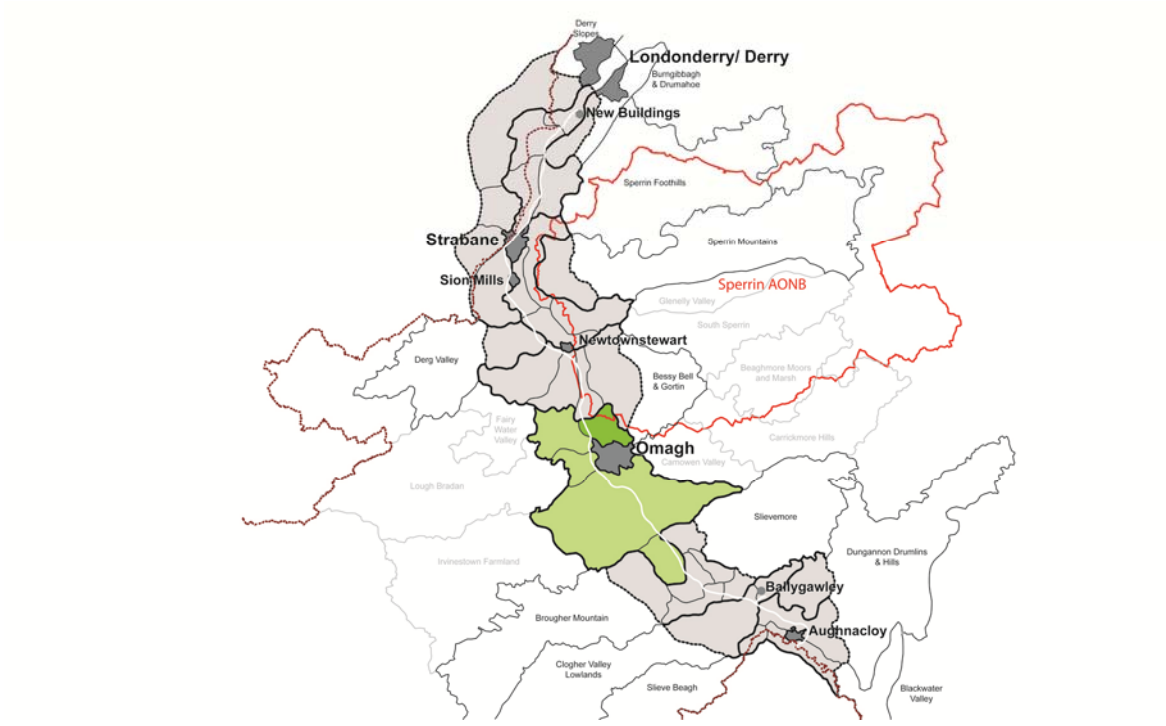

Plate 10C.58

View across the gently rolling river valley landscape, with belts of mature woodland and hedgerow trees and broad views to the Sperrin Hills.

Plate 10C.59

A meandering River Strule, set within well vegetated rural farmland. Hedgerows tend to be managed, with numerous hedgerow trees.

© Mouchel 2016

Plate 10C.60

View across rolling landform to the west of the character zone, with low and irregular drumlin formations crossed by linear belts of trees and occasional copses.

Key Features:

- Wide meandering and well wooded river valley with a mix of deciduous and coniferous planting
- Well populated on the fringes of Omagh
- Distinctive belts of mature trees and raised bogs and wet flushes in between drumlins in the east
- Broad, contained views with surrounding hills acting as backdrops
- Eastern half of the zone lies within the Sperrin AONB

Description

The character zone is located in a low lying wooded river corridor immediately to the north of Omagh and east of Mountjoy, broadly following the River Strule. The zone encompasses the River Strule, the villages of Knockmoyle and Gortnagarm, a section of the A5 corridor, the Ulster American Folk Park and Mountjoy Forest. The zone is broadly framed by the summits of Mullaghcarn and Slieveard to the east, with Bessy Bell a prominent landmark to the north west. The River Strule is a discreet feature, set within the drumlin landscape and typically only visible in close proximity or from local high points. Its wide meandering features areas of low lying floodplain, with smaller tributaries descending from the eastern hills.

Extended, irregular and low drumlin formations create a more open feel to the landscape. Dense belts of mature, deciduous woodland and coniferous plantations are a dominant feature of the area while hedgerows typically consist of large hedgerow trees and are predominantly managed. The field pattern is generally irregular and medium in size, although with occasional smaller intimate fields associated with farmsteads and small villages. Dense copses of woodland are often associated with farmsteads and large properties, while raised bogs are a common feature of the southern half of the character zone between drumlin formations; self sown pockets of birch within raised bogs are distinctive, with wet flushes and patches of sedge a common feature in the lower lying areas. There is a sparse network of local roads, although the area is well populated with a mix of small villages, large properties and scattered farmsteads. Churches and stone bridges offer a cultural link to the area's heritage.

© Mouchel 2016

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and local though potentially county value, with the eastern part of the LCSZ falling within the Sperrin AONB. The extensive woodland belts, well populated with broad views and rolling landform would suggest some capacity to accommodate change of the type proposed. Sensitivity to change of the type of development proposed is considered to be in the order of **moderate**.

© Mouchel 2016

LCSZ 8.2 –Fairy Water Drumlins

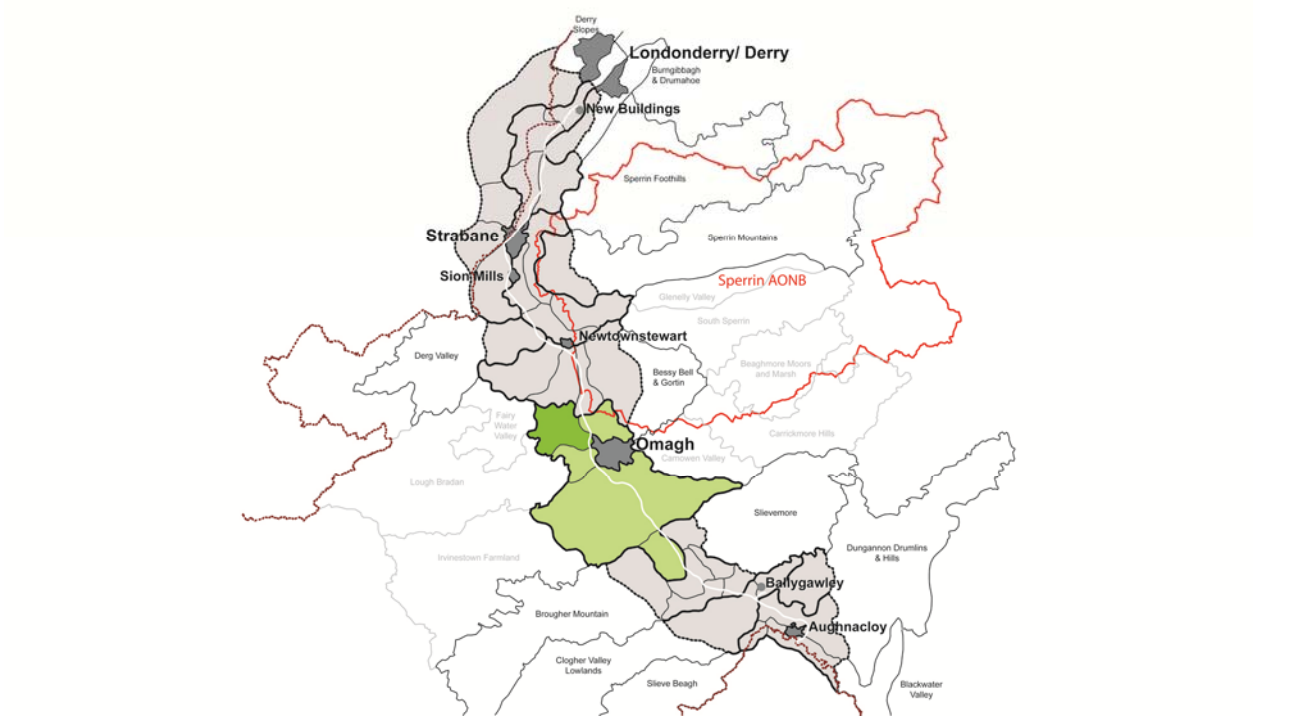

Plate 10C.61

The undulating landform and wild appearance of the valley floor with raised bogs and self seeded birch outcrops.

Plate 10C.62

Irregular drumlin profiles, scattered hedgerow trees and contained views are characteristic of the area.

© Mouchel 2016

Plate 10C.63

View across rolling drumlin farmland towards Bessy Bell. The distinctive wooded outcrop on a local rise to the right of view, indicates the potential presence of a rath.

Key Features:

- Distinctive undulating drumlins on valley floor, becoming irregular and extended on valley sides
- Landform changes from an undulating valley floor to rolling valley sides
- Variety of field sizes, all irregular in shape
- Unmanaged, wild appearance to the valley floor with remnant pastures and overgrown hedgerows
- Bessy Bell and Pigeon Hill are dominant visual features within the character area, the rivers do not form a prominent feature in the landscape as they wind between drumlins

Description

This character zone consists of the Fairy Water river valley lying adjacent to Bessy Bell and Pigeon Top, extending to the west from the River Strule corridor. The area is characterised by the broad, undulating valley of the Fairy Water to the valley floor and numerous tributaries flowing from the surrounding hills and through gullies between drumlin formations on the valley floor. The landform is hummocky and irregular with more distinctive drumlin formations to the lower slopes of the valley and large areas of raised bogs in the valleys between them. On higher ground the drumlins become more extended and irregular in shape, creating a more rolling landform that allows for broad views to the east and west. On the broad valley floor the landform is more undulating with generally overgrown hedgerow field boundaries and hedgerow trees, resulting in contained and short distant views within the zone. Fairy Water and its numerous tributaries do not form a significant feature of the character zone due to the contained nature of the landscape. Bessy Bell to the north and the wind farm on its upper slopes are prominent visual features throughout the majority of the zone and aid in orientation through the visually contained valley landscape.

Large areas of raised bogs are found to the south of the zone and bordered by many hedgerows containing clumps of gorse and wire fencing to control stock grazing. Hedgerows in the zone are generally unmanaged and overgrown while field patterns tend to break down in areas of poorly

© Mouchel 2016

drained soil. The character zone consists of occasional copses and blocks of deciduous woodland with occasional small pockets of coniferous forestry. Patches of woodland on the valley floor are a dense mixture of birch, willow and hawthorn. The landscape is predominantly covered by improved grassland throughout with some rough pastures associated with poorly drained soils. The landscape feels rough and unmanaged in general. Settlement is characterised by numerous scattered farmsteads and large properties following the path of the valley with the village of Gillygooly on the eastern edge of the zone, connected by infrequent lanes.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of unremarkable quality and local value. The character zone that is considered to have a sensitivity to change to the type of development proposed in the order of **moderate**.

© Mouchel 2016

LCSZ 8.3 – Crockavanny Drumlins

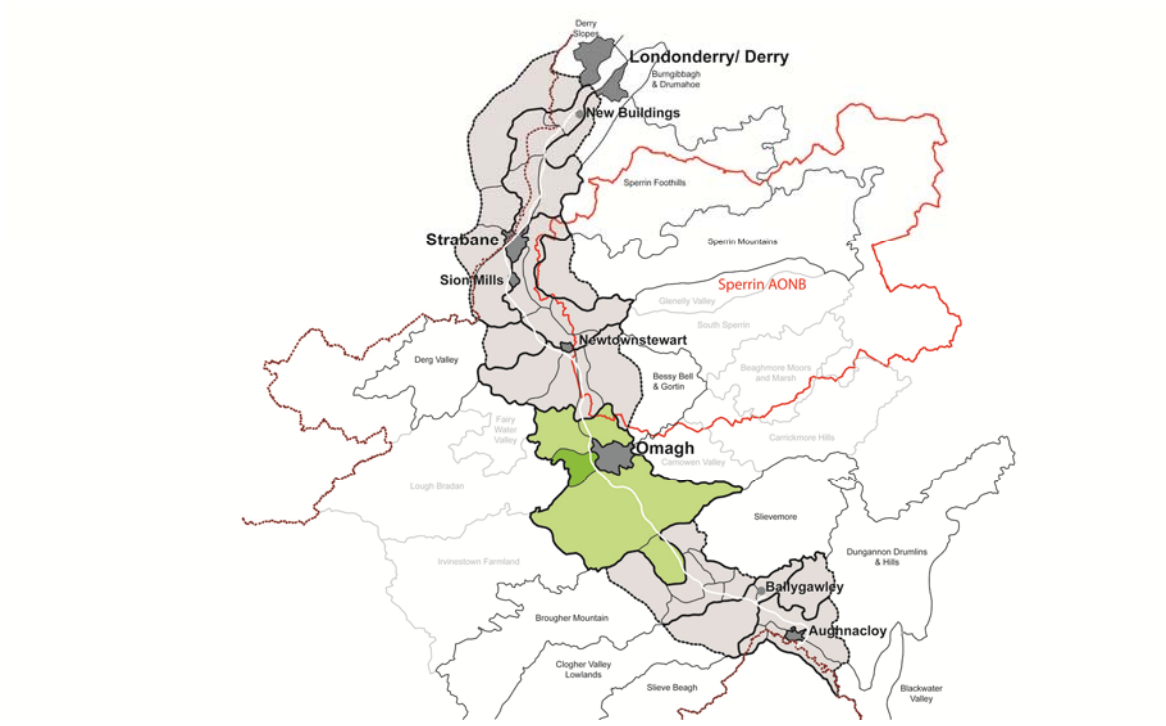

Plate 10C.64

View across the raised, undulating drumlin farmland west of Omagh. Managed hedgerows follow the landform, with occasional hedgerow trees and wooded outcrops.

Plate 10C.65

The drumlin farmland provides a sense of enclosure and locality, within which isolated and clustered dwellings are a regular feature.

© Mouchel 2016

Plate 10C.66

View across raised bog, typical in the hollows between drumlins. Numerous farmsteads and large properties are situated on drumlin slopes, surrounded by mature planting.

Key Features:

- Subtle hill form immediately to the east of the larger Pigeon Top
- Elevated landscape with well-spaced, extended drumlins and broad views to the surrounding landscape
- Well populated and a network of roads and local lanes
- Areas of raised bogs in damp hollows between drumlins and blanket bogs to the summit
- Well wooded farmland with managed hedgerows
- Distinct change in character to the south

Description

This character zone is located on a local rise with surrounding extended drumlin formations nestled between the large hill mass of Pigeon Top to the west and the town of Omagh to the east. The zone is characterised by its elevated nature, with a general rise of approximately 20 to 30m above the surrounding landscape, as well as a distinct change in the pattern and formation of drumlins in the area. Lying immediately to the north of a fault line, regular well defined and rounded drumlin formations begin to the south whilst within the zone the drumlins tend to be more spaced out and irregular in pattern and shape, leading up to the large local rise in landform east of Pigeon Top. The A32 borders the south of the character zone, at the transition to lower lying land to the south.

Raised bogs are a feature in the hollows between drumlins to south and west with areas of blanket bogs apparent on higher ground. Small streams flow off the top of this local rise and in between drumlin moraine, although they are not a prominent feature of the landscape due to the undulating landform. This isolated hill landform to the east of the much larger Pigeon Top allows for broad views compared to the undulating landscape to the south, due to its elevated nature and broader spaces between drumlins. Along with its proximity to Omagh this has resulted in a fairly densely populated landscape. There is a network of roads and local lanes and an awareness of Omagh to the east, especially from local rises and gaps in the landform. The area is a notably more populated area than Pigeon Top to the west.

© Mouchel 2016

There is a high proportion of small pastoral fields associated with the denser settlement pattern and numerous farms and large properties. Managed hedgerows tend to border the improved, pastoral fields with numerous mature hedgerow trees. The zone consists of predominantly wooded farmland broken by areas of raised bogs and wet flushes in damp hollows as well as two areas of blanket bogs and moorland on higher ground. Rough grazing is typical on localised moorland hilltops.

Sensitivity to Change

In the context of the wider area this character zone is considered to be of good quality and local value. The character zone that is considered to have a sensitivity to change to the type of development proposed in the order of **moderate**.

© Mouchel 2016

LCSZ 8.4 - South Omagh Drumlin Farmlands

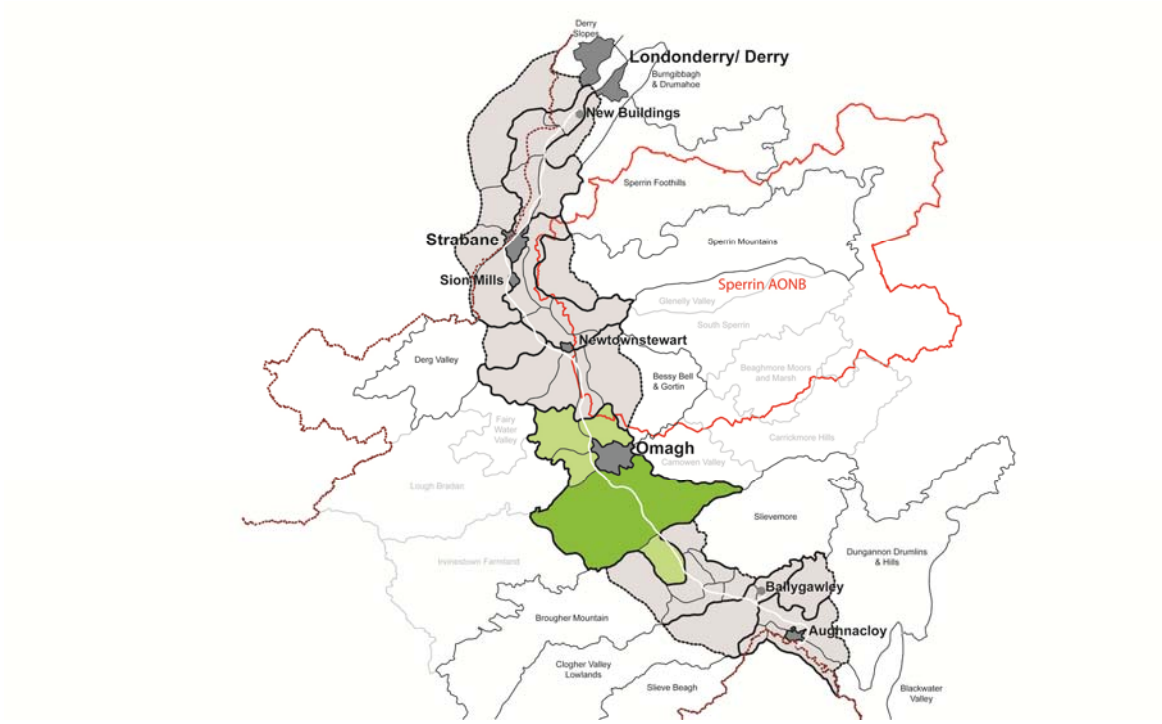

Plate 10C.67

View from Pidgeon Top west of Omagh, looking south across the drumlin landscape.

Plate 10C.68

Sense of enclosure and locality with the drumlin farmland.

© Mouchel 2016

Plate 10C.69

River courses are concealed within with the drumlin landscape, meandering between and with localised floodplain

Key Features:

- Shallow drumlin landscape with defined and regular drumlin forms
- An irregular, open field pattern with fragmented network of hedgerows and fencelines
- River networks converging, with narrow river plains
- Radial pattern of primary roads converging on Omagh

Description

This area forms part of an extensive, farmed drumlin field landscape that borders Omagh and extends south towards the Brougher Mountain ridgeline, beyond the towns of Fintona, Seskinore and Beragh (collectively LCZ's 8.4 and 8.5). The distinctions between these drumlin landscapes are subtle, relating to perceived changes in land management, vegetation cover, drumlin landform and proximity to hill mass and settlement.

Within LCSZ 8.4, Drumragh Water and Carnowen River both converge towards Omagh, carrying waters from a wide network of streams and river courses that descend from the sandstone ridgeline and which trace narrow winding courses across the drumlin landscape. Where river channels become more substantial, narrow river plains punctuate the drumlin terrain. Elsewhere the river network tends to be well concealed within the drumlin pattern.

The drumlin landscape is an extensive and regular network of shallow domed, widely spaced drumlin hillocks. The area is predominantly pasture within a patchwork of irregular fields, enclosed by a loose and sometimes fragmented network of hedgerows and fencelines. Tree cover tends to occur intermittently along field margins and in small scattered blocks and copses.

Several principle road corridors radiate from Omagh and across the LCSZ, often direct in nature and running broadly with contours, except for some minor cuts through drumlin forms. The shallow undulation of the landscape allows distant views towards surrounding hill masses of the Sperrins, Pigeon Top and the Brougher Ridge.

© Mouchel 2016

Sensitivity to Change

The drumlin and moraine landscapes are an expansive feature of the local landscape and part of the significant drumlin belts that span central Ireland and Northern Ireland. The varied nature of the terrain and the defined forms of the drumlins mean that in a local sense they are sensitive to landscape change. In a wider sense, drumlin form can be effective at concealing landscape elements and reducing their impact on the broader character. The area has a good landscape quality and local value. It is considered to have a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 8.5 – Eskragh Water and Routing Burn Drumlins

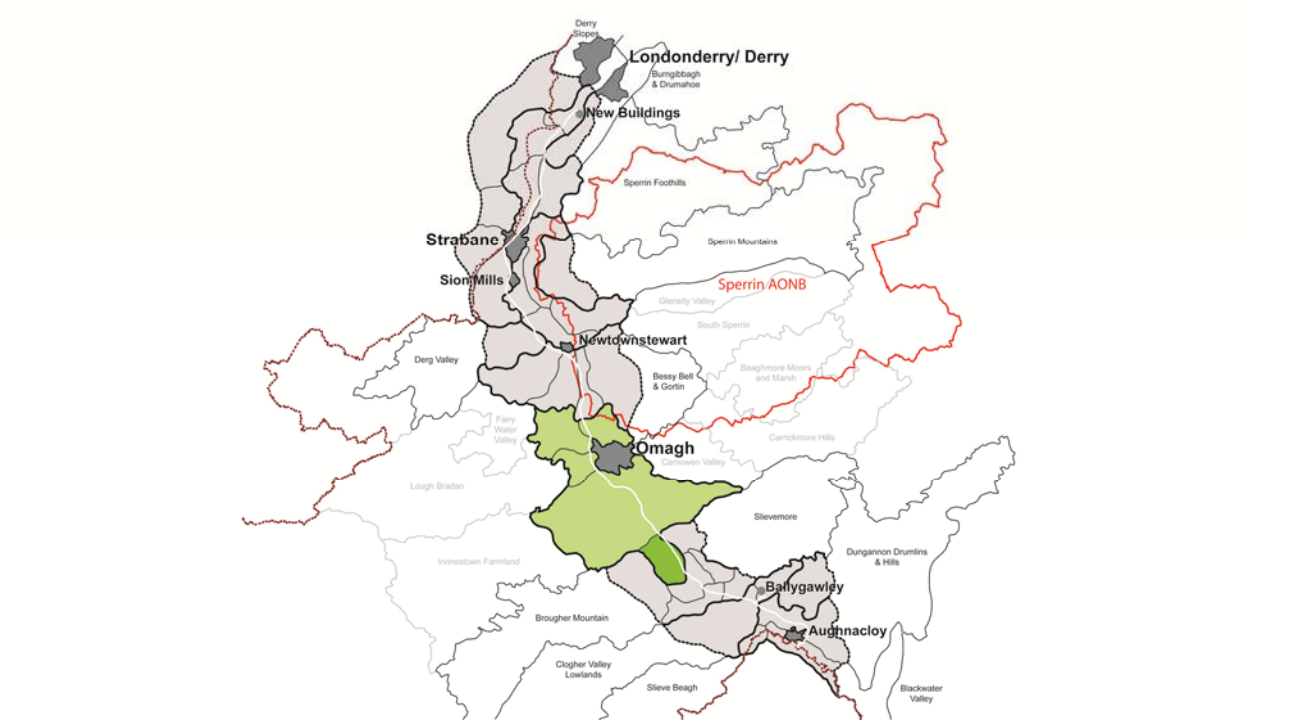

Plate 10C.70

Looking east across Eskragh Water from Crocknatummoge, and towards Garvaghy Big Hill.

Plate 10C.71

A typical landscape context north of Newtownsaville comprising pasture and intermittent hedges with numerous hedgerow trees.

© Mouchel 2016

Plate 10C.72

The open character and outgrown field margins associated with the area.

Key Features:

- Landscape of shallow, undulating drumlins/moraines
- Sense of shallow enclosure, with rolling farmland surrounding and a general rise to the Brougher Ridgeline
- Interspersed character between areas of unmanaged pasture, contrasting with open, rounded drumlin fields
- Shallow confluence of rivers and associated river plain

Description

This area forms a part of an extensive, farmed drumlin field landscape that encircles Omagh and extends broadly south towards the Brougher Mountain ridgeline, beyond the towns of Fintona, Seskinore and Beragh (LCSZs 8.4 and 8.5). The distinction between each of these LCSZs is subtle, relating to perceived changes in land management, vegetation cover, drumlin landform and associations with local hill mass and settlement.

LCSZ 8.5 lies in a shallow depression formed between the dip slope landforms of the Brougher Mountain/Slievemore Ridge. It is an extension of the distinct drumlin patterns to the north, crossed by the river courses of Routing Burn and Eskragh Water. It's distinction as a character zone arises from its sense of shallow enclosure within the surrounding dip slope farmlands and a rise toward the distinctive hills of Knockmany and Tullycorker.

The area is typically interspersed with shallow drumlins, its eastern side slightly elevated above the river margins to the west and flanking a series of low hills along the dip slopes. The field patterns here are irregular and often bounded by mature outgrown hedgerows, with areas of sedge that signify a change of ground condition over these pastures. This creates in areas a sense of enclosed and neglected character which contrasts with the more open and defined drumlin forms and managed pastures to the west. These alternating characters are often interspersed and it is difficult to mark a distinction, although the denser pockets of scrub woodland and outgrown hedgerow tend to be more evident between Tycanny, Newtownsaville, Killadroy and Gortaclare.

© Mouchel 2016

Sensitivity to Change

The shallow drumlin and moraine landscapes are an expansive feature of the local landscape and part of the significant drumlin belts that span central Ireland and Northern Ireland. In this area, the drumlin profiles and moraines are less pronounced then the wider belt of LCSZ 8.4 and more locally distinct in a sense of shallow enclosure within the dip slopes of the Brougher/Slievemore Ridge. The area has a good landscape quality and local value which has a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 9.1 – Slievelahan Farmlands

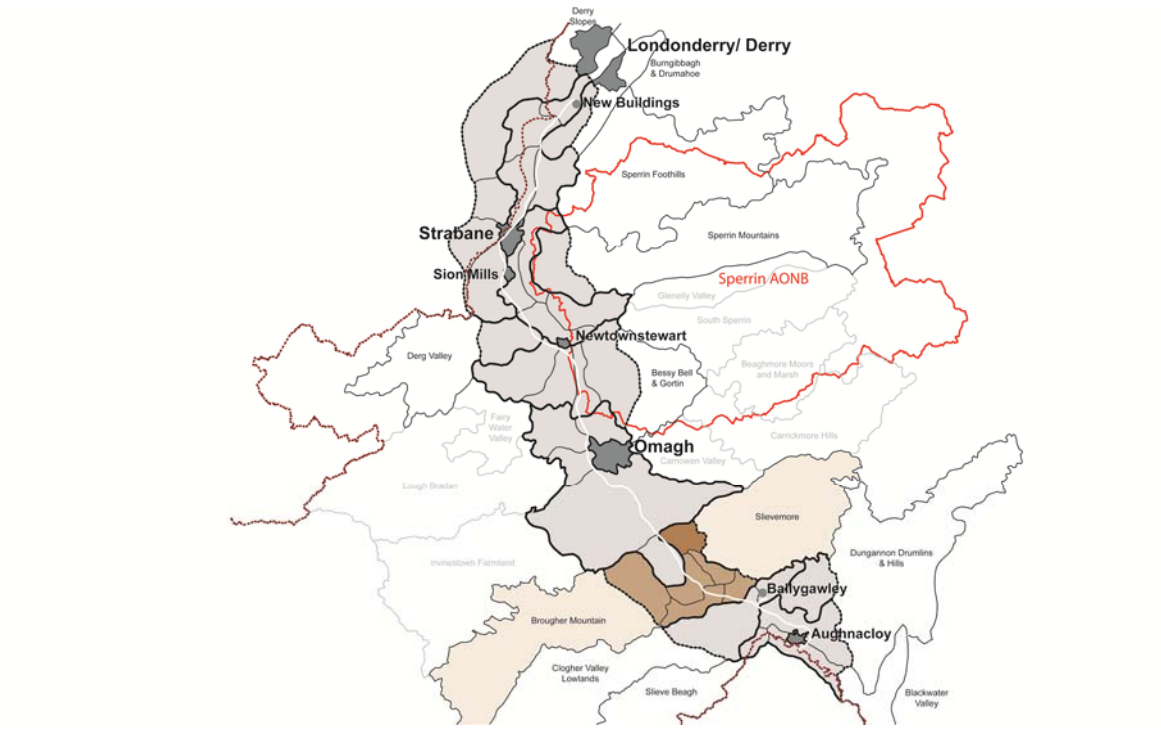

Plate 10C.73

View towards Slievedivena and its wind farm from the lower lying drumlin farmland.

Plate 10C.74

View north west across the broad hill slope farmland from its rise toward Slievedivena.

© Mouchel 2016

Plate 10C.75

View across the lower hill slopes of Slievedivena.

Key Features:

- Rising, open farmland along the north western dip slopes of the Brougher Ridge
- Large field pattern with decreasing vegetation cover at elevation
- Distinct outlying hillforms that define a transition between drumlin field and hill slope

Description

This is an area of open, rolling farmland that rises beyond the drumlin field landscapes of Omagh towards the hilltops of Slievedivena and Slievemore. It forms part of the extensive dip slope topography of the Brougher Mountain Ridgeline, continuing to the west across the hill and valley forms of Garvaghy (LCSZ 9.3), Tullanafoile (LCSZ 9.4) and Crocknatummoge (LCSZ 9.2)

The area is typified by larger field sizes that tend to be regular in pattern. Narrow hedge lines and occasional fences provide the predominant pattern of enclosure, with occasional to numerous hedgerow trees, some outgrown. This open hill farmland and the rising nature of the ground allow widespread views across the lower lying, shallow drumlin landscape and river networks draining north. The Sperrin Hills to the north are a more distant prospect, marking the northern extremes of the expansive drumlin belt bordering Omagh. The wind farm at Slievelahan is a prominent local feature of the landscape setting.

Farmsteads and dwellings across the hill slopes are dispersed alongside the road networks, contrasting with the nucleated settlements of Beragh and Sixmilecross at the foot of the hill slopes. The B46 road corridor connects these settlements and runs parallel with the foot of the dip slope. This geological fault is traceable within the landscape in the pronounced valley forms of Glashagh Burn at Sixmilecross, the outlying hillform of Curr Mountain at Gortaclare and the low ridges bordering Fintona to the west (see LCSZ 9.2).

© Mouchel 2016

Sensitivity to Change

The character of the farmland setting is continuous with that of the ridge line and its dip slopes, with a good landscape quality and local value. The progressively elevated terrain is a readable feature of the wider landscape, although this tends to be in association with the other LCSZ's which collectively characterise the dip slope farmlands. The area is considered to be in the order of **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 9.2 – Crocknatummoge Hillform

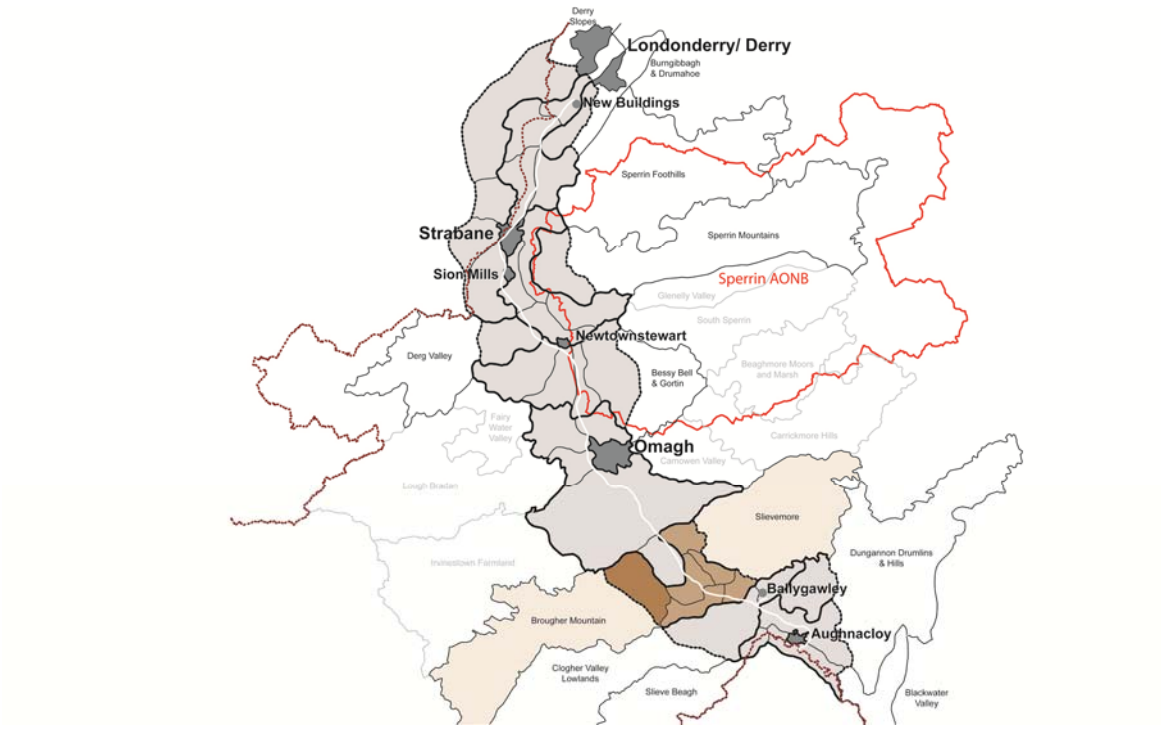

Plate 10C.76

View looking east across the hill top of Crocknatummoge.

Plate 10C.77

View looking north from Crocknatummoge, above Fintona.

© Mouchel 2016

Plate 10C.78

Looking north east across ridge profile of Crocknatummoge.

Key Features:

- Locally prominent hill form of Crocknatummoge
- Transition from drumlin field to hill slopes
- Rolling, open farmland, characteristic of the dip slope landscapes in general
-

Description

This is an area of open, rolling farmland that forms a part of the Ballyness Mountain hill mass to west of the project corridor. It forms part of the extensive dip slope topography of the Brougher Mountain and Slievemore Ridge, extending east across the hill and valley forms of Garvaghy (LCZ 9.3), Tullanafoile (LCZ 9.4) and Slievelahan (LCZ 9.1)

This is an area of broad and rolling farmland with a marked rise in terrain, giving widespread views across the lower lying shallow drumlin fields and river networks draining north and east. The northernmost limit of the hill form at Crocknatummoge marks the limit of the fault line, which visibly discerns the hill slope farmlands from the adjacent drumlin fields. It is a distinct and recognisable hill edge, bordering the nucleated settlement of Fintona and B46 road corridor.

The area is typified by well managed, larger field sizes that tend to be regular in pattern. Narrow hedge lines and occasional fences provide the predominant pattern of enclosure, with occasional to numerous hedgerow trees. Farmsteads and dwellings across the hill slopes are widely dispersed.

Sensitivity to Change

The character of the landscape is continuous with that of the ridge line and its dip slope farmlands. The elevated terrain of Crocknatummoge is a readable feature within the wider landscape and locally prominent to Fintona. The area has a good landscape quality and local value with a sensitivity to change in the order of **moderate**.

© Mouchel 2016

LCSZ 9.3 – Garvaghy Valley

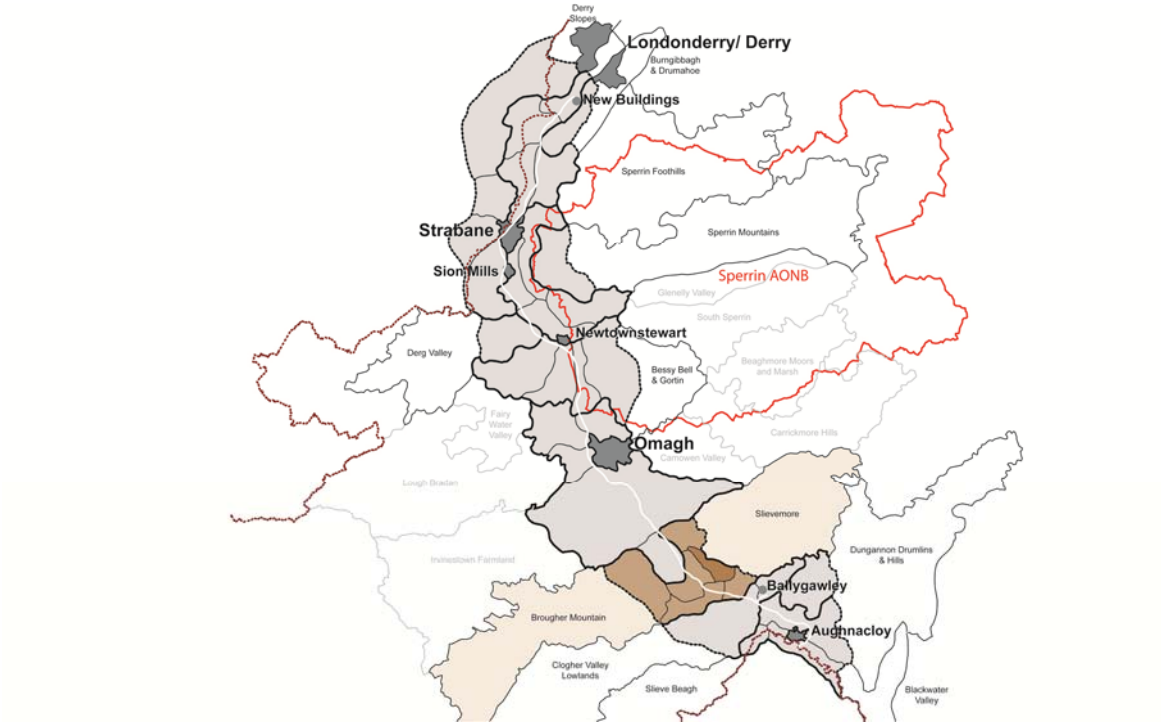

Plate 10C.79

View south east along from the edge of Garvaghy Big Hill, towards the settlement of Garvaghy.

Plate 10C.80

Looking west across Garvaghy towards Garvaghy Big Hill.

© Mouchel 2016

Plate 10C.81

The upper limit of the valley, with the existing A5 corridor just concealed from view. Coniferous plantations on Rarogan Hill are evident.

Key Features:

- Distinct local valley form enclosed by hill slopes
- Compact village concealed within valley
- Distinct landform of Garvaghy Big Hill
- A5 road corridor predominates along eastern edge of valley form

Description

This is a distinct local valley form that accommodates the existing A5 route alignment, rising from the drumlin field landscapes of Omagh towards the hilltops of Slievedivena and Slievemore. It forms part of the extensive dip slope topography of the Brougher Mountain Ridgeline, continuing to the west across Tullanafoile (LCSZ 9.4) and Crocknatummoge (LCSZ 9.2) and to the east across Slievelahan (LCSZ 9.1).

The valley is a distinctive feature of the landscape, enclosed by the hill slopes of the Brougher ridge and in contrast with lower, expansive drumlin landscapes to the north and west. It is a conscious point of transition along the existing A5 corridor, the road becoming locally enclosed as it rises along the eastern flank of the valley towards the ridge crest beyond Garvaghy. The small clusters of properties that comprise the village are located in the floor of the valley and are largely concealed from the road by landform.

Garvaghy Big Hill is a noticeable feature of the landscape from the valley and the major visual point of reference for road traffic approaching from the A5, with views channelled along the valley form towards the ridge crest. The area is typically open hill farmland, in character with the surrounding dip slope farmlands, becoming more exposed and with areas of unmanaged open ground at elevation. Blocks of coniferous plantation are features of the hill top landscapes near the summits of Rarogan Hill and Knockbrack.

© Mouchel 2016

Sensitivity to Change

The valley form is one of a series of incised river valleys that drain the hill slopes of the Brougher Ridge; it is not of rare quality but does form a distinctive component of the ridge landscape. The presence of the A5 road corridor along the valley places a major transport route within the context of the setting, and as such the sensitivity of the area is moderated. The valley has a good landscape quality albeit affected by the presence of the road corridor, with a local value. The area is considered to have a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 9.4 – Beltany & Tullanafoile Farmlands

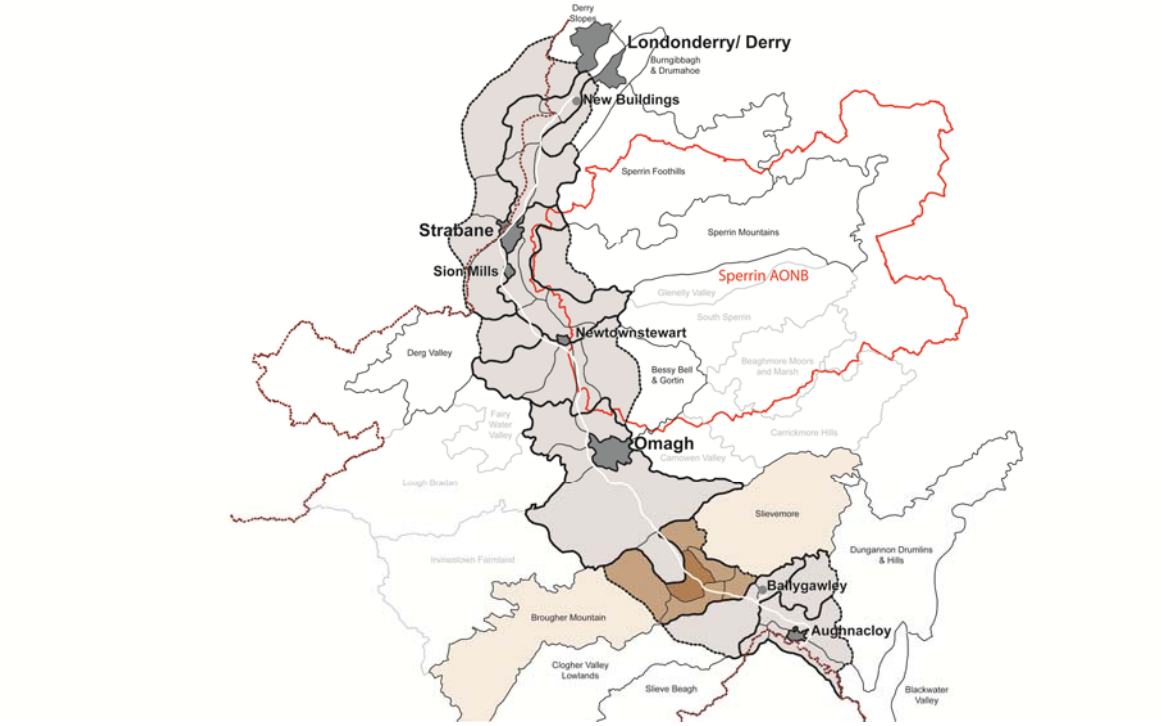

Plate 10C.82

View south west towards Beltany Hill.

Plate 10C.83

View towards Birneys Hill from Tycanny.

© Mouchel 2016

Plate 10C.84

View from Tullanafoile Hill towards Rarogan Hill.

Key Features:

- Rolling hill slopes associated with the broader landscape of the Brougher Ridge dip slopes
- Open, regular field pattern with managed hedgerow margins, occasionally outgrown
- Scattered farmsteads
- Open views to west and north

Description

The area forms a part of the extensive dip slope topography of the Brougher Mountain/Slievemore Ridgeline, extending to the west across Crocknatummoge (LCSZ 9.2) and to the east across Garvaghy (LCSZ 9.3) and Slievelahan (LCSZ 9.1).

The rolling farmland character of Beltany & Tullanafoile is closely associated with the farmed hill slopes of Slievelahan to the north. The area is distinguished largely by the division of landform imposed at Garvaghy (LCSZ 9.3) and the general association of landform with Eskragh & Routing Burn drumlin fields (LCSZ 8.5) to the west. The area is a transitional landscape, rising from the drumlin fields in a series of rounded hill forms towards the ridge tops of Rarogan Hill and Tycanny Hill. The rear side of Garvaghy Big Hill is shallow in nature and belies the character associated with its steeper valley face.

The landscape is typified by larger field sizes that are regular in pattern. Narrow hedge lines and occasional fences provide the predominant pattern of enclosure, with occasional to numerous hedgerow trees, many of which are outgrown on the lower lying hill margins. The distinctive and wooded ridgeline of Knockmany forms the backdrop to the limits of this farmland, beyond which the abrupt form of the Brougher Ridge marks a defining change of landscape character. Settlement pattern within this landscape is limited to a low density of scattered farmsteads and dwellings, the higher proportion of habitation tending to occur across the shallow moraines of Newtonsaville bordering the Eskragh Water and Routing Burn.

© Mouchel 2016

Sensitivity to Change

The character of the farmland setting is continuous with that of the dip slopes of the Brougher Ridge. The progressively elevated terrain is a readable feature of the wider landscape, while there is a local landscape quality associated with the setting. Its proximity to the distinctive ridge profile of Knockmany heightens the collective sensitivity of the area. It is a landscape of good quality and local value with a limited capacity to accommodate change of the type proposed. The character area is considered to have a sensitivity to change in the upper order of **moderate**.

© Mouchel 2016

LCSZ 9.5 – Knockmany Ridgeline

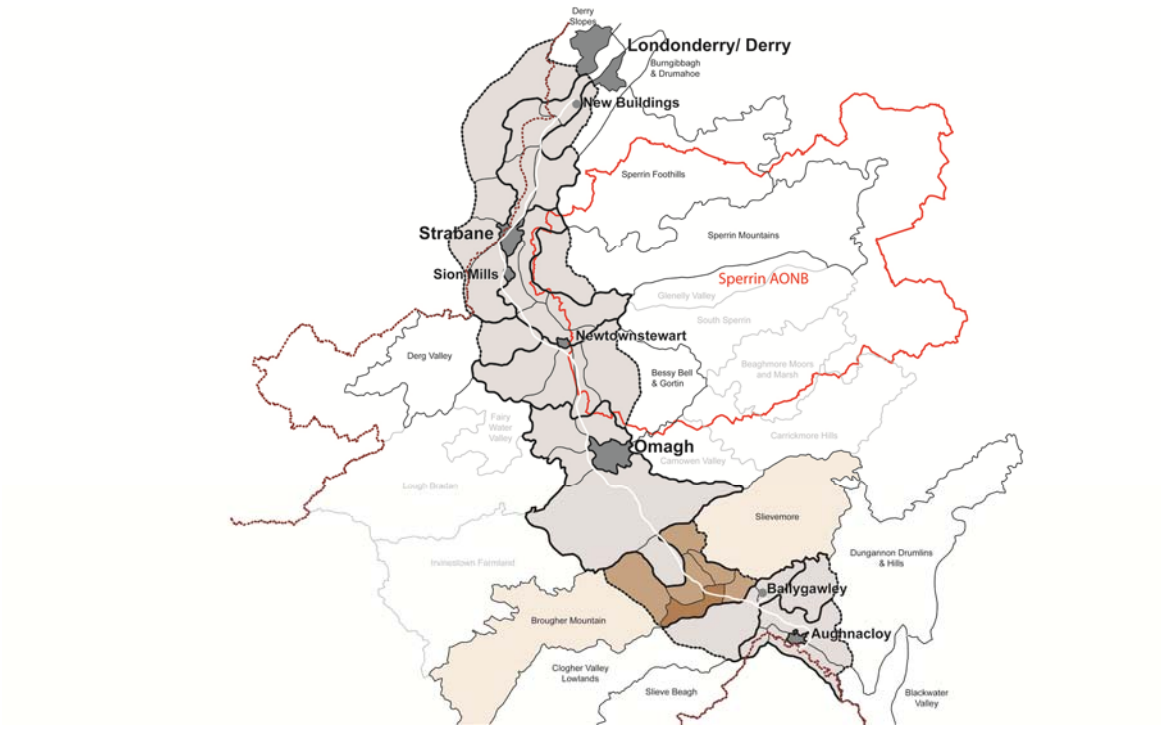

Plate 10C.85

The approach to Knockmany from Gulnaha, south of the ridge line.

Plate 10C.86

Knockmany ridge profile approached from Annagarve.

© Mouchel 2016

Plate 10C.87

View looking from Tycanny Hill toward Birneys Hill and Knockmany, defining the Brougher ridge line above drumlin fields to the south.

Key Features:

- Distinctive group of hill forms along the Brougher Mountain/Slievemore ridgeline
- Hill top plantations and woodlands
- Steep ridge slopes descending to edge moraines
- Local cultural significance of Knockmany as a landform and forest

Description

The area forms a part of the Brougher Mountain/Slievemore sandstone ridgeline that extends between Enniskillen and Pomeroy, locally characterised by a series of distinct hill forms comprising Knockmany, Killaney, Tullycorker, Tycanny and Birneys Hill. The very translation of Knockmany, meaning “many hills” is evocative of the local character associated with this section of the ridge. Coniferous plantations and belts of woodland are defining features of the hilltops and the steeper slopes, connected by a network of continuous and mostly well managed hedgerows with occasional trees and copses. Knockmany remains one of the oldest forested areas in Northern Ireland.

The ridgeline typically falls steeply to the south into an elevated and largely wooded transitional drumlin/moraine landscape above the wider valley. Knockmany Hill in particular is a distinguishable feature of the ridge landscape, largely wooded and with a distinct topography. North of the ridgeline the landform descends to a shallow dip slope, characterised by rolling hill pastures (see LCSZ 9.1). Local roads and scattered farmsteads and dwellings follow the hill contours along the foot of the ridgeline.

The ridge is incised in areas, above Tullyvernan and Kilgreen in a general south-east to north-west alignment that is typical of the ridgeline geology. Kilgreen, within the study corridor is an elevated valley form with a distinct and partially enclosed visual quality. The surrounding hill masses and the lower wooded moraine deposits give this area a feeling of separation and local distinction, as the valley form gives way ultimately to the pastures and low drumlin fields to the south.

© Mouchel 2016

Sensitivity to Change

The distinctive ridge of Knockmany, its historic woodlands and the recreational value of the setting combine to make this a landscape of very attractive quality and local though potentially county value. The diversity of landform and its varied outlooks gives this area a particular sense of place, a point of reference and familiarity from distant viewpoints. The character zone is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ 9.6 – Ballymackilroy Moraines

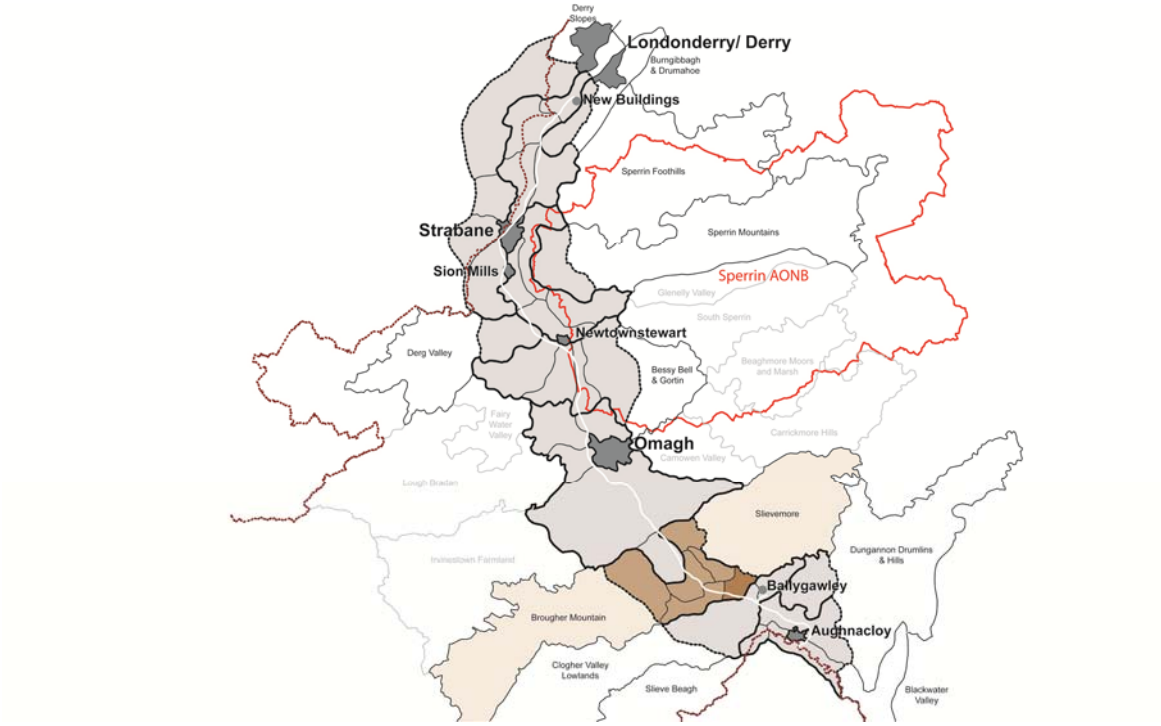

Plate 10C.88

View from above Ballymackilroy, at the head of its valley.

Plate 10C.89

Broad view northwards towards Ballymackilroy from Tullylinton, showing its context on the ridge line.

© Mouchel 2016

Plate 10C.90

View south west from Ballymackilroy towards Slieve Beagh.

Key Features:

- Ridge edge landscape of hummocky landforms, drumlins and small ridges derived from edge moraines
- Elevated yet protected settlement location with a strong sense of place
- Medium to large, irregular field pattern with many hedgerow trees and copses
- Wide prospects over the Clogher/Augher drumlin landscapes towards the Slieve Beagh hill mass

Description

This is a transitional area of landscape character between the low drumlin fields and river courses of the A4 corridor (LCSZ 10.1) and the hill summits of the Brougher Mountain/Slievemore Ridge (LCSZ 9.7). The area is comprised of locally deposited glacial moraines forming a series of hummocks and small ridges that meet with the broader, rolling slopes of the sandstone ridge. It is a managed, generally open pastoral farmland with many clusters of dwellings along local roads and tracks that either run with the contours or descend briskly from the ridge above.

The land is comprised of medium to large sized fields of an irregular pattern. Maintained hedges are the predominant means of enclosure, often with significant numbers of hedgerow trees that form a well vegetated local character. Coniferous plantations define the upper reaches of the hill slopes and the line of the exposed ridge summit.

The settlement of Ballymackilroy occupies an elevated position along the face of the ridge, enclosed within a distinct valley landform and a natural recess within the ridge line. The A5 corridor crosses this valley form as it descends from Shantavny Scotch towards Ballygawley, interrupting the historic settlement pattern as the road emerges from the ridge. There is sense of enclosure and

© Mouchel 2016

place, of longevity of settlement associated with this area signified by the cluster of raths and standing stones on hill forms to the south and east of the stream.

Sensitivity to Change

This is a distinctive area of settled landscape within the prominent landforms of the ridge line. The elevated valley character is a defined feature of the ridge, with some degree of visual separation from the broad drumlin landscapes to the south. Historic cultural associations are evident, while the presence of the existing A5 corridor is an intervention on local landscape character. The area has a good landscape quality and local value which has a **high** sensitivity to change.

© Mouchel 2016

LCSZ 10.1 – Clogher & Augher Drumlin Farmlands

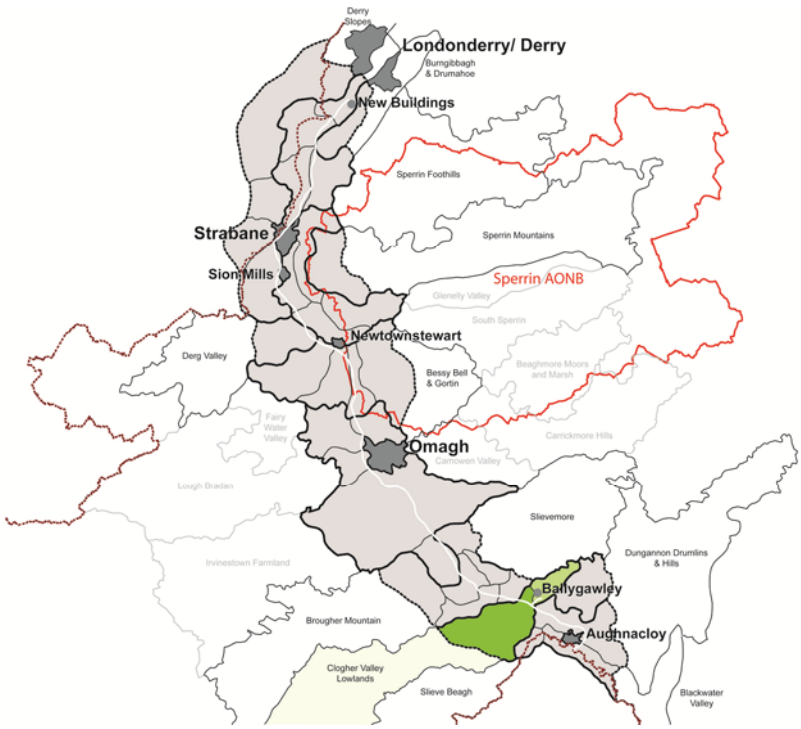

Plate 10C.91

View east along the A4 road corridor towards Augher.

Plate 10C.92

View looking south from the foot of the Brougher Ridgeline near Knockmany.

© Mouchel 2016

Plate 10C.93

View looking north north-west across the drumlin field towards Knockmany and Fernamenagh.

Key Features:

- Broad drumlin landscape of shallow, irregular terrain
- Brougher Ridgeline evident as continuous contextual element of landscape
- The A4 road corridor locally predominates
- Settlements dispersed along A4 corridor
- Largely concealed river pattern within drumlins

Description

This is a broad, shallow drumlin landscape in which the A4 corridor locally predominates. Its topography is less defined than that of more pronounced drumlin field locations further to the south and east, characterised by areas of flat and occasionally boggy ground between the numerous low hill mounds. The pattern of land cover is generally composed of medium to large field enclosures, with dispersed hedge lines and generally a low proportion of hedgerow trees. Some field enclosures are unmanaged, with scrubby grassland and sedge growth in areas. Small, scattered pockets of woodland punctuate the landscape, with occasional loughs (small lakes) formed between the deposited moraines.

Both Ballygawley Water and the River Blackwater transport runoff waters from the ridgeline and the neighbouring sandstone hill masses, from opposing directions. The landform is shallow and the terrain varied, with both river courses tending to be concealed within the topography of the drumlin fields and deposited moraines

The main settlements of Clogher, Augher and Ballygawley are located along the immediate A4 corridor. All are nucleated, although Clogher has an elongated form by virtue of road pattern. Elsewhere, dwellings and farmsteads are scattered throughout the landscape, linked by a network of tracks and small roads that run with the topography. Views across the area are typically contained by the shallow and rolling terrain, with the Brougher ridgeline evident to the north and Slieve Beagh rising to the south. The A4 runs parallel with the ridgeline from Clogher towards Ballygawley and is visible at distance from along the ridge. The A28 connecting Augher with

© Mouchel 2016

Aughnacloy skirts the progressively more defined drumlin fields that border the River Blackwater towards Slieve Beagh.

Sensitivity to Change

The drumlin and moraine landscapes are an expansive feature of the local landscape and part of the significant drumlin belts that span Ireland and Northern Ireland. The landscape is considered to be of a good quality and local value. The defined forms of the drumlins mean that in a local sense they are sensitive to landscape change; in a broader context, drumlin form can be effective at concealing landscape elements and reducing their impact on the broader character. The area is considered to have a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 10.2 – Ballygawley and Ballyreagh A4 Corridor

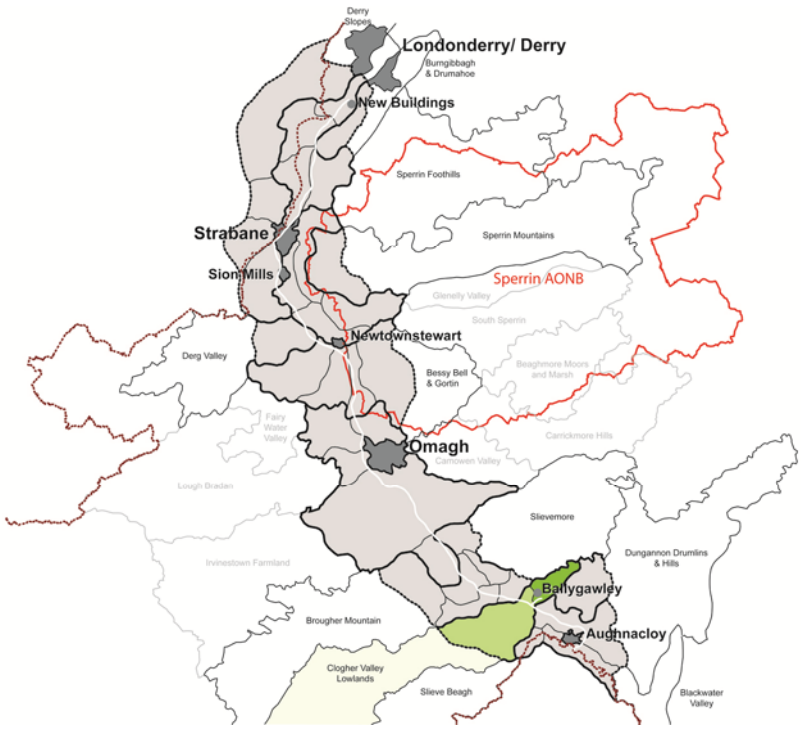

Plate 10C.94

View north across Martray Lough & House towards Legaroe.

Plate 10C.95

Narrowing of views eastwards along A4 at Ballyreagh.

© Mouchel 2016

Plate 10C.96

Descent northwards towards Ballygawley from Big Hill.

Key Features

- Narrowing valley form, flanked by hill masses
- Rounded drumlin landforms
- A4 road corridor locally predominates
- Ballygawley and the A4/A5 crossing are defining features of the valley landscape
- Concealed river form

Description

The rising A4 road corridor between Ballygawley and Ballyreagh marks a transition of landscape character from the wide, low undulating moraines and river landscapes associated with Augher and Clogher. Here, the hill slopes of the Brougher ridgeline are closer in proximity, with the hill forms of Big Hill and Aghnahoe Hill flanking the road corridor to the south. Rounded drumlin landforms punctuate the valley landscape, concealing the river course of Ballygawley Water to the immediate south of the A4.

The road corridor is abruptly contained by vegetation and landform to the south, whereas the north affords wider prospects across the valley towards the Killymorgan and Legaroe hill slopes. The landscape is largely pastoral, although the road corridor is bordered by several larger houses and estate landscapes with prominent woodland plantations. Martray Lough (associated with Martray House) is a conspicuous feature of this local corridor landscape. Field sizes are generally mid-sized and irregularly patterned, with dispersed hedge lines and numerous hedgerow trees that in combination with plantations give the impression of a well wooded landscape.

Ballygawley itself is a distinct, nucleated settlement bordering the junction of the A4 and A5, centred within the valley along the course of Ballygawley Water. The town has an appealing townscape quality, although one that is not a feature or reference within the wider landscape. Both of the major road corridors currently bypass the town in close proximity and tend override

© Mouchel 2016

impressions of the town's context. The A5 is conspicuous as it rises in elevation towards Lisgonnel and the Brougher Ridgeline.

Sensitivity to Change

The overriding character is of well vegetated and pastorally farmed valley landscape, often seen in context from the flanking hill slopes. The presence of estate landscapes lends a varied and appealing quality, although the major road corridors are conspicuous local features. The drumlin and moraine deposits are an expansive feature of the regional landscape, locally sensitive to landscape change though in a broader context effective at concealing change. The area has a good landscape quality and local value which has a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ 11.1 – Black Hill and Aughnacloy Drumlins

Plate 10C.97

View looking west across an elevated and irregular drumlin landscape from Aghaloo Church.

Plate 10C.98

View looking south towards Aughnacloy.

© Mouchel 2016

Plate 10C.99

View looking east along Rehaghy Road (east of Aughnacloy).

Key Features:

- Distinctive hummocky, drumlin landforms rising towards rolling hill slopes
- Mixed pasture related to landform and aspect
- Irregular field sizes bounded by often fragmented and outgrown hedge lines
- A5 corridor contained within drumlin landforms, occasional far reaching vistas towards Slieve Beagh hills

Description

From Ballygawley to Aughnacloy, the A5 road corridor passes through a series of defined drumlin and hummocky moraine deposits that border the hill masses of Branny Hill and Rehaghy Mountain. The area is transitional from the drumlin landscape of the River Blackwater (see LCSZ 11.2) with the isolated drumlin landforms becoming more pronounced in nature and the terrain progressively more elevated.

From Black Hill southwards the A5 is contained by this drumlin pattern. Occasional expansive views towards Slieve Beagh across the Blackwater drumlins are revealed, giving this area a sense of separation and position in relation to the surrounding landscape. The influence of the A5 road corridor is accordingly confined and its impacts on the wider landscape setting are limited. Near Aughnacloy, the drumlin landform becomes less distinct in comparison with the River Blackwater drumlin landscape, with roads leading east of the town rising towards Carnteel along a shallow and enclosed river valley landscape.

The area throughout is predominantly pastoral farmland within a framework of irregular and sometimes intimate field patterns, bounded by a mix of managed and outgrown hedges. Tree cover is confined to field boundaries and occasional wooded copses scattered within the field pattern on hill slopes. Farmsteads and dwellings are numerous and scattered across the landscape around principal roads and tracks.

© Mouchel 2016

Sensitivity to Change

The overriding character is of a cohesive and visually appealing drumlin landscape rising to higher hills. The drumlin and moraine landscapes are an expansive feature of the local landscape and part of the significant drumlin belts that span central Ireland and Northern Ireland. The existing A5 road corridor is a feature of the setting although its influence on the wider landscape is constrained due to the nature of the drumlin terrain. In this broad sense, drumlin form is effective at concealing landscape elements and reducing cumulative impacts on landscape character. However, the distinct topography of the drumlin landscape is sensitive to intervention. The area has a good landscape quality and local value which has a **moderate** sensitivity to change.

LCSZ 11.2 – Blackwater Drumlins

Plate 10C.100

The locally irregular field pattern and managed hedge lines typical of the character zone.

Plate 10C.101

View looking south across low drumlin landscape towards the River Blackwater, at the northern limit of the LCZ.

© Mouchel 2016

Plate 10C.102

View looking north to the drumlins of Ravellea surrounding the river plain, characteristic of the Blackwater drumlin landscape.

Key Features:

- Rounded, dispersed drumlin landforms becoming more distinctive to the south
- Cohesive landscape quality with a consistent pattern of land cover
- Irregular field sizes bounded my maintained hedge lines
- Localised river plains becoming evident
- Rich historic cultural landscape

Description

This is an area of cohesive pastoral farmland set within a pronounced drumlin field and river landscape.

The area has an open, dispersed drumlin pattern that is bisected by the River Blackwater. Well defined, managed hedgerows with isolated trees accentuate the rolling drumlin topography, creating a patchwork of field patterns and engendering a strong sense of place. Farmsteads are scattered within a framework of irregular and sometimes intimate field patterns, with occasional clusters of dwellings around principal roads and tracks. The area is often separated visually from surrounding hill masses, with many intimate and enclosed local landscapes within the drumlin landforms.

Across this landscape the River Blackwater traces a tortuous south-easterly course, often concealed by landform. Narrow river margins and plains become more regular and extensive, giving the drumlins a more dispersed and locally defined character around the river corridor to the south.

Raths are a frequent and visible characteristic of the area, adding further definition to the drumlin landforms and to the sense of place and local cultural identity. These are evident as circular tree groupings and physical settlement landforms that sit atop the drumlins, a conspicuous feature of an already defined landscape type.

© Mouchel 2016

Sensitivity to Change

The overriding character is of a highly cohesive and visually appealing drumlin landscape. The drumlin and moraine landscapes are an expansive feature of the local landscape and part of the significant drumlin belts that span central Ireland and Northern Ireland. In a broad sense, drumlin form can be effective at concealing landscape elements and reducing cumulative impacts on landscape character. However, the distinct nature of the drumlin pattern and the local sense of place in this river drumlin landscape increases the area's sensitivity to landscape change. The area has a very attractive landscape quality and local though potentially county value which has a **high** sensitivity to change.

LCSZ 11.3 – Favour Royal Forest

Plate 10C.103

A distant prospect of Favour Royal Forest, viewed from Big Hill to the east of the existing A5

Plate 10C.104

Fragmented patterns of woodland and farmland within Favour Royal Forest.

© Mouchel 2016

Plate 10C.105

Woodland and forestry plantations within the forest area.

Key Features:

- Area of extensive coniferous and broadleaf woodland plantation
- Rolling drumlin topography
- Visually prominent as a woodland belt within the wider landscape
- Historic associations and recreational focus

Description

Favour Royal and Derrygorry Forests are located in the drumlin landscapes south of the River Blackwater, a broadly linear network of mixed coniferous and deciduous woodlands that span the Irish border from Fort Hill at Cullenbrone southwards towards the hill forms of Slieve Beagh. The townland of Favour Royal Demesne in which the forest is sited dates from circa 1655, deriving its name from Favour Royal Bawn, a large fortified mansion who's ruins stand in Lismore on the northern side of the Blackwater (Favour Royal was named following the granting of the land as a royal favour from James 1st). The area has a rich cultural heritage dating back to its former use as a Druid site.

The drumlin topography associated with the forest is typical of the surrounding landscape and landforms (see LCSZ's 10.1 and 11.2). The terrain rises progressively from the River Blackwater, the forest areas collectively visible at distance from the surrounding hill masses and to widespread views within the local drumlin topography. There is a clear distinction between the woodland belt and surrounding open drumlin farmlands, although within the forest area there is a large degree of fragmentation between plantations.

The presence of broadleaved woodland has been long associated with the area. Both Favour Royal and Derrygorry are managed forests and part of the Millennium Forests initiative, aimed at restoring Northern Ireland's native woodlands. This has seen new tree planting of over 500,000 native trees in recent years. The area is a significant recreational resource for local populations and there is extensive provision in terms of user facilities and historic/natural features of interest.

© Mouchel 2016

Sensitivity to Change

The area has a rich cultural and historical significance locally, also as a valuable recreational resource. It holds a distinctive character as a collective area of forest within the wider drumlin landscape. The landscape is of good quality and county value, it is considered to have a sensitivity to change in the order of **high**.

© Mouchel 2016

LCSZ 12.1 – Branny Hill

Plate 10C.106

Elevated hill top view north-west across to the Brougher Ridge.

Plate 10C.107

Farmland on the plateau of Big Hill, with the Brougher Ridge a distant backdrop.

© Mouchel 2016

Plate 10C.108

View west from the plateau of Big Hill.

Key Features:

- Broad, rolling hilltop landform separated by radial, shallow valley forms
- Open, pastoral farmland with varied hedgerow management and tree cover
- Dispersed, scattered farmsteads and dwellings
- Widespread views to surrounding hill masses and ridge lines

Description

This is a landscape of unusually broad drumlin topography, characterised by a series of steep and rounded hill summits that rise above a varied pattern of drumlins and deposited moraines. Underlain by the same sandstone as the ridgeline geology of Slievemore and Lurganmore to the north, the area comprises several rounded hill summits separated by shallow valleys that radiate outward around the hill mass.

The landscape is typically pastoral, open farmland with a mixture of field sizes that are variable in pattern, bounded by hedge enclosures that vary in quality and appearance. Some are well maintained, others outgrown and some predominantly treed. Where field sizes are more compact, this gives rise to the appearance of a well vegetated pastoral hill farmland. Occasional field enclosures are un-grazed, characterised by rough grass and sedge.

Primary access tracks tend to be direct and run with the landform. Settlement is sparse, limited to scattered farm dwellings and outbuildings across the hilltop generally. An isolated engineering works to the north west of the landform is a departure from those features typical of the LCSZ, an elevated and conspicuous building form that is exposed to views at distance from the Brougher Mountain ridgeline. Views are widespread in all directions from the limits of the various hill tops.

Sensitivity to Change

The elevation of the hill group makes this a conspicuous and defining feature of the landscape, although less significant in scale than the neighbouring Slievemore to the north or the more distant

© Mouchel 2016

Slieve Beagh to the west. The landscape is considered to be of a good quality and local value, it is considered to have in the order of a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ U1 – Strabane and Lifford

Plate 10C.109

The urban fringe setting of Strabane and its recently constructed bypass. The rounded summit of Croaghan Hill is visible on the skyline.

Plate 10C.110

The elevated, residential fringe of Strabane in context with Knockavoe Hill (LCSZ 4.1).

© Mouchel 2016

Plate 10C.111

Commercial development along the river edge within Strabane.

Key Features:

- Comprises the urban settlements of Strabane and Lifford
- Recent urban expansion forms a typically defined urban fringe with the adjoining farmland
- Historical core north of the river with more recent development extending to the south and expanding to higher ground to the east
- Dominant feature are the river corridors of the Mourne and Finn that converge to form the large Foyle valley
- Heavily constrained by the river valleys and steeply rising landform both to the west and east

Description

A zone comprising the urban settlement and towns of Strabane and Lifford. The historical core of Strabane lies to the north of the Mourne River with more recent development extending to the south and north of the town and increasingly to higher ground to the east. Urban development comprises several extensive housing estates linked by expanding urban roads and broken by typically urban fringes characteristics such as cemeteries, schools and golf courses. Despite this the edge of the urban development is generally well defined with the surrounding countryside and numerous dwellings are afforded views of the River Foyle and Croaghan Hill to the west and the hill slopes of Knockavoe to the east.

The dominant features of the zone are the Rivers Mourne and Finn that converge between the two towns to form the larger Rive Foyle. The Mourne River in particular has a significant impact on the town of Strabane forming a break in the town immediately south of the town centre and crossed only by a single bridge in the centre and by a new town bypass that extends to the west of the town and accommodating the existing A5 corridor.

Lifford lies on lower ground with the majority of the development occurring to the north of the junction of the N14 and N15. When viewed from the east the town itself appears well wooded as a result of a number of larger properties that are bounded by extensive areas of mature planting. A noticeable feature of the town is the angular structure of the greyhound stadium that forms the tallest and distinctive feature of the local skyline.

© Mouchel 2016

Sensitivity to Change

The area has an unremarkable townscape and local value. It is considered to have a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ U2 – Sion Mills

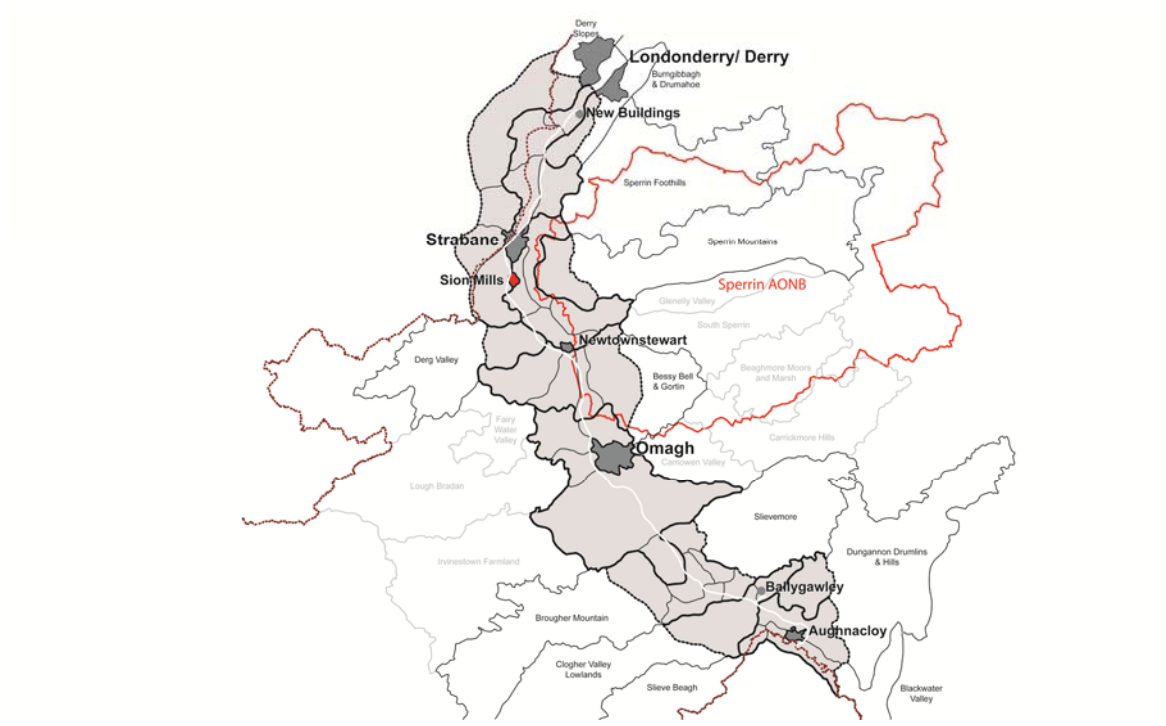

Plate 10C.112

View towards Sion Mills from the east of the Mourne River, revealing the industrial heritage of the town and its context with Urney Hill beyond.

Plate 10C.113

The rural context of Sion Mills on the edge of the Mourne Valley.

© Mouchel 2016

Plate 10C.114

New development of the western fringes of Sion Mills.

Key Features:

- Historic, planned settlement
- Sion Mills Conservation Area
- Single and two storey mill worker cottages
- Open space of the church square, town park and riverside space
- Tree lined A5

Description

A zone comprising the villages of Sion Mills and Glebe. Sion Mills is located to the south of Strabane and situated on the A5 it is surrounded by pastoral farmland to the north and south, the Mourne River to the east and the small village of Glebe to the west. Sion Mills is a small, tree lined industrial village rich in heritage and settled in the Mourne valley, flanked by surrounding hills with the broad hill mass of Tullywhisker to the west and Meenashesk in the distance to the east. It is a planned village layout founded in the 1830s, located on and utilising the Mourne River, which flows to the east, to drive the large mills on the rivers banks. Single and two storey mill workers cottages are distinctive historical features of the village, extending on narrow streets westwards from the existing A5 corridor on which local businesses are now located. A large, 5 storey stone mill building with tall brickwork chimneys dominate views across the river bank to the east of the village. The village also constitutes historic homes of mill owners, churches, an attractive church square, stables, a clock tower, a gate lodge and town park. The existing A5, which runs through the village centre is characterised by an avenue of tall horse chestnut trees. All these features contribute to the villages strong sense of place and industrial heritage.

Rising hill slopes and adjacent farmland can be viewed nearby to the west through and on the edge of new housing estates, which have developed on the peripheries of the village. The small village of Glebe sits on the rising slopes above Sion Mills a few hundred metres away to the west, the two villages divided by a narrow belt of pastoral farmland and connected by the steep Primrose Park Road. Constituting predominantly two storey semi detached and detached properties Glebe is well contained by surrounding landform and vegetation and only outlying properties on the eastern edge affording broad views across the Mourne valley and over Sion Mills.

© Mouchel 2016

Sensitivity to Change

The area has a good townscape quality, of local though potentially county value. It is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ U3 – Newtownstewart

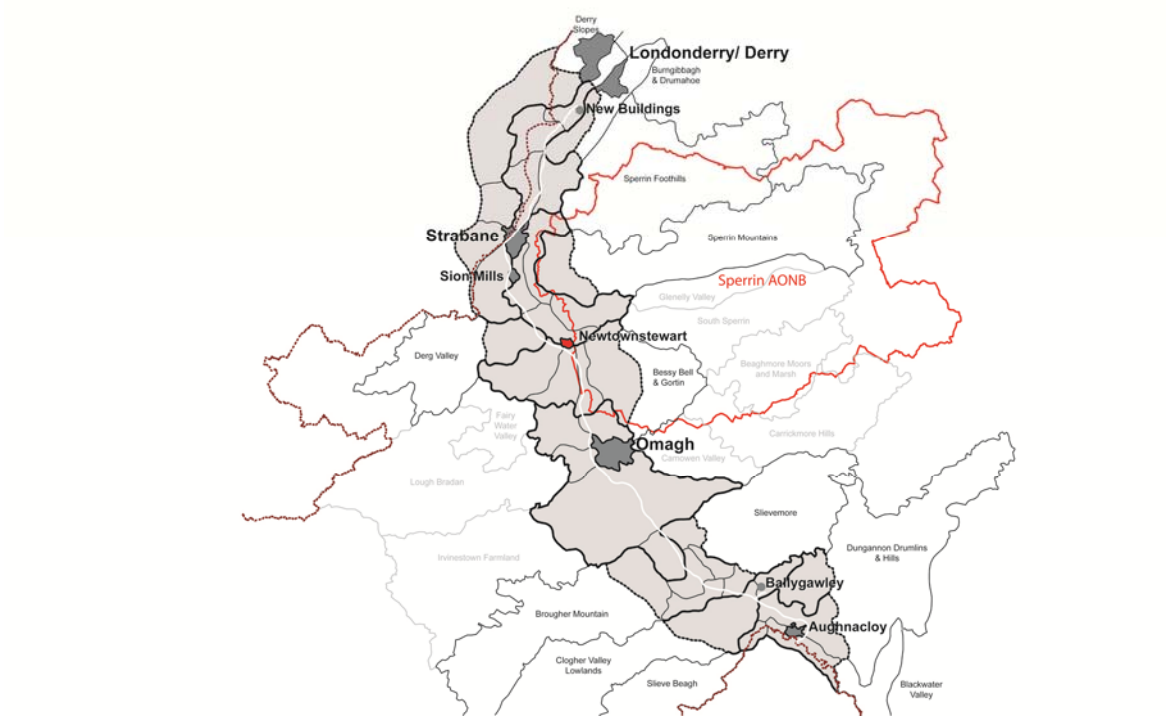

Plate 10C.115

View overlooking Newtownstewart, St Eugenes Church and lower lying farmlands beyond.

Plate10C.116

The context of Newtownstewart from the River Strule, with Bessy Bell a distant prospect.

© Mouchel 2016

Plate 10C.117

View across the River Strule towards Newtownstewart, with the profile of Bessy Bell beyond.

Key Features:

- Historic Plantation town from the 17th century
- Low rise, simple terraces typically rendered and painted
- Settled on the Mourne River on the southern fringes of a wide floodplain landscape
- Local lanes and streets rising to the west out of the river valley
- Numerous cultural features such as the remains of Harry Avery's Castle, the 'Old Bridge' and Main Street.

Description

The settlement of Newtownstewart lies on the western banks of the Mourne River, located between Strabane and Omagh within a broad floodplain landscape. Founded in the 17th century the town has a rich heritage and is described as a Plantation town with a church at one end and castle at the other. Its main street was laid out on the edge of the river escarpment in plantation times in the 17th century to formerly link the castle and church. It retains its character and wide layout to this day, lined by 2 to 3 storey painted and rendered terraces with a stepped appearance as the street runs downhill towards the river. The row of terraces fronting the main street are now predominantly occupied by local businesses.

Extending north from the Main Street is Castle Brae, which crosses the river on the 'Old Bridge', a characteristic 6 arch stone bridge built in 1727. The surrounding streets leading onto Main Street feel narrow due to mainly low rise residential uses built to the rear of the pavements. To the west the residential lined streets follow the rising landform towards Bessy Bell and the ruins of Harry Avery's Castle. The ruins of Harry Avery's Castle have sat on an undulating ridgeline overlooking the town since 1689 when the castle was set ablaze. It forms an impressive silhouette in the skyline beneath the summit of Bessy Bell and can be seen from Newtownstewart and surrounding low lying landscape to the east and south, providing a visual link to Newtownstewarts heritage.

© Mouchel 2016

New housing has been developed to the south and west of the towns centre, outside of the Newtownstewart Conservation boundary. The towns' core is sparsely vegetated due to buildings backing directly onto the pavement. This allows for views out and an appreciation of the surrounding countryside and hills, particularly from Main Street.

Sensitivity to Change

The area has a good townscape quality and local though potentially county value. It is considered to have a **high** sensitivity to change.

© Mouchel 2016

LCSZ U4 – Omagh

Plate 10C.118

Housing on the residential fringe of Omagh is occasionally exposed, meeting abruptly with adjacent farmland.

Plate 10C.119

Residential development elsewhere on the town's fringe is contained by landform and vegetation.

© Mouchel 2016

Plate 10C.120

Housing on drumlin rises give wider reaching prospects for some residential development.

Key Features:

- Important regional centre, both commercially and administratively
- Lies at the confluence of the main rivers Strule and Camowen
- Rolling landform remains evident within the town and limits broader views of the surrounding countryside
- Fragmented urban fringe interspersed with remnant farmland

Description

Omagh represents one of the regional urban centres for this part of Northern Ireland and comprises a central core that includes the commercial and administration centres for the region. The urban core, characterised by the landmark of its twin towered church is surrounded by a number of suburbs and light industrial areas, some of which are recent additions and encroach on open land to the fringes of the town. The existing A5 corridor runs centrally within the town, largely divorced from the townscape of the commercial centre where it runs in deep cutting.

Physically the town is bounded by the rising slopes of the Sperrin Hills to the east, the defining landforms of the Strule valley to the north and drumlin farmland to the west and south. The town centre lies at the confluence of the Rivers Strule and Camowen, both of which have been heavily canalised although several bridges in the town afford views of the river as it meanders through the urban centre.

To the west of the town and of relevance to the study area for landscape character, the urban fringe is fragmented by a number of recent housing developments interspersed with remnants of farmland and areas of scrub and woodland. The rolling landform limits broader prospects of the surrounding countryside from within the town, with open views typically limited to the outer fringe of the housing developments that border the drumlin farmland.

© Mouchel 2016

Sensitivity to Change

The area has an unremarkable townscape quality and a local value. It is considered to have a **moderate** sensitivity to change.

© Mouchel 2016

LCSZ U5 – Aughnacloy

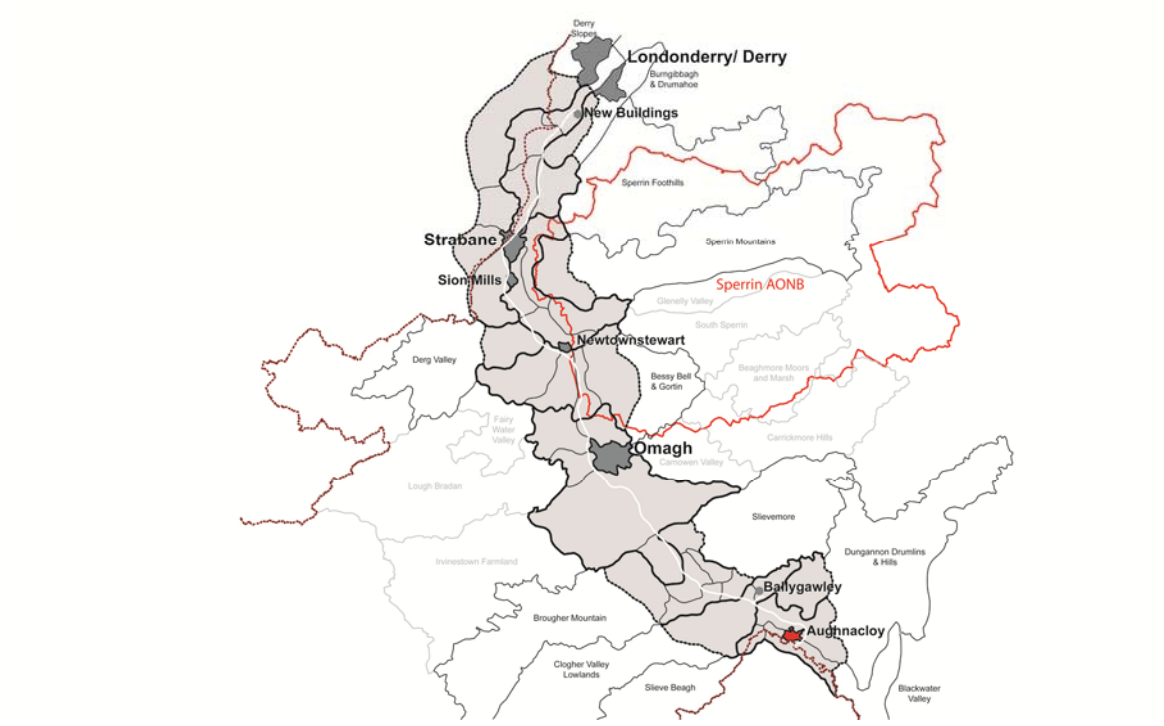

Plate 10C.121

View looking east towards Aughnacloy.

Plate 10C.122

View from Aughnacloy looking west across the Aughnacloy "Thistle".

© Mouchel 2016

Plate 10C.123

View north along Moore Street, through the town centre.

Key Features:

- Nucleated settlement located on local rise in drumlin landform
- Confluence of watercourses in vicinity of Aughnacloy
- Open, flat and shallowly undulating inter-drumlin landform bordering Aughnacloy and the River Blackwater
- Broad panoramic over extensive drumlin field topography towards Slieve Beagh

Description

Aughnacloy is a compact and nucleated town with surrounding clusters of dwellings, located on a local rise in landform to the east of the River Blackwater. The settlement borders a flat river plain to the west from which it has an elevated prospect. Less distinct, rising drumlins and moraine deposits surround the town to its north and east, interrupted by a number of shallow stream courses that converge at Aughnacloy. The River Blackwater to the west is contained by the drumlin landscape and is not a conspicuous feature (see LCSZ 11.2). This is typically a setting of low, broad rolling drumlin landforms interspersed by flat areas of boggy and marshy ground with improved pastures. The field pattern surrounding the town is irregular, with a sparse mix of managed and outgrown hedges comprising a relatively low proportion of hedgerow trees. Occasional blocks of mixed woodland flank and top some of the defined nearby drumlin hill forms.

The town itself is centred along a wide and regular main street, with distinctive townscape qualities that are made prominent by virtue of its aspect. To the west, the fall to the river plain is abrupt and defined by a distinct settlement edge. The church towers/spires of the town are characteristic features, particularly viewed from the drumlins of the River Blackwater and approach routes to the town. The Slieve Beagh hill mass provides a distant backdrop to a progressively more expansive and panoramic landscape prospect.

© Mouchel 2016

A designed landscape in the form of a large “thistle” pattern is a peculiar feature linked to the town, extending out across the broad expanse of shallow land to the west of the town edge. A cluster of farm buildings/dwellings occupies the highest point of the feature. Despite its scale, the geometric form of the field pattern is not a highly evident nor intrusive feature on the surrounding landscape.

Sensitivity to Change

The settlement of Aughnacloy has a distinctive townscape quality and a defined setting. There is a strong sense of place and location, both from within the town and from the surrounding landscape where its distinctive spires are a visual locator. The town has a good landscape/townscape quality and a local though potentially county value. It is considered to have a **high** sensitivity to change.

New Buildings

Coordinates

54°57'48.75"N, 7°22'46.74"W

Landscape Character Zones

LCZ 1 - Lower Foyle Valley

Description:

The viewpoint is taken from Ballougry Road on the western margin of the River Foyle, looking across the river valley towards the settlement of New Buildings. The river corridor setting is defined as an “Area of High Scenic Value”, an area noted for its contribution to the setting and landscape of the City of Londonderry. The open context of view across the valley is broadly similar from New Buildings south to the village of Magheramason.

The Proposed Scheme would run across the line of view from New Buildings, mainly in shallow sidelong cutting through the open fields that separate the river from the town and the existing A5 corridor.

Bessy Bell and Newtownstewart viewed from the River Strule

Coordinates

54°43'13.21"N, 7°22'8.31"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

Bessy Bell is a prominent landform within the landscapes to the north of Omagh. Here it is viewed as a backdrop to the town of Newtownstewart located on the fringe of the River Strule floodplain. Harry Avery's Castle and its associated landforms define a characteristic skyline above the town.

The Proposed Scheme would pass to the far side of Newtownstewart from this viewpoint, immediately beyond Harry Avery's Castle in cutting and then across the low hill plateau visible in the middle distance to the front of Bessy Bell.

Harry Avery's Castle

Coordinates

54°42'20.07"N, 7°22'45.46"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The viewpoint is taken from Gortgranagh Road to the south of Newtownstewart, the road rising above the town on the lower slopes of Bessy Bell. Harry Avery's Castle is visible to the left of the view, situated on a low crest line above the town. The wider landscape takes in the Mourne River valley and the distant rise of the Sperrin Hills (part of the Sperrin AONB).

The Proposed Scheme would pass in cutting immediately to the left of Harry Avery's Castle, before running into the direct foreground of the view where Gortgranagh Road would divert to join with Glen Road.

View east from Bessy Bell across the Strule Valley

Coordinates

54°41'53.51"N, 7°22'46.68"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The viewpoint is taken from Gortgranagh Road, on the slopes of Bessy Bell above the valley of the River Strule. From this vantage point both the River Strule and adjacent A5 corridor are hidden from view, set low and beyond the local crest line within the view. Mary Gray rises in the middle distance, defining the separation between the Strule and Owenkillew river valleys.

The Proposed Scheme would pass along the line of the crest, in cutting and just beyond the farm buildings which are evident in the foreground of the view. Grange Road would be diverted locally to the north (left of the view) to form an over bridge across the dual carriageway.

Viewpoint 13

Bessy Bell viewed from Carrigans Road

Coordinates

54°40'47.81"N, 7°20'48.45"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The viewpoint from Carrigans Road looks across the River Strule and the line of the existing A5 corridor, towards the east-facing hill slopes of Bessy Bell. The majority of this landscape, up to the line of Castletown Road (below the hill crest line within the view) falls within the boundary of the Sperrin AONB. Wind turbines, just outside of AONB boundary on the higher hill slopes are prominent features within the wider landscape, in particular from the south when approached from Omagh.

The Proposed Scheme would fall within the boundary of the AONB at this location, running in sidelong cutting and embankment above the line of the existing A5 and below Castletown Road.

View east from Bessy Bell towards Deers Leap

Coordinates

54°40'33.61"N, 7°21'33.11"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The viewpoint is taken from Castletown Road, the location providing an elevated and panoramic prospect over the course of the River Strule and towards the wide, domed hill profile of Deers Leap. The existing A5 corridor runs just above the course of the River Strule, it's line discernable just beyond the Mellon Inn in the lower foreground of the view. The distant backdrop of the higher Sperrin Hills defines the context of the Sperrin AONB, of which all of this visible landscape forms a part.

The Proposed Scheme would run across and below this line of view, in sidelong cutting within the foreground of open fields between the existing A5 and the viewpoint.

Drumlegagh Road South

Coordinates

54°37'41.48"N, 7°20'51.17"W

Landscape Character Zones

LCZ 8 - Omagh Drumlin Farmlands

Description:

The viewpoint from Drumlegagh Road South is typical of the open, farmed drumlin landscapes that surround Omagh. Low rises, well vegetated hedgerows and a “basket of eggs” topography are characteristic of the landscape, with distant hill crests providing a point of reference.

The Proposed Scheme would converge on Omagh through this landscape. In this viewpoint it would cut through the local drumlins, remaining at a low level towards a grade separated junction with the existing A5 corridor to the north of Omagh.

Coordinates

54°35'22.55"N, 7°19'19.41"W

Landscape Character Zones

LCZ 8 - Omagh Drumlin Farmlands

Description:

The well vegetated drumlin farmlands that surround Omagh serve to contain the town visually. The viewpoint shows the typical rounded and pronounced character of this drumlin terrain, through which the primary routes that radiate from the town pass through.

The Proposed Scheme, in bypassing Omagh would cross over the A32 Clanabogan Road at this point, forming a grade separated junction with the dual carriageway cutting laterally through the drumlin landform.

Tullyrush Road

Coordinates

54°32'34.91"N, 7°14'44.44"W

Landscape Character Zones

LCZ 8 - Omagh Drumlin Farmlands

Description:

Tullyrush Road is one of a network of minor roads that cross the broad drumlin farmlands south of Omagh. The landscape is consistent in character and visually contained, with very few points of reference and only occasional prospects toward the more distant and substantial surrounding hills of the Sperrins and Brougher Ridge.

The Proposed Scheme would cross Tullyrush Road on embankment across this line of view, its vertical alignment passing from embankment to cutting as it negotiates the varied drumlin terrain.

REPRODUCED FROM ORDNANCE SURVEY OF NORTHERN IRELAND'S DATA WITH THE PERMISSION OF THE CONTROLLER OF HER MAJESTY'S STATIONERY OFFICE, © CROWN COPYRIGHT AND DATABASE RIGHTS NIMA ES&LA214. UNAUTHORISED REPRODUCTION INFRINGES © CROWN COPYRIGHT AND MAY LEAD TO PROSECUTION OR CIVIL PROCEEDINGS

Moylagh

Coordinates

54°31'31.61"N, 7°13'3.54"W

Landscape Character Zones

LCZ 8 - Omagh Drumlin Farmlands , LCZ 9 - Brougher & Slievemore Ridge

Description:

The clustered settlement of Moylagh on the B46 is situated at a point of transition from the farmed drumlin landscapes south of Omagh to the higher, more pronounced terrain of the Brougher Ridge. The viewpoint is directed in a south-west direction from Meenmore Road, overlooking the properties within the settlement. There are distant prospects of Crocknatummoge Hill between the locally prominent hill rises that flank Moylagh to its immediate west.

The Proposed Scheme would cross the line of view just beyond the village setting, set on embankment and forming a grade separated junction with the B46. The dual carriageway would be contained in deep cutting to either side.

Newtownsaville and Tullanafoile

Coordinates

54°29'0.50"N, 7°10'45.01"W

Landscape Character Zones

LCZ 9 - Brougher & Slievemore Ridge

Description:

Newtownsaville is located on shallowly rising ground towards the remote Brougher Ridge near Knockmany Forest, flanked to its east by the low crest of Tullanafoile Hill and Garvaghy Big Hill beyond. The viewpoint, taken from Newtownsaville Road looks east towards Tullanafoile, across pasture and areas of localised bog on the lower lying ground.

The Proposed Scheme would pass just to the east of Newtownsaville, following the western rise of Tullanafoile Hill on low to moderate embankment towards Tycanny.

REPRODUCED FROM ORDNANCE SURVEY OF NORTHERN IRELAND'S DATA WITH THE PERMISSION OF THE CONTROLLER OF HER MAJESTY'S STATIONERY OFFICE, © CROWN COPYRIGHT AND DATABASE RIGHTS NIMA ES&LA214. UNAUTHORISED REPRODUCTION INFRINGES © CROWN COPYRIGHT AND MAY LEAD TO PROSECUTION OR CIVIL PROCEEDINGS

Errigal Keerogue viewed from Glenhoy Road

Coordinates
54°27'22.47"N, 7° 5'52.24"W

Landscape Character Zones
LCZ 9 - Brougher & Slievemore Ridge

Description:

The viewpoint from Glenhoy Road looks north towards the hill slope setting of Errigal Keerogue Church, a State Care Monument located on the south facing slopes of the Brougher Ridge, near Ballynasaggart. The remains of the church and graveyard have an open aspect with panoramic views across the drumlin farmlands to the south (see View 23).

In this view, the Proposed Scheme would emerge from heavy cutting to the west of the church (the fields to the left of the image) and pass in the immediate foreground in front of Errigal Keerogue, set low within the landscape at this point of crossing. Glenhoy Road (the viewpoint location) would be diverted to pass over the dual carriageway on an over-bridge to the immediate east of Errigal Keerogue.

Feddan Road

Coordinates

54°27'14.00"N, 7° 3'37.34"W

Landscape Character Zones

LCZ 10 - Clogher Valley

Description:

The view from Feddan Road looks across a localised area of drumlin landscape within the Clogher Valley, between Ballynasaggart and Ballygawley. The drumlin topography here is locally broader than elsewhere, with large open fields and managed hedges with relatively few trees.

The Proposed Scheme would pass predominantly at grade through this area of drumlin farmland, across and below the line of view towards the junction with existing and recently upgraded A4 corridor to the west of Ballygawley.

REPRODUCED FROM ORDNANCE SURVEY OF NORTHERN IRELAND'S DATA WITH THE PERMISSION OF THE CONTROLLER OF HER MAJESTY'S STATIONERY OFFICE, © CROWN COPYRIGHT AND DATABASE RIGHTS NIMA ES&LA214. UNAUTHORISED REPRODUCTION INFRINGES © CROWN COPYRIGHT AND MAY LEAD TO PROSECUTION OR CIVIL PROCEEDINGS

Old Chapel Road, Aughnacloy

Coordinates

54°25'50.43"N, 6°59'36.28"W

Landscape Character Zones

LSZ 11 - Blackwater Valley

Description:

A cohesive drumlin farmland landscape surrounds the town of Aughnacloy, with the narrow floodplain of the River Blackwater to its west and higher drumlin terrain to its east. The viewpoint from Old Chapel Road is located to north-west of the town, set within a fold line of drumlins that divides the existing A5 corridor from the A28 Favour Royal Road as they converge on Aughnacloy.

The Proposed Scheme would run on low embankment along this fold line, entering cutting to the immediate east of Old Church Road (left of the view image). Old Church Road would itself be re-aligned to rise over the dual carriageway via an over-bridge.

APPENDIX 10E – VISUAL EFFECTS SUMMARY TABLES

Appendix to be read in conjunction within Fig 10.10 (Visual Context Overview), Figs 10.18 - 10.23 (Visual Effects Overview) and Figs 10.24 - 10.83 (Visual Effects in Year of Opening & Design Years)

The description of visual effects is divided into the following lengths:

V1 New Buildings to Burn Dennet

V2 Burn Dennet to Strabane

V3 Strabane & Lifford

V4 Strabane to Sion Mills

V5 Sion Mills to Ardstraw

V6 Ardstraw to Newtownstewart

V7 Newtownstewart to Mountjoy

V8 Mountjoy to Gillygooley Road

V9 Gillygooley Road to Doogary

V10 Doogary to Moylagh

V11 Moylagh to Newtownsaville

V12 Newtownsaville to Errigal

V13 Errigal to Ballygawley

V14 Ballygawley to Aughnacloy

V15 Aughnacloy

© Mouchel 2016

V1 – New Buildings to Burn Dennet

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Construction Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V1-01	**1**	Properties adjacent to the A5, overlooking the road and the river.	Residential properties with rear facing views overlooking the existing A5 and filtered views towards the river.	The roundabout setting would not feature in the immediate context of views from these properties.	**SA**		**7**						**7**				
V1-02	**1**	Properties on rising ground to the northern residential edge of New Buildings	Filtered views across the River Foyle, fragmented by adjacent properties.	Properties would experience oblique and fragmented views of road to the river edge south of the junction at New Buildings. There would be no marked effect on views from properties at the Design Year.	**SA**			**6**					**6**				
V1-03	**1**	Dwellings on Stoney Path	Detached dwellings with varying views of the existing A5 and the river valley beyond.	Properties would have acute views toward the roundabout setting, although the immediate context of the A5 would change very little.	**MA**			**14**					**11**	**3**			
V1-04	**1**	Dwellings off Stoney Path	Detached dwellings overlooking the A5 and filtered views of the river beyond.	Properties would have indirect views of the roundabout setting. The roundabout itself would be a minor component of these views, the effect of which would reduce as planting matures.	**LA**				**6**					**6**			
V1-05	**1**	Receptors to the west of the existing A5	Properties generally have awareness of the existing A5 to the east and direct views of the river to the west.	Properties would be exposed to the roundabout and main carriageway, the extent of impact on each property varying with the assessed importance of outlook in the direction of the Scheme, the presence of existing mature vegetation and whether the Scheme is above or below the line of view. Effects would reduce over time as planting to the roundabout setting matures.	**LA**			**1**	**1**	**5**			**1**	**2**	**4**		
V1-06	**1**	Receptors to the fringes of the village	Awareness of the existing A5 and the river beyond, interrupted or enclosed by adjacent buildings.	Views towards the Scheme would be largely filtered by buildings and boundary vegetation, with limited change to the outlook. The effect in the longer term would be neutral as vegetation matures.	**SA**			**8**					**8**				
V1-07	**1**	Properties to the west of New Buildings (Edgewater)	Properties along Edgewater and Victoria Road have slightly elevated, uninterrupted rear facing views across this farmland, taking in the river and the rising profile of Ballougry Hill beyond	The Scheme would emerge from minor cutting along the river margin and would interrupt the direct field of view for most properties at a distance of approx 200m. The largely rural prospect of the river and Ballougry Hill would be fragmented, although the hills would remain the primary focus. Hedgerow reinstatement with a high proportion of hedgerow tree planting would be in character with the agricultural landscape and serve as a partial screen to traffic movement.	**LA**	**5**	**2**		**1**	**29**		**5**	**2**	**1**	**29**		
V1-08	**1**	Properties fronting the A5 south of New Buildings	Views across the floodplain landscape to the west of the A5	Views from the properties are focussed on the existing A5 corridor. The proposed junction roundabout would be in cutting and the main line visible within restricted fields of view. Hedgerow reinstatement would serve as a screen to traffic movement by the Design Year.	**LA**		**1**	**2**				**2**	**1**				
V1-09	**1**	Existing properties immediately adjacent to the existing A5	Views of the existing A5 immediately adjacent, awareness of the river to the west and hills beyond	The new roundabout construction on the existing A5 and link road to the Proposed Scheme mainline would be evident within views. The mainline roundabout and carriageway would be mostly in cutting and would not unduly interrupt views toward the river, although traffic movement would be evident. Hedgerow reinstatement with a high proportion of hedgerow tree planting would be in character with the agricultural landscape and serve as a partial screen to traffic movement.	**LA**	**2**			**3**			**2**		**3**			
V1-10	**1**	Existing properties immediately adjacent to	Rear facing views of farmland and the river beyond and hills.	The Proposed Scheme mainline would run along the river margin at approx 200m from the properties, in minor cutting. The largely rural	**LA**					**2**					**2**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Construction Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		the existing A5		prospect of the river and Ballougry Hill would be fragmented, although the hills would remain the primary focus. Hedgerow reinstatement with a high proportion of hedgerow tree planting would be in character with the agricultural landscape and serve as a partial screen to traffic movement.													
V1-11	**1**	Isolated properties along Ballougry Road to the west of the River Foyle.	Open prospects to the east across the Foyle Valley.	The mainline would be evident along the river edge as a new feature within the landscape, although as planting matures this would not represent a significant change to the context of view at this distance.	**SA**			**7**						**1**	**6**			
V1-12	**1**	Isolated properties along Ballougry Road to the west of the River Foyle.	Open prospects to the east across the Foyle Valley.	The mainline and proposed junction area (J2) would be evident along the river edge as a new feature within the landscape, although as planting matures this would not represent a significant change to the context of view at this distance.	**SA**		**1**	**6**						**1**	**6**			
V1-13	**1**	Cluster of properties to the west of the Foyle	Slightly elevated views across the river towards Maghermason and awareness of the existing A5, hills beyond rise to form horizon.	The Proposed Scheme would run alongside the river edge north of Magheramason, varying between cutting and shallow embankment before being obscured by the landform of Meenagh Hill. The Scheme would be slightly more prominent as a result, although the overall context of views across the Foyle would not be disrupted. Hedgerow and embankment planting would effectively screen traffic flow over time.	**SA**		**7**	**6**						**13**				
V1-14	**1**	Cluster of properties to the west of the Foyle	Slightly elevated views across the river towards Maghermason and awareness of the existing A5, hills beyond rise to form horizon.	Same comments as per V1-13	**SA**		**17**	**9**						**25**	**1**			
V1-15	**1**	Properties fronting the A5 north of Magheramason	Views across the immediate A5 corridor towards the Foyle.	The route would be visible briefly where it emerges from cutting to the north of Magheramason, although earth bunding would remove views of much of the traffic. As planting matures, traffic flow would be additionally screened by vegetation.	**MA**	**8**						**8**						
V1-16	**1**	Recent housing estate and older fringe properties to the west of the existing A5 (Magheramason)	Residential properties with views across local farmland, some interrupted by adjacent properties.	The Proposed Scheme would pass in proximity to the western residential edge of Magheramason, the road itself being screened by cutting and screen bund provision. Traffic movement would be evident, becoming screened over time by linear belts of planting along earthwork embankments. Several properties would be impacted upon by the construction of a local accommodation overbridge, which would remain evident within views although softened as embankment planting matures.	**LA**			**15**	**34**	**4**			**15**	**33**	**5**			
V1-17	**1**	Dwellings on Clappernow Road	Slightly elevated properties overlooking the existing A5 and river beyond leading onto distant hills.	The Proposed Scheme would pass in proximity to the western residential edge of Magheramason, the road itself screened by cutting and screen bund provision. Traffic movement would be evident, becoming screened over time by linear belts of planting along earthwork embankments	**MA**				**2**						**2**			
V1-18	**1**	Properties on northern edge of Magheramason	Adjacent to the A5 receptors have interrupted views to the rear to the edge of the village, farmland and river beyond.	Same comments as per V1-17	**MA**	**1**			**3**			**1**			**3**			
V1-19	**1**	Properties on edge of Maghermason on Dunnalong Road	Rear elevations with views of an adjacent low hill form and some awareness along Dunnalong Road from side elevations	The Proposed Scheme would pass in moderate cutting, such that only high-sided traffic and elevated structures would register in views from properties.	**MA**				**8**	**3**					**8**	**3**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Construction Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				This would partially interrupt the skyline of an otherwise localised prospect, something which would be more evident for the southernmost properties with oblique views of the proposed Dunnalong Road overbridge. Embankment planting would significantly reduce the physical presence of the overbridge along the line of view from properties. Hedgerow planting on the crest line of the cutting would serve as a partial screen to traffic movement.												
V1-20	**1**	2 storey properties on the southern residential fringe of Magheramason.	Open views to the south west.	The mainline would appear as a mid-distant element of views, although it would be mostly screened by cutting. The overbridge for the re-aligned section of Dunnalong Road would be partially visible, its embankments softened over time as planting matures.	**MA**			**16**						**16**			
V1-21	**1**	Northern edge of Blackstone Park estate	Oblique or acute views from mainly upper floors of farmland, A5 and river valley beyond.	The Proposed Scheme would be a minor component of views from properties, predominantly in cutting or partially screened by a combination of screen bunding, planting and the residential townscape of Magheramason. The existing A5 occupies the foreground to views and the subsequent reduction in traffic flow would slightly improve prospects from properties as the Proposed Scheme planting matures.	**N**		**28**					**28**					
V1-22	**1**	Receptors off existing A5	Slightly elevated front elevation views across existing A5, edge of village and some views of farmland to the south with the river valley beyond.	Prospects of the Proposed Scheme would be filtered by the residential townscape of Magheramason, with raised bridges evident as newly built features together with more distant oblique views of the road corridor within the river valley landscape. The maturing of hedgerow and embankment planting would soften the appearance of the road corridor and serve as a partial screen to the bridge structures.	**MA**		**1**		**3**				**1**	**3**			
V1-23	**1**	Isolated properties on Mason Road, east of Magheramason	Slightly elevated views west of the village and across the wider Foyle landscape.	The road would appear as a distant element of wide reaching views, such that when planting matures there would be no marked effect on views from these properties.	**N**			**4**					**4**				
V1-24	**1**	Receptors immediately adjacent to the existing A5	Front/rear elevation views across existing A5, edge of village and some views of farmland to the south, river valley beyond.	The Proposed Scheme would run in shallow cutting and at grade, passing across the line of view from the properties at a distance of approximately 200-250m. The proposed Dunnalong Road overbridge would be an evident feature at the point of construction. The road would be discernable in what is predominantly a broad, expansive view across the Foyle landscape. The context of the view would be influenced, although the scale of the view not unduly compromised. Vegetation establishment over time would help integrate the road within the foreground landscape.	**LA**					**3**				**3**			
V1-25	**1**	Receptors along Keery Road and Park	Slightly elevated views across Magheramason, the existing A5, farmland to the south and the river valley beyond.	The properties would experience a slightly more elevated, yet more distant prospect of the road corridor (approx 700m) as described in V1-24. The emphasis of view is more panoramic by nature. The river and distant hills would remain the primary focus although the road would appear as a discernible though intermittent feature within the valley farmland below. Vegetation establishment would integrate the road into the valley landscape as an additional linear form.	**MA**			**3**	**4**					**7**			
V1-26	**1**	Receptors along	Mainly rear elevation views of farmland,	The Proposed Scheme would pass in cutting within approx170-220m of	**MA**				**4**					**4**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Dunnalong Road	existing A5 and immediately rising landform beyond	the properties, the views from which would be interrupted by the higher eastern cutting of the route alignment and the tops of high-sided traffic. The proposed overbridge for Meenagh Road would be evident to oblique views from the properties. The overall nature of views would not unduly change, although the foreground context would be somewhat interrupted. Hedgerow planting would largely screen traffic flows by the Design Year.													
V1-27	**1**	Receptors along Dunnalong Road	Mainly rear elevation views of farmland, existing A5 and immediately rising landform beyond	Comments generally as per V1-26. Receptors are located further away from the route alignment (350-600m) although the Proposed Scheme south of Meenagh Road runs largely at grade and hence traffic flow would more exposed and continuous in the initial years following construction.	**MA**			**1**	**6**				**1**	**6**			
V1-28	**1**	Receptors along Keery Road	Slightly elevated views across existing A5 and beyond is farmland and the river valley beyond.	Comments generally as per V1-25, although the nature of change specific to these properties is less pronounced (the Proposed Scheme runs in cutting where views are direct, and bridge structures are less prominent).	**SA**			**9**					**9**				
V1-29	**1**	Properties facing the A5 corridor, south of Magheramason.	Views across the immediate context of the A5 towards the Foyle.	The road would be largely screened in cutting in the region of these properties, although it would appear as an element of oblique views to the north and south. Those with immediate prospects of the existing A5 corridor would benefit from reduced traffic flow fronting the properties.	**MA**	**5**			**1**			**5**		**1**			
V1-30	**1**	Scattered receptors along the existing A5 Victoria Road	Slightly elevated views to the west across open farmland, awareness of the A5 from some and middle distance views of the river.	The Proposed Scheme would run largely at grade, passing across the line of view from scattered and more elevated properties at a distance of approximately 200-600m. Accommodation overbridges would be an evident feature at the point of construction, particularly for the southernmost property in the grouping. The emphasis of view is panoramic by nature. The river and distant hills would remain the primary focus although the road would appear as a discernible and continuous feature within the valley farmland, in progressively closer proximity to the existing A5. Vegetation establishment would integrate the road into the valley landscape as an additional linear pattern.	**MA**			**1**	**3**	**1**				**4**	**1**		
V1-31	**1**	Isolated properties on Dunnalong Road	Open views east across Foyle Valley	The properties would have open views across the line of the route, as it passes approx 500-600m at grade to the east and starts to rise on embankment towards Bready. As planting matures the road would become more integrated and less intrusive component of the landscape to views from this aspect.	**MA**				**2**					**2**			
V1-32	**1**	Isolated properties on Dunnalong Road	Properties with mainly localised views and prospects east to the crest line of Gormonly Hill.	The uppermost section of cutting through Gortmonly Hill would be visible at distance from these properties, with the majority of the mainline screened by shallow crests in the landform to the immediate east of the properties. Establishment of vegetation along the scheme boundaries and within the cutting would integrate the scheme to views from this distance and aspect over time.	**SA**			**7**					**7**				
V1-33	**1**	Properties along Cloghboy Road	Oblique views of rising farmland, the existing A5 and Gortmonly Hill forming the local horizon.	The creation of an extensive cutting across Gortmonly Hill would register in oblique views from properties. Extensive embankment planting would reduce visual effects over time, particularly along the northern approach to Gortmonly Hill. Integration of	**MA**				**6**				**1**	**5**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				cutting slope profiles and targeted planting would soften the interface of the cutting, while the natural hill form fronting the western cutting would effectively screen all traffic.													
V1-34	**1**	Properties along Cloghboy Road, immediatel west of the A5.	Oblique views of rising farmland, the existing A5 and Gortmonly Hill forming the local horizon.	The creation of an extensive cutting across Gortmonly Hill would be a major element in views from properties. The raised crossing of the existing A5 on embankment would be a prominent aspect of views. Extensive embankment planting would reduce visual effects over time, particularly along the northern approach to Gortmonly Hill. Integration of cutting slope profiles and targeted planting would soften the interface of the cutting, while the natural hill form fronting the western cutting would effectively screen traffic.	**LA**				**2**	**2**					**4**			
V1-35	**1**	Properties and farmstead fronting the A5 at Gortmonly Hill, north of Bready.	Open prospects across the immediate A5 and to the west across the Foyle Valley.	The Proposed Scheme would appear as a new element of the Foyle Valley landscape as it rises on embankment towards Bready. As planting along the embankment matures, the scheme would become more integrated within the landscape setting, with reduced traffic flows interrupted the immediate line of sight from these properties.	**LA**				**3**					**3**			
V1-36	**1**	Cluster of properties on Ballybeeny Road	Elevated prospects across the Foyle Valley, north of Gortmonly Hill.	The road would be a distant feature of wide reaching views across the valley from these properties, which as planting matures would not have a marked effect on the overall quality and aspect of view.	**MA**			**2**	**1**				**3**				
V1-37	**1**	Small cluster of properties immediately adjacent to the existing A5	Main orientation to the west, some awareness of steeply rising hill form to the east.	The Proposed Scheme would pass in close proximity to the properties (approx 40-80m) at its crossing of the existing A5 and entrance into cutting at Gortmonly Hill. The main views from these properties are orientated westwards. To the east, the steeply rising ground would serve as a physical screen to the majority of the cutting; the overbridge construction across the existing A5 and its associate embankment works would be acutely peripheral to the main lines of view. Extensive planting to embankments and to the upper cutting slopes would serve to soften any visible interface of the cutting.	**LA**	**1**		**2**	**1**			**1**	**2**	**1**			
V1-38	**1**	Cluster of properties along Dunnalong Road	Set on slight rise in the landform views include open farmland, the edge of Bready and distinctive outline of Gortmonly Hill to the east.	The Proposed Scheme passes across the edge of Gortmonly Hill in deep cutting. While the extent of cutting would be visible to these properties, traffic movement would be largely screened here and the outline profile of the hill itself would not change from this prospect. Integration of cutting slope profiles and targeted planting would soften the interface of the cutting over time.	**MA**			**6**					**6**				
V1-39	**1**	Receptors on the edge of Bready immediately adjacent to the existing A5	Rear views of steeply rising hill slopes and the edge of woodland to the south.	Comments as per V1-37 (the Proposed Scheme in this instance passing within approx 150m of the properties). Shrub/woodland planting, aimed at compensating for woodland loss would in combination with hedgerow planting serve to soften the visible interface of the cutting at its southern exit	**LA**				**4**					**3**	**1**		
V1-40	**1**	Small estate of dwellings and farm within Bready to	Varying views, interrupted by adjacent properties with views of the existing A5, the	Prospects to the east from these properties become more widespread with elevation, so that the easternmost of the group would be more	**LA**			**1**	**46**	**8**			**42**	**13**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Construction Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		the east of the existing A5	edge of Bready and the distinctive hill form to the east.	exposed to the extensive cutting slope across Gortmonly Hill and the southern exit from cutting at grade. Traffic movement would be largely screened from directly above Bready, but would be visible to the south. The combination of the initial extent of earthworks and the overall perception of the Proposed Scheme in the immediate landscape context would be evident at Year of Opening. The Scheme would integrate over time as planting matures; the extensive cutting slope at Gortmonly Hill would remain evident although the hill crest profile from this line of view would not be interrupted.												
V1-41	**1**	Receptors immediately adjacent to the existing A5	Rear views of steeply rising hill slopes of Gortmonly Hill and the edge of woodland.	Comments as per V1-37 (the Proposed Scheme in this instance passing within approx 150m of the properties). Shrub/woodland planting, aimed at compensating for woodland loss would in combination with hedgerow planting serve to soften the visible interface of the cutting at its southern exit	**MA**			**13**				**9**	**4**				
V1-42	**1**	Receptors adjacent to the existing A5	Slightly elevated propoerties with localised rear views of the steeply rising hill slope of Gortmonly Hill and the edge of woodland.	The Proposed Scheme would emerge from deep cutting directly to the rear of these (mostly single storey) properties, briefly on steep embankment and above the main line of view. Loss of existing woodland would be evident on the nearby hill slope. Environmental barriers would provide an initial screening measure at Year of Opening. Embankment planting would form an effective screen by the Design Year and efforts to ensure as much woodland retention as possible in the creation of the cutting would limit the visual impact that the loss would otherwise have. Shrub/woodland planting, aimed at compensating for any woodland loss would serve to soften the interface of the cutting at its southern exit	**VLA**		**3**			**7**		**3**		**7**			
V1-43	**1**	Settlements along Donaghedy Road	Slightly elevated views of open farmland and local road dominated by hill slopes to the north that form the edge of Gortmonly Hill.	Properties would have direct and localised views across the Proposed Scheme and the re-alignment of Doogary Road via an overbridge. The Scheme would occupy the foreground context of views, slightly below the direct line of view from these properties. The nature of change would be significant. Hedgerow planting with a high proportion of trees, together with sensitive ground modelling of deposition materials would help integrate the Proposed Scheme in the immediate setting particularly in respect of the overbridge, although the road would remain a prominent aspect of views in the Design Year.	**VLA**						**1**			**1**		
V1-44	**1**	Settlements along Donaghedy Road	Views directly east towards Gortmonly Hill.	The property would have direct and localised views across the Proposed Scheme and the re-alignment of Doogary Road via an overbridge. The Scheme would occupy the foreground context of views, slightly above the direct line of view from these properties. The nature of change would be significant. Hedgerow planting with dense tree planting, together with sensitive ground modelling of deposition materials would help integrate the Proposed Scheme in the immediate setting and particularly in respect of	**LA**					**2**					**2**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				the overbridge, although the road would remain a prominent aspect of views in the Design Year.													
V1-45	**1**	Scattered receptors along the existing A5	Wide reaching views with the existing A5 in the immediate foreground and the rise of Gortmonly Hill to the north. Filtered by mature garden vegetation.	The Proposed Scheme would cross the line of view from these properties, generally at grade and at a distance of 280m. The road would be perceived as a distinct component of wide reaching views but would not unduly detract from them. The low level and filtered views, currently with the existing A5 in the immediate foreground would moderate the nature of change experienced. Hedgerow planting along the Scheme corridor would help integrate the scheme in the immediate rural landscape over time.	**MA**			**3**					**3**				
V1-46	**1**	Farmstead off Donaghedy Road	Slightly elevated position with wide reaching views of open undulating farmland, existing A5 and scattered settlements, river and low hills beyond.	The Proposed Scheme would be an evident and largely continuous feature of widespread views, but at moderate distance (0.5-1km). The mainline carriageway alignment varies between embankment and shallow cutting, with limited planting in what is generally an open rural farmland. However the establishment of boundary hedgerows would tie the Scheme corridor into the landscape pattern over time.	**MA**				**2**					**2**			
V1-47	**1**	Scattered receptors along the existing A5	Views dominated by the existing A5 in the immediate vicinity and associated mature vegetation.	The road would pass generally at grade within 200m of the properties, some of which would have direct but filtered views by virtue of mature planting. The nature of change would vary by property, although those to the east of the existing A5 would be more directly affected. Targeted planting of screen bunds and hedgerows would reduce the effects of the Scheme by the Design Year.	**LA**			**4**	**1**				**4**	**1**			
V1-48	**1**	Scattered receptors along the existing A5	Rear elevation views of gently rising landform and farmstead beyond.	The Proposed Scheme would pass in close proximity (approx 60-100m), at grade and slightly above the line of view from the rear of these properties. There would be loss of some mature tree canopy, which would be a major component of views from the southernmost properties. Screen bunding would limit the visibility of traffic movement at Year 0, while associated planting and hedgerow creation would, on maturing serve as a further screen measure.	**LA**			**1**	**7**	**4**			**1**	**7**	**4**		
V1-49	**1**	Farmstead off Willow Road	Widespread, slightly elevated views across the existing A5 and open farmland. Foreground context of adjacent properties and mature trees.	The Proposed Scheme would pass in close proximity (approx 50m) in slight cutting and below the main line of sight from properties. The mainline carriageway would be clearly evident within foreground, mid-distant and distant views across the landscape to the south and south-west, looking along the axis of carriageway where it crosses the existing A5 on embankment. It would remain a largely discernable aspect of widespread views, although embankment planting and hedgerow establishment would tie into the landscape framework.	**LA**				**1**	**2**					**3**			
V1-50	**1**	Isolated properties on Donaghedy Road and Alder Road	Open prospects west across the Foyle Valley.	The road would appear as a distant element of the Foyle Valley landscape from this aspect and distance of view, such that at the Design Year there would be no marked effect on the quality of these views.	**SA**			**9**					**9**				
V1-51	**1**	Cluster of receptors on Grangefoyle Road	Side and rear elevation views of farmland and existing A5 beyond wooded shelterbelts. 						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				shallow crest in the landscape beyond which views to the Sperrin Hills would remain visible. The easternmost property would have side elevation views towards Scheme where it would pass on substantial embankment over the existing A5. Embankment planting and hedgerow establishment would serve as a screen to traffic movement over time; the road would be consequently less evident as a continuous feature by the Design Year.												
V1-52	**1**	Cluster of properties at the junction of Ash Avenue and the existing A5.	Views to the west comprise wooded farmland and cluster of properties to the west on Ash Avenue.	The Proposed Scheme would pass approx 130m from the properties, on shallow hill crest and low embankment. The road would potentially be an evident feature in what is a largely localised view of rural farmland, although screening earthworks in proximity to the properties would reduce this perception. Block planting along the eastern margins of the carriageway alignment and hedgerow establishment would create an additional effective screen by the Design Year.	**LA**	**1**			**1**	**2**		**1**			**3**		
V1-53	**1**	Cluster of properties on Ash Avenue	Mainly front elevation views south and east comprising scrubby farmland, hedgerows and gently falling landform.	The Proposed Scheme would pass to the south of the properties, on low embankment at a distance of between 150-300m. The road would be an evident feature in what is a largely localised view of rural farmland. Linear belts of planting along the western margins of the carriageway would provide an effective screen by the Design Year.	**LA**				**4**	**2**				**4**	**2**		
V1-54	**1**	Cluster of receptors immediately adjacent to the existing A5	Rear elevations overlook gardens and farmland beyond, views curtailed by adjacent properties to the south.	The Proposed Scheme would pass within approx 270m of the properties; it would be a clearly evident feature in the mid-distance of rear property views. The nature of change varies between properties, dependant on whether views are single/2 storey and whether filtered by existing vegetation. Linear belts of planting along the eastern side of the mainline carriageway would provide a continuous screen by the Design Year.	**LA**			**1**	**2**	**1**			**1**	**3**			
V1-55	**1**	Cluster of properties adjacent to cricket ground off Drumenny Road	Views to the west overlook cricket pitch and undulating farmland beyond.	The outlook from the cricket ground would be influenced by the Proposed Scheme, which would pass on low embankment within 100m of the ground itself and within 180m of neighbouring properties. Additional belts of planting would provide a continuous screen by the Design Year although the current, predominantly rural outlook would remain largely obscured.	**LA**			**7**	**11**				**5**	**12**	**1**		
V1-56	**1**	Properties to the west of Burn Dennet	Views east long Drumenny Road towards Burn Dennet and cricket pitch, beyond intervening undulating farmland.	Traffic flows along the A5 would be clearly evident across the line of view from these properties, where the Proposed Scheme would pass on embankment at a distance of 350-400m. Embankment planting would screen traffic movement over time and the interface between the scheme and surrounding landscape context would soften. However the embankment form and extent would divorce any existing visual connection with Burn Dennet Village.	**LA**				**1**	**1**				**2**			
V1-57	**1**	Properties on the existing A5 corridor, immediately south of the Burn Dennet.	Views immediately across the A5 and west across the Foyle Valley, filtered by mature garden boundary vegetation.	The road would be a visible feature of the floodplain landscape where it crosses the Burn Dennet on embankment, however the views from these properties are heavily filtered by garden boundary vegetation. Planting along the embankment lengths would provide a further screen by the Design Year.	**MA**			**1**	**2**					**3**

V2 – Burn Dennet to Strabane

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V2-01	**1**	Properties on Loughneas Avenue	Oblique prospects west and south-west towards the Burn Dennet	Views from the properties would briefly view the route alignment as it passes over and south of the Burn Dennet. There would be no marked change to views upon the maturation of planting at the Design Year.	**SA**			**2**					**2**				
V2-02	**1**	Isolated farmstead	Farmstead with relatively enclosed views to the west, awareness of the adjacent river	The Proposed Scheme would pass on embankment through open farmland west of the property at a distance of approx 250m. Although views would be heavily filtered by existing mature trees and vegetation, the embankment and traffic flow would be an evident feature in the mid distance, running across a line of view between Drumenny Road and the Burn Dennet. The bridge structure spanning the Burn Dennet would also be visible. Embankment planting would serve to soften the appearance of the embankment length over time and provide a screen to traffic movement	**LA**				**1**					**1**			
V2-03	**1**	Cluster of receptors on Ballydonaghy Road, west of Cloghcor	Low lying receptors with views to the south of the edge of McKeans Moss and a rising hill slopes to the east.	The Proposed Scheme would pass to the east and south of the properties, mainly on embankment and in exposed side cutting where the scheme runs alongside the existing A5 corridor. The carriageway would be a continuous and mid-distant feature within oblique views across McKeans Moss, although closely linked with the existing A5 corridor. Embankment planting would soften the relationship of the scheme within the local landscape, in character with the well vegetated existing rise in landform that marks the edge of the floodplain.	**LA**				**2**	**1**				**2**	**1**		
V2-04	**1**	Properties adjacent to junction of Ballydonaghy Road and the existing A5	Views to the west and south overlooking the A5 corridor.	Views west from these properties are heavily filtered by vegetation and adjacent properties such that the road would appear as a partial aspect of the view, although in close proximity. Planting establishment would provide a foil to these views by the Design Year.	**LA**	**1**			**3**			**1**		**3**			
V2-05	**1**	Properties at Cloughcor Grove and Ballydonaghy Road	Elevated views to the west and south overlooking open drained farmland and the edge of McKeans Moss.	The Proposed Scheme would pass within 50m of the properties on high embankment. The road would be a major foreground component of views, the carriageway itself on the direct line of view from those properties facing out onto McKeans Moss. The context of views would be severely disrupted. Environmental barriers along the scheme embankments fronting the properties would serve to partially screen traffic movement in the Year of Opening; planting establishment in the longer term would soften the context of view, however the effect on visual amenity at Design Year would remain significant.	**VLA**				**1**	**5**				**1**	**1**	**4**	
V2-06	**1**	Cluster of properties on Cloghcor Road	Elevated views overlooking adjacent farmland, church and existing A5 on local break in slope, views beyond across river valley.	The nature of change brought about by the Proposed Scheme would vary with the nature of property and outlook. Those closest to the existing A5 would benefit from less visible traffic, whereas those more elevated would have a prospect of the Proposed Scheme beyond the existing A5 corridor. Embankment planting would soften the relationship between the existing A5 corridor and Proposed Scheme, such that views in the longer term would not be unduly affected.	**MA**	**2**		**1**	**2**			**2**	**1**	**2**			

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V2-07	**1**	Isolated properties on Moss Road	Low lying receptors with views to the south of the edge of McKeans Moss and a rising hill slopes to the east.	The Proposed Scheme would occupy a very similar context to the existing A5 corridor in respect of views from these properties. The field of view however would increase where the road swings away from the A5 and south of McKeans Moss. Extensive embankment planting would re-establish the vegetated nature of the raised floodplain edge and former river margin, such that the appearance of the road in the local landscape would not markedly differ from existing.	**MA**				**2**						**2**		
V2-08	**1**	Isolated properties on Lowrys Lane, Ballyheather Road and A5 Victoria Road	Slightly elevated positions afford widespread views to the west across the Foyle valley and McKeans Moss.	The Proposed Scheme would be an evident feature of views across the Foyle valley, visible to the south of McKeans Moss where it extends into the floodplain on embankment; likewise where it veers north at Cloghcor. Where the Scheme adjoins the existing A5 it would be in sidelong cut and would not register in the field of view. The foreground of these far reaching views would remain influenced by the existing A5. Embankment planting would screen distant traffic flow and help integrate the road corridor, although as a discernible linear form within the floodplain.	**MA**				**7**						**7**		
V2-09	**1**	Cluster of receptors on Lowertown Road and Leckpatrick Road	Slightly elevated position affords views to the west and north overlooking river valley, McKeans Moss and at the break in slope the existing A5.	Comments as per V2-08, with properties experiencing more distant prospects.	**MA**			**6**	**3**				**3**	**5**	**1**		
V2-10	**1**	Cluster of receptors on Greenlaw Road	Low lying receptors overlooking drained farmland, levees alongside the Glenmornan River and a rising hill form to the east.	The Proposed Scheme would pass within 150m of the properties on high embankment; it would be a visible and largely continuous feature of the river floodplain at this location. Prospects would vary according to the type and location of properties, some being effectively screened while others experiencing more direct views. The northernmost property of the group would have a far reaching prospect northwards, with the overbridge construction across the Glenmornan River a visible constructed feature. Where properties do experience views, the context of the river floodplain would be noticeably interrupted. Extensive embankment planting would serve to screen traffic flow over time and soften the physical presence of the road within the floodplain, although it would remain a discernible interruption within the local landscape.	**LA**			**1**	**2**	**1**				**3**	**1**		
V2-11	**1**	Cluster of receptors to the north of Ballymagorry adjacent to the existing A5	Located along the break in slope to the Foyle floodplain, views to the west overlook floodplain comprising drained farmland and distant hills.	The Proposed Scheme would pass west of the properties, on embankment at a distance in the region of 0.5km. Views across the floodplain would register the elevated carriageway alignment, most directly where it crosses the Glenmornan River and south to Greenlaw Road. Prospects would vary between properties, however the Scheme corridor would be a largely discontinuous and mid-distant feature of the landscape, which would become less evident over time as embankment planting matures.	**MA**		**1**	**5**	**2**				**8**				
V2-12	**1**	Scattered properties along Park Road	Low lying receptors with views to the east across drained farmland towards Ballymagorry.	Comments as per V2-10 would apply. Additionally, the easternmost property would have side elevation views directly to the overbridge crossing of Park Road which would comprise an additional span for flood attenuation. Although embankment	**VLA**				**1**		**1**			**1**		**1**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				planting would soften the appearance of the road at a local scale, the structure would remain clearly evident to views along Park Road.													
V2-13	**1**	Receptors to the western fringe of Ballymagorry	Receptors to the west of the A5 with varying views over adjacent farmland and scattered receptors on Park Road and Greenlaw Road	The Proposed Scheme would pass to the west of Ballymagorry on embankment, at a distance of approx 0.4-0.5km. Effects would be experienced only from those properties with clear views across the floodplain, located on the edge of the residential cluster and along Park Lane. Views across the floodplain would register the elevated carriageway alignment, most directly between Greenlaw Road and Park Road. Prospects would vary between properties, however the Scheme corridor would be a largely discontinuous and mid-distant feature of the landscape, which would become less evident over time as embankment planting matures. The extended overbridge construction over Park Road would remain evident to those properties on Park Road with side elevation or acute views.	**MA**			**9**	**17**	**1**			**17**	**10**			
V2-14	**1**	Elevated receptors within Artigarvan	Mainly upper floor windows with wide reaching views to the west, interrupted by adjacent buildings to overlook farmland and the river valley.	Prospects of the Proposed Scheme from Artigarvin would be distant and viewed in the context of the existing A5 corridor and its associated settlement. Effects of properties would be slight at the point of construction and barely discernible by the Design Year on establishment of planting.	**SA**			**63**					**63**				
V2-15	**1**	Woodend Road and Lawson Park	Slightly elevated overlooking the existing A5 and farmland to the floodplain beyond, heavily curtailed by adjacent properties.	The Proposed Scheme would pass to the west of Ballymagorry on embankment, at a distance of approx 0.7km. Views across the floodplain would register the elevated carriageway alignment, most directly south of Park Road and towards the proposed J3. Prospects would vary between properties; however the Scheme corridor would be a largely mid-distant feature of the landscape, with views filtered by existing roadside vegetation along the existing A5. The alignment would become less evident over time as embankment planting matures.	**MA**			**48**	**3**				**48**	**3**			
V2-16	**1 & 2**	Isolated property off Park Road	Rear elevation and mainly upper floor views to the east and south, curtailed by a local rise of landform.	The Proposed Scheme would pass within 40m of the property, on the crest line of the shallow rise in landform that borders the property. Views would be in direct line with the carriageway at 1st floor level, with side elevation views south towards the merging slip road from the proposed J3. The Scheme would be an abrupt and highly localised intervention to views from the property. The provision of screen fencing along the boundary line to the rear of the property would provide an immediate screen at Year of Opening, while targeted planting of slip road embankments and hedgerow provision would provide a foil to the junction approach by the Design Year.	**VLA**						**1**					**1**	
V2-17	**1 & 2**	Cluster of receptors at the junction of Park Road with Spruce Road	Gentle rise in landform affords views to the south and east across local farmland, partially obscured by vegetation and buildings on Spruce Road	The Proposed Scheme mainline would pass within 350m of the properties, although the associated junction works would be closer at 100-300m. The properties would experience views of the junction roundabout and local access modifications to Spruce Road, where the slip road earthworks would screen the mainline carriageway. Hedgerow and planting establishment would integrate the junction setting by Design Year.	**MA**			**1**	**6**				**1**	**4**	**2**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V2-18	**1 & 2**	Woodend Road	Slightly elevated position overlooking the existing A5 and the open farmland beyond towards Park Road and the broader river valley.	The Proposed Scheme would pass to the west of Woodend Road and the existing A5 at a distance of approx 0.7km, running south and roughly at grade in the floodplain below the line of view from properties. Views north across the floodplain would observe the carriageway as a distant but continuous element within the wider prospect of the Foyle valley. Views towards the proposed J3 would be oblique to acute by nature, although the southernmost properties would be aware of the new roundabout construction on the existing A5. The alignment would become less evident over time as hedgerow and embankment planting matures.	**MA**			**4**					**4**					
V2-19	**1 & 2**	2 storey property overlooking the A5.	Slightly elevated prospects across the A5 and to the Foyle floodplain to the immediate west and south.	The connecting roundabout from the existing A5 to the junction with the Proposed Scheme (J3) would be evident to the immediate foreground of this property. Also the mainline and associated junction connections would be a major aspect of the wider aspect of view. Planting measures would help integrate the dual carriageway and access roads by the Design Year although the nature of view would still be largely affected by the presence of the road within the immediate floodplain west of the existing A5.	**LA**					**1**						**1**	
V2-20	**1 & 2**	Cluster of properties on Spruce Road	Elevated views eastwards across local floodplain towards the existing A5 and rising hill slopes beyond, with Strabane Glen perceptible to the south east.	The Proposed Scheme would pass within 150m of the properties, through a narrow belt of existing farmland between the existing A5 and the rise in landform on which the properties are sited. The Scheme would form a major foreground component of views (below the immediate line of view), accentuated by the elevated and piled slip road construction on the approach to J3. The junction overbridge and roundabouts would be evident in oblique views. Embankment planting and densely planted boundary hedgerows would help to integrate the Scheme corridor, although for these elevated properties the road would remain a significant aspect of their view.	**VLA**			**1**		**3**			**1**			**3**	
V2-21	**1 & 2**	Isolated properties off Woodend Road	Elevated prospects west and north-west across the Foyle Valley	The properties have a locally raised aspect, with wide reaching views across the Foyle Valley. The Proposed Scheme would appear below the direct line of view, with the mainline and proposed junction (J3) appearing as partial foreground elements. The integration of the dual carriageway and junction setting as planting matures would reduce the prominence of the scheme within the floodplain context from these prospects.	**MA**			**1**	**1**					**2**			
V2-22	**1 & 2**	Woodend Road	Cluster of properties adjacent to the existing A5 with views to the west to the open farmland beyond.	The Proposed Scheme would pass to the west of the existing A5 on low embankment, at a distance of approx 130-150m. The nature of change would vary by property, depending on location, outlook and property type; however all of the properties on the western side of the Woodend Road would experience clear prospects of the existing A5, local farmland and the Proposed Scheme mainline carriageway and slip road approaches to J3 as a foreground element of wider views. The junction overbridge would be evident within oblique views, in particular from the northernmost properties in the group. Extensive planting of embankments and hedgerow establishment would help tie the Scheme into the immediate landscape framework and screen traffic movement, maintaining the emphasis of the wider	**LA**				**3**	**5**			**1**	**2**	**5**

V3 – Strabane & Lifford

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V3-01	**2**	Woodend Road	Cluster of properties adjacent to the existing A5 with views to the west to the open farmland beyond	The Proposed Scheme would pass to the west of the existing A5 on low embankment, at a distance of approx 130-150m. The nature of change would vary by property, depending on location, outlook and property type; however all of the properties on the western side of the Woodend Road would experience clear prospects of the existing A5, local farmland and the Proposed Scheme mainline carriageway and slip road approaches to J3 as a foreground element of wider views. The junction overbridge would be evident within oblique views, in particular from the northernmost properties in the group. Extensive planting of embankments and hedgerow establishment would help tie the Scheme into the immediate landscape framework and screen traffic movement, maintaining the emphasis of the wider prospects across the Foyle valley from this location.	**LA**			**6**	**3**	**2**			**6**	**3**	**2**		
V3-02	**2**	Properties along Park Road	Views to the east heavily curtailed by vegetation along the line of the Strabane Canal, hill of Knockavoe visible beyond.	The Proposed Scheme would pass to the east of Park Road and the Strabane Canal on embankment, at a distance of approx 130-150m. Properties would have heavily filtered views of the Proposed Scheme corridor through the mature tree canopies running alongside the disused Strabane Canal. Establishment of embankment planting and hedgerows would, by the Design Year have largely screened views of traffic movement, with the context of view barely changed.	**MA**			**4**					**4**				
V3-03	**2**	Properties along Woodend Road and junction with Victoria Road (A5)	Wide reaching, slightly elevated mainly front elevation views to the west, directly overlooking the existing A5 and Foyle valley farmland beyond; linear planting associated with the Strabane Canal is an evident feature.	The Proposed Scheme would cross the line of view from these properties, west of the existing A5 and below the general line of view at a distance of approx 100-150m. It would be an evident feature in the foreground context of views, which are progressively more elevated and far reaching along Woodend Road. The Scheme would sit low within the landscape from this prospect, viewed across an immediate context of the existing A5 corridor. Hedgerow and embankment planting would soften the nature of the Proposed Scheme over time.	**LA**			**7**	**11**	**5**			**12**	**11**			
V3-04	**2**	Properties along the existing A5	Rear elevations are afforded views over farmland, framed by mature tree planting along the course of the disused Strabane Canal.	The Proposed Scheme would cross the line of view from the rear of these properties, on high embankment at a distance of approx 50-120m. It would be a prominent feature, forming the focus of view in most instances. Environmental barrier provision along the top of embankment would provide a partial screen to traffic at Year of Opening, with planting establishment ultimately softening the context of the Proposed Scheme over time and providing a screen to traffic movement, although its physical presence would remain as the main focus of views.	**VLA**					**17**						**17**	
V3-05	**2**	Properties within Glenside and Grangewood	Varying views over adjacent buildings with some appreciation of the existing A5 and beyond that farmland contained by planting associated with the disused Strabane Canal.	Views towards the Proposed Scheme would be heavily filtered by adjacent properties and those bordering the existing A5 corridor.	**MA**			**36**	**2**				**23**	**15**			
V3-06	**2**	Properties within Tulacorr	Varying views over adjacent buildings with some	Properties at higher elevation on Tulacorr Heights have widespread	**SA**			**11**						**11**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Heights	appreciation of the existing A5 and beyond that farmland contained by planting associated with the disused Strabane Canal.	prospects across the Foyle valley to the north; the road corridor would be a distant and interrupted feature well below the line of these far reaching views.													
V3-07	**2**	Properties along Town Park	Slightly elevated views interrupted by intervening vegetation and buildings with views towards the existing A5 and Strabane canal.	Comments as per V3-05	**SA**			**10**					**9**	**1**			
V3-08	**2**	Parkland View, Barnhill Court	Slightly elevated prospects both open and interrupted from 2 storey properties overlooking the existing A5 and scrub woodland.	The Proposed Scheme would form a new foreground element in close proximity to the existing A5 corridor. Outer facing properties on the edge of the Barnhill Court development would experience the most change, with exposed views across the existing A5 and the nearby Proposed Scheme on embankment. Solid belts of embankment planting would provide a measure of screening by the Design Year. Properties on Barnhill Court are slightly more elevated and views are filtered by mature vegetation bordering the existing A5, which is largely screened from view.	**LA**			**1**	**5**	**22**			**6**	**17**	**1**	**4**	
V3-09	**2**	Properties off Park Road	Localised views at grade overlooking scrubby farmland and mature screen planting to the existing A5.	The Proposed Scheme would pass in very close proximity to the properties. Effects would be significant, the road forming the major element of local prospects east towards the existing A5. The provision of a screen fence, in combination with dense hedgerow planting would provide additional mitigation at Opening Year and serve to re-establish an effective screen by Design Year, similar in extent to the existing boundary line of the A5.	**VLA**					**3**					**2**	**1**	
V3-10	**2**	Properties along Derry Road, Hazelwood and Ingleside Drive	Slightly elevated views overlooking adjacent property, urban fringe and existing A5 filtered by roadside vegetation and scrubby woodland beyond.	The Proposed Scheme would run parallel with the existing A5, to the river side of its alignment. As such, the context of the Proposed Scheme in mid-distant views would not markedly differ from existing elevated prospects across Foyle Valley. Establishment of planting would reinforce the existing local character of the A5 corridor and limit the effects of the Scheme on the northern residential setting of Strabane.	**SA**			**55**	**1**				**25**	**31**			
V3-11	**2**	Receptors to the eastern fringe of Lifford	Wide reaching views overlooking the adjacent River Foyle and scrubby farmland, across to the existing A5 and the urban mass of Strabane. The summit of Knockavoe forms a distant horizon.	The existing A5 corridor is a continuous feature of the mid-distant landscape fronting Strabane, forming a noticeable aspect of the town when viewed from Lifford. The Proposed Scheme would accentuate this at Year of Opening, where the raised embankment profiles, new overbridge construction and immature planting would expose the corridor more noticeably to views from Lifford. By the Design Year, establishment of planting would create a visual relationship not dissimilar to the existing context; in that views from distance would pick out a similar, largely vegetated road alignment fronting the town.	**MA**			**44**					**44**				
V3-12	**2**	Strabane Cricket Club and properties on Park Road.	Views west across the existing A5 corridor, interrupted by mature vegetation.	The Proposed Scheme, in running parallel with (and on the river side of) the existing A5 would not change the nature of view by any significant degree; planting measures would in time provide a partial screen to traffic movement. The emphasis of contextual views would remain largely traffic dominated in respect of the existing A5.	**MA**		**6**	**2**					**8**				

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V3-13	**2**	Retail properties on Railway Street and Branch Road	Views to the west, dominated by car parks, existing A5 visible on slightly elevated embankment, edge of Lifford perceptible to the west at the foot of Croaghan Hill.	There would be very little change experienced from the commercial developments fronting Strabane at this location. The Proposed Scheme, in running parallel with (and on the river side of) the existing A5 would not change the nature of view by any significant degree; the exposure of view toward passing traffic would increase by comparison with the existing A5 corridor, although embankment planting would in time provide a partial screen to traffic movement. The emphasis of contextual views would remain largely traffic dominated in respect of the extensive customer parking areas, with some reduction in extent of outlook across the Foyle valley.	**SA**			**12**	**1**					**13**			
V3-14	**2**	Commercial outlets and residential property on Lifford Road	Wide reaching views across the floodplain at the convergence of the Rivers Finn and Mourne, across scrubby fields and riverside trees to the urban edge of Strabane.	The immediate visual context would be influenced by the proximity of the new bridge construction and alignment of the Proposed Scheme on high embankment. The assessed sensitivity of the commercial properties has moderated the predicted effect, which would reduce by the Design Year when planting has established along the embankment lengths. The single storey residential property would be subject to more adverse effect by nature of its sensitivity as a receptor. The Proposed Scheme would be much more evident within immediate lines of view across the river than is the case with the existing A5.	**LA**				**4**	**1**					**2**	**2**	**1**	
V3-15	**2**	Commercial and residential receptors along Branch Road and Main Street.	Views across the adjacent river to the existing A5 and Croaghan Hill beyond.	Comments as per V3-13. Properties fronting the Mourne Riverwould have oblique - acute views of the new overbridge and earth mounding to the immediate south of the river; however this would be viewed in context with the existing A5 river crossing and filtered by riverside tree planting. Planting of bridge abutment earthworks would significantly soften the appearance of the bridge approach by Design Year.	**SA**		**1**	**22**					**19**	**4**			
V3-16	**2**	Properties to the south of the River Mourne	Views enclosed by a combination of adjacent development, the river corridor and the existing A5 to the north west	The Proposed scheme would be visible where it crosses the River Mourne, although this would appear in the context of the existing bridge crossing. Planting establishment would soften the junction approaches to either side of the river by the Design Year.	**SA**			**8**						**8**			
V3-17	**2**	Commercial development south of the River Mourne	Views enclosed by a combination of adjacent development, the river corridor and the existing A5 to the north west	Developments of low sensitivity would not experience any significant sense of change. The Proposed Scheme would run parallel with the A5 on the opposing side of the existing carriageway, so that the context of view would not change in terms of the river crossing.	**SA**			**2**					**2**				
V3-18	**2**	Residential receptors along Carrick Strand	Set slightly below the existing A5, upper floor views overlook the adjacent field, the A5 and the urban edge of Strabane.	The Proposed Scheme would be seen as a continuous feature, running just beyond the line of the existing A5 on high embankment where it would cross the Mourne Rivervia a new overbridge. Vegetation bordering the existing A5 is established and would provide a partial screen at Year of Opening. Traffic movement would be evident at a higher elevation than the existing A5, however existing views already comprise A5 traffic and the context of view would not radically alter. Planting of bridge abutment earthworks would significantly soften the appearance of the bridge approach by Design Year.	**LA**			**7**	**10**					**17**			
V3-19	**2**	Residential receptors	Set slightly below the existing A5, upper floor views	Properties have an elevated outlook across the river setting, with the	**LA**					**9**					**9**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		along Carrick Strand	overlook the A5 and the fields and vegetation beyond towards the Finn River.	A5 providing an immediate context partially filtered by garden and roadside vegetation. The Proposed Scheme would pass within 150m of the properties on high embankment and would be a continuous and visible feature of upper storey views. Embankment planting would provide an additional screen by the Design Year although the physical nature of the scheme would remain evident.													
V3-20	**2**	Residential properties along Carrick Strand, Cedar Park and Urney Road	Set adjacent to the existing A5, upper floor views overlook the adjacent field, road and the fields and vegetation beyond leading onto the edge of Strabane	Same comments as per V3-19, although views from properties are less direct and more heavily filtered by garden/roadside vegetation.	**MA**			**2**	**17**					**18**	**1**		
V3-21	**2**	Properties along Urney Road and Finn View	Views to the north and east overlook water meadows, mature waterside vegetation towards the edge of Lifford and Croaghan Hill beyond.	The Proposed Scheme would pass in close proximity to the properties on low embankment, effectively screening off any current visual relationship with the nearby Finn River. Those with direct or exposed frontages to the river would be subject to significant adverse effects. Those at the easternmost extent of the group would have existing far reaching views across open farmland interrupted by the approach of the Proposed Scheme as at descends on embankment from the Mourne crossing. Extensive planting of embankments and the provision of an environmental screen barrier would provide some measure of screening to traffic movement at Year of Opening, which would soften in nature as the planting establishes and matures. The physical presence of the road would however remain evident and a primary focus of view.	**VLA**					**24**						**24**	
V3-22	**2**	Properties to the south of Urney Road	Views overlook Urney Road and housing beyond, with interrupted views of farmland and Croaghan Hill beyond.	The Proposed Scheme, in passing along the river margin would be largely screened by residential development on the north side of Urney Road. Views would be limited to glimpses of traffic movement between properties, more noticeable where there are significant gaps between houses. Vegetation establishment along the line of the Proposed Scheme would filter traffic movement further by design year.	**MA**			**20**	**13**				**12**	**21**			
V3-23	**2**	Glenn Finn Park	Small estate with views to the fringe overlooking water meadows, mature waterside vegetation towards the edge of Lifford and Croaghan Hill beyond.	The Proposed Scheme would pass in close proximity (approx 25m) and in direct line of view across properties at Glenn Finn Park. The existing visual relationship of the outermost properties with the Finn River would be severed and the road would become the dominant focus of views from the rear/side elevations of these properties. The provision of an environmental screen barrier fence to the top of the road embankment would provide a means of partial screening to traffic movement at Year of Opening. By the Design Year, the establishment of planting would serve as an additional screen to traffic movement, although the road would remain a significant aspect of views from properties.	**VLA**				**10**	**2**	**9**				**10**	**11**	
V3-24	**2**	Isolated properties along Urney Road at junction with Carrick Avenue	Views generally orientated north west and overlooks Finn valley, some views obscured by vegetation, Croaghan Hill forms horizon beyond.	The Proposed Scheme and its connecting roundabout with the Proposed N7 Link from RoI would be sited in close proximity to these properties, the roundabout being highly evident on a raised embankment above the local floodplain of the Finn River. The Proposed Scheme would then pass south in deep cutting, this physical	**VLA**					**3**	**1**					**4**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				intervention of landform impacting on a single property in the group. Hedgerow and embankment planting would soften the relationship of the roundabout setting with the river edge, although the visual context of the river from these properties would remain severed and the roundabout a major foreground aspect.													
V3-25	**2**	Residential properties along Summerhill Court and Castlemurray	Views to the west overlooking undulating farmland towards Urney Road and woodland associated with Carricklee Road	The outermost properties would have rear/side elevation views across an open field towards the Proposed Scheme and connecting roundabout with the Proposed N7 Link from RoI, situated below the direct line of view at a distance of approx 250m. The context of the river would be influenced by the new road construction. The Proposed Scheme would then pass south in deep cutting, although the physical intervention would not impact on these properties other than perhaps some visibility of the uppermost reaches of the opposing cutting slope. Hedgerow and embankment planting would soften the relationship of the roundabout setting with the river edge.	**MA**			**9**	**7**				**9**	**7**			
V3-26	**2**	Castlemurray and Castletown Road	Views to the west overlooking undulating farmland towards Urney Road and woodland associated with Carricklee Road	The Proposed Scheme would pass in deep cutting to the west of the properties, such that it would not unduly impact on these properties other than perhaps some visibility of the uppermost reaches of the opposing cutting slope. The connecting roundabout junction with the Proposed N7 Link from RoI would be evident in oblique views towards the Finn River from these slightly more elevated properties. Hedgerow and embankment planting would soften the relationship of the roundabout setting with the river edge and significantly reduce its influence within views from this location.	**MA**				**12**					**12**			
V3-27	**2**	Residential receptors to the west of the confluence of the Rivers Mourne and Finn	Where they occur views to the east overlook the Finn and the western edge of Strabane as it rises to the east.	The properties are largely screened from the Proposed Scheme by a low rise in landform adjacent to the Finn River, such that effects both in the immediate and longer term would be negligible.	**SA**		**15**	**1**					**16**				
V3-28	**2**	Residential properties on Beechwood Grove	Slightly elevated views across the Finn valley and toward the residential edge of Strabane with hills rising to the south and east.	The Proposed Scheme would be most evident from the river crossing where the route alignment runs south in deep cutting. The notch line created in the hill form would be perceived from properties north of the Finn, although in context with a wide field of view. The line of the Proposed Scheme along the edge of the Finn would be largely screened by landform local to the river setting.	**MA**			**116**					**98**	**18**			
V3-29	**2**	Residential properties west of Lifford	Elevated views east across the Finn valley.	Comments as per V3-28, although views would be at greater distance and less influenced by the route alignment.	**SA**			**8**					**8**				
V3-30	**2**	Residential properties west of Lifford	Elevated views east across the Foyle valley.	Views would take in the context of the road at distance, set against the urban context of Strabane. By the Design Year, the establishment of planting would fully integrate the road to views from these properties.	**SA**		**106**	**18**					**124**				
		NCN 92	Line of crossing between Lifford and Strabane, across the River Foyle	The road would be evident at the new crossing point across the River Mourne, along with the approach road embankments to either side. However this would not fundamentally change the existing context of view, such that when planting matures by the Design Year there would be no marked change from existing views.	**MA**			*****						*****

V4 – Strabane to Sion Mills

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V4-01	**2**	Isolated properties along Strahans Road	Open views of open undulating farmland interrupted by hedgerows with the edge of Strabane and hill forms visible to the far east.	The Proposed Scheme would pass in close proximity to these properties, in deep cutting. Immediate prospects would be of a new overbridge construction along Strahans Road, with views partially into cutting. Hedgerow planting would soften the interface between road and landscape over time, although the Scheme would remain a foreground component of local views to those properties closest to the alignment.	**LA**					**3**						**3**	
V4-02	**2**	Isolated properties along Strahans Road and Knockroe Road	Open views of open undulating farmland interrupted by hedgerows with the edge of Strabane and hill forms visible to the far east.	The Proposed Scheme would pass in proximity to these properties, in deep cutting. Immediate prospects would be of a new overbridge construction along Strahans Road, with views partially into cutting. Hedgerow planting would soften the interface between road and landscape over time.	**MA**			**2**	**2**				**2**	**2**			
V4-03	**2**	Industrial premises between Strahans Road and Orchard Road	Local prospects across quarry land and semi-industrial land to the south-west of Strabane	There would be no effect on the context of views from these premises.	**SA**		**2**						**2**				
V4-04	**2**	Estate of Orchard Road	Views to the west overlook industrial estate and fragmented farmland gradually rising towards Knockroe Road.	The Proposed Scheme would be visible as a mid-distant element of the landscape where it emerges from cutting at a distance of approx 0.5km. It would be an intermittent and would not significantly alter the nature of view.	**SA**			**12**					**12**				
V4-05	**2**	Properties along Orchard Road	Views to the west and south overlook local road and fragmented farmland gradually rising towards Knockroe Road.	Comments as per V4-04	**SA**			**3**					**2**	**1**			
V4-06	**2**	Isolated property on Knockroe Road	Low lying receptor with views across fragmented farmland and scrubby vegetation to the east and south.	The Proposed Scheme would immediately pass across the rear line of sight from this single storey property, at a distance of approx 60m where it would be the primary focus of view. A dense block of planting alongside the route alignment would form an effective screen by the Design Year	**LA**					**1**						**1**	
V4-07	**2**	Receptors along Orchard Road	Low lying receptor with enclosed views of undulating farmland and local road	The Proposed Scheme would pass in close proximity between the two properties, in deep cutting. Both would be aware of the new overbridge construction for Orchard Road along with some perception of the local cutting in landform. The property to the west of the Proposed Scheme alignment would be aware of traffic to the south as it emerges from cutting. Hedgerow planting along the top of cutting would serve as a partial screen over time.	**LA**					**2**					**1**	**1**	
V4-08	**2**	Isolated properties near Orchard Road	Oblique and restricted views to the east	The properties would perceive the dual carriageway within a limited field of view where it passes to the south west of Strabane, partially in cutting across Orchard Road. The nature of view towards Strabane would not alter significantly, becoming integrated within the urban edge	**SA**			**6**					**6**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				landscape context by the Design Year when planting matures.													
V4-09	**2**	Residential receptors at the junction of Peacock Road and Melmount Road (A5)	Views to the north and west overlooking rolling landform, Orchard and Knockroe Roads.	The properties would have slightly elevated views across the line of the Proposed Scheme, the overbridge and slip roads for J8 at a distance of approx 100m. It would be a significant element of what is at present a largely rural context. Large areas of planting within and around the junction setting would largely screen the mainline over time. However the overbridge construction and raised alignment of the slip road accesses would remain prominent.	**LA**			**1**		**2**				**1**		**2**	
V4-10	**2**	Cluster of receptors on Peacock Road	Views east overlook a local fold in the landscape along Peacock Road towards hill and the edge of Strabane.	The Proposed Scheme passes east of these properties in extensive cutting, at a distance of approx 80m. The elevated prospect from the properties would be aware of the cutting and of traffic movement just as it emerges on the approach to Sion Mills. Establishment of hedgerow planting along the margins of the scheme would limit the effect of the cutting on local views and serve as a partial screen to traffic movement.	**LA**			**2**	**2**	**1**			**2**	**2**	**1**		
V4-11	**2**	Farmstead off Orchard Road	Open views across the agricultural landscape separating Strabane from Sion Mills	The road and proposed junction (J8) would be evident within a wide field of view from the property, although at distance and below the line of view. The establishment of embankment planting at the proposed junction along with hedgerow re-instatement would serve to integrate the road within the local landscape context to this aspect of view.	**MA**				**1**						**1**		
V4-12	**2**	Residential properties on Millhaven and estate of Lismore Park.	Views from the edge of the development overlook low hill and open farmland; some awareness of existing A5 to the north.	The Proposed Scheme would emerge from deep cutting to the west of Sion Mills, at a distance of approx 80m. False cutting would reduce traffic visibility, although large cutting slopes to the south would be an evident aspect of views from the westernmost properties in the grouping, along with the required overbridge construction for Primrose Park. Vegetation establishment would reduce the exposure of the cutting slopes and any visible traffic movement.	**LA**			**19**	**12**	**8**		**9**	**10**	**12**	**8**		
V4-13	**2**	Lismore Park	Interrupted or curtailed views of farmland beyond adjacent housing rising to the west.	The Proposed Scheme carriageway and traffic movement would be largely screened by cutting and adjacent residential development. Cutting slopes and the proposed overbridge along Primrose Park would be evident as backdrop to a mainly residential context.	**MA**			**49**	**1**				**48**	**2**			
V4-14	**2**	Western edge of Lismore Grove, Primrose Park and Rose Vale	Open and direct rear property views overlooking adjoining farmland and the marked rise in landform to Glebe.	The Proposed Scheme would emerge from deep cutting to the west of Sion Mills, at a distance of approx 80m from this residential edge. The creation of false cutting would reduce traffic visibility in the vicinity, although the larger cutting slopes and the required overbridge construction associated with Primrose Park would be conspicuous. Vegetation establishment would reduce the exposure of the cutting slopes and any visible traffic movement.	**LA**				**10**	**10**				**10**	**10**		
V4-15	**2**	Primrose Park, The Beeches, Marshalls Row, Coronation Park and Daisy Park	Interrupted or curtailed views of farmland beyond adjacent housing rising to the west.	Comments as per V4-13	**SA**			**41**					**41**				
V4-16	**2**	Daisy Park, Rose Vale, Meadow Park, Larch Drive, Grove Terrace and	Open and direct views overlooking adjoining farmland and marked rise in landform to the west.	The Proposed Scheme would run in cutting to the west of Sion Mills, at a distance of approx 300m. The nature of the cutting would limit traffic visibility, although the upper slopes would be an evident aspect of	**MA**			**102**	**32**				**102**	**32**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Sycamore Avenue		views, along with the required overbridge constructions for Primrose Park and Bellspark Manor. Hedgerow establishment would further limit any visible traffic movement by the Design Year.													
V4-17	**2**	Primrose Park	Single farmstead at the foot of marked rise in local landform overlooking open farmland and the residential edge of Sion Mills.	The Proposed Scheme would run in cutting to the west of Sion Mills, in close proximity to the property. A combination of cutting and false cutting would screen traffic locally, although the higher cutting slopes would remain visible. The loss of nearby established tree cover along Primrose Road would represent a noticeable change to the nature of view. Vegetation establishment would reduce the exposure of the cutting slopes and any visible traffic movement by the Design Year.	**LA**					**1**					**1**		
V4-18	**2**	Peacock Road, Primrose Park, Sperrin View and School Terrace	Elevated location overlooking the marked fall in landform and tract of farmland between Glebe and Sion Mills, with distant views to the Sperrin Hills.	The Proposed Scheme would pass in extended cutting to the east of Glebe, well below the elevation of the village itself. Traffic movement would be screened from view, other than south of the village where distant views along the line of the route would be experienced from some properties. The overbridge constructions for Primrose Park and Bellspark Manor would be evident features to some properties.	**MA**			**13**	**7**				**11**	**9**			
V4-19	**2**	Cluster of properties along Garden Road	Filtered views north over rising farmland and open views easterly towards Sion Mills and distant hills.	The Proposed Scheme would run in cutting to the west of Sion Mills, at a distance of approx 100-200m. The cutting would limit traffic visibility, although the upper slopes would be clear aspect of views along with the required overbridge construction for Bellspark Manor. The earthworks for the re-alignment of Garden Road would be evident at Year of Opening. Hedgerow and planting establishment would integrate the overbridge earthworks by the Design Year; hedgerow planting would serve as an additional screen to mainline traffic.	**LA**			**3**	**4**					**7**			
V4-20	**2**	Properties on Bellspark Manor	Broad, open and elevated views to north and east across large fields and managed hedges towards Sion Mills and the Sperrin Hills.	The Proposed Scheme would pass in close proximity to the east of these properties, in extended cutting at a lower elevation. Immediate traffic movement would accordingly be screened, but would become visible in more far reaching prospects north and south of the properties. The overbridge construction for Bellspark Manor would be prominent from garden areas and acute views from the properties. Hedgerow establishment would serve as an additional screen to traffic movement by the Design Year.	**LA**				**1**	**2**	**1**			**1**	**2**	**1**	
V4-21	**2**	Seein Road, Seein Park, Parkside Gardens	Interrupted or curtailed views of farmland beyond adjacent housing rising to the west.	The Proposed Scheme would be mostly screened by a shallow rise in landform west of the residential area, with a perception of the upper cutting slopes through Sion Mills to the north west. Views would be interrupted by adjacent properties, such that the nature of change would be very low.	**SA**		**169**	**18**					**187**				
V4-22	**2**	Liskey Road	Open, low lying views across river towards Sion Mills and rising hill slopes to west.	The Proposed Scheme would be intermittently visible as a distant element of oblique wide reaching views to the south of Sion Mills.	**SA**			**10**					**10**				
V4-23	**2**	Property on High Road	Elevated views to north and east across large open fields falling away towards Sion Mills with distant hills beyond.	The Proposed Scheme passes in close proximity to the west of the property, in extended cutting recessed approx 5m below the elevation of the property. Traffic movement adjacent to the property would be	**LA**					**1**						**1**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				screened, although the carriageway and traffic movement would be prominent in views to the north from the front elevation. A linear block of planting adjacent to the Proposed Scheme would provide additional screening by the Design Year.													
V4-24	**2**	Properties on High Road	Views to the north overlook local road and falling farmland towards Sion Mills with distant hills beyond.	Tops of traffic would be evident along the Proposed Scheme where it rises in cutting from Sion Mills, passing west of the properties at a distance of approx 230-450m. Views would be oblique from the front of the properties, picking out the modification of landform and overbridge crossing of Bellspark Manor as a distant element. Vegetation establishment would integrate the overbridge earthworks and hedgerow planting would provide an effective screen along the mainline by Design Year.	**MA**				**10**						**10**		
		Central Sperrins Scenic Driving Route	Stretch of the existing A5 between Victoria Bridge and the Derg River.	The scheme would be very briefly evident at the connecting roundabout to J8 south of Sion Mills. There would be no change to the experience of the driving route, where landfrom mostly blocks any prospects towards the dual carriageway south of Sion Mills.	**MA**			*					*				
		Sperrin Route 6 Cycle Route (& Derg Valley Cycle Trail)	Open views east across the Mourne valley, descending from Glebe to Sion Mills.	The route would pass across the line of the cycle route in moderate cutting, with the cycle route crossing on a slight re-alignment of Bellspark Road. Views from the cycle route would not substantially alter, other than a brief awareness of the dual carriageway at the point of crossing	**MA**			*							*		
		Other receptors	Scattered receptors typically with views of adjacent farmland within the setting of the Mourne valley, increased elevation quickly affords more distant views of the setting.	Most of these properties are at a distance where it is considered the Proposed Scheme would not register as a significant element of the receptor's visual context.	**SA**			**42**					**42**				
				Total No. of Receptors (608)		**-**	**171**	**323**	**82**	**31**	**1**	**9**	**477**	**89**	**24**	**9**	**-**

V5 – Sion Mills to Ardstraw

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V5-01	**2**	Camus Road	Interrupted or curtailed views west across river valley and towards Sion Mills and rising farmland.	The Proposed Scheme would appear as an intermittent and distant prospect to views across the River Mourne, such that the nature of change within the wider landscape would be barely perceived from this distance.	**SA**			**21**					**21**				
V5-02	**2**	Properties on Seein Road	Elevated properties with broad open views south across rolling farmland and filtered, interrupted views north to rising hill slopes.	The Proposed Scheme would pass west of the properties in shallow cutting at a distance of 150m, with Seein Road re-aligned via overbridge in close proximity. Direct views in the immediate context would be screened largely by landform and adjacent farm buildings. Effects would vary by nature of each property location and outlook, although in general the road would register as a feature of views north from upper windows, and to the south where it runs on high embankment towards Concess Road. Views would mid to distant in nature although the road would be an evident aspect of the largely rural landscape. Establishment of planting would integrate the overbridge locally and soften the embanked length of the alignment towards Concess Road.	**LA**			**4**	**1**				**3**	**2**				
V5-03	**2**	Seein Road	Elevated properties with broad open and panoramic views south across rolling farmland and filtered views north across rising hill slopes.	The Proposed Scheme would pass in cutting to the immediate east of these properties before continuing on high embankment south towards Concess Road. Views would be experienced from front elevations, along the line of the mainline carriageway and from elevation, with a significant change to the context of what is currently a panoramic and rural prospect. Directly north of the properties, the re-alignment of Seein Road would be locally evident. Extensive planting along embankment lengths would soften the relationship of the Proposed Scheme within the landscape, although it would remain highly prominent to views from these properties due to the nature of the alignment.	**LA**			**1**	**1**	**2**			**1**	**1**		**2**	
V5-04	**2**	Isolated properties near Seein Bridge	Views west across rising farmland.	The properties would have varying views of the Proposed Scheme as it cuts across higher ground to the west of the Mourne Valley. Where visible and on embankment, the road would be a partial element within the wider context of view, becoming integrated by the Design Year when embankment planting and boundary hedgerow planting has matured.	**MA**			**5**					**5**				
V5-05	**2**	Property off Concess Road	Filtered views north and east across rolling farmland.	The Proposed Scheme would pass in close proximity and on varying embankment height, at the head of the valley that encloses Seein Bridge. The property located above the line of the road would have exposed views where the route alignment rises to cross the line of Concess Road, resulting in a significant change to the nature of view. The Scheme would appear exposed and prominent within views from the property at Year of Opening. Significant planting along embankment lengths and adjacent to the property would soften this visual context, although the nature of view would still be heavily influenced by the route alignment.	**LA**					**1**						**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V5-06	**2**	Properties either side of Concess Road	Elevated positions with open views over rolling farmland to the east and distant hills beyond.	The Proposed Scheme would pass within 300-400m to the east of properties, on continuous but varying embankment depth and at a lower elevation. The route alignment would be a continuous feature of the landscape to views, evident from Concess Road and southwards, although viewed as a mid-distant element of what is a far reaching prospect. The elevated and extensive nature of view would not change markedly, although the road would be a noticeable element. Selective planting of embankments would integrate the Scheme within the local setting, rather than create a linear belt of vegetation within an elevated rural landscape. Some views towards traffic would remain open, although the intermittent nature of view by Design Year would not detract from the wider prospect.	**MA**			**3**	**1**					**3**	**1**		
V5-07	**2**	Isolated properties on Concess Road and Fyfin Road	Elevated views east across varying terrain towards the River Mourne.	The Proposed Scheme would be visible in limited, short sections of embankment and at distance from these properties, such that it's impact on views would not be significant.	**SA**			**4**					**4**				
V5-08	**2**	Property off Fyfin Road	Single farmstead in an elevated location with filtered, broad views south over rolling farmland.	The property would have elevated views across the line of the Proposed Scheme where it crosses Fyfin Road on significant embankment, in close proximity. There would be a marked nature of change experienced, where the road would become a major element of the foreground view from the property. Established garden boundary vegetation would provide some filter to views at Year of Opening. Planting of the visible embankment areas would soften the visual context by the Design Year although the nature of view would remain heavily influenced locally.	**LA**					**1**						**1**	
V5-09	**2**	Properties in Breenvale, Victoria Bridge	Interrupted or filtered views of rolling farmland beyond adjacent housing to the south.	Properties would have varying prospects along the line of Concess Road towards the Proposed Scheme, crossing locally on high embankment at a distance of approx 300m. The nature of landform and cutting would screen the road from wider views locally, the upper extent of cutting slopes being visible towards the line of Urbalreagh Road. Planting of the embankment slopes at the Concess Road crossing would help integrate the Scheme within the local landscape by Design Year, providing a screen to traffic movement.	**LA**			**12**	**14**				**8**	**18**			
V5-10	**2**	Fyfin Road, Breen Park, Victoria Bridge	Interrupted or curtailed views of rolling farmland beyond adjacent housing and field boundary planting to the south west.	Properties located more centrally within Victoria Bridge would have acute views along the line of Concess Road, heavily filtered or obscured by adjacent properties. The nature of change experienced from these properties would be negligible.	**SA**		**22**						**22**				
V5-11	**2**	Properties along Melmount Road, Victoria Bridge.	Interrupted or curtailed views of farmland beyond adjacent housing to the west, with the existing A5 as an immediate foreground.	The Proposed Scheme would run to the west of Victoria Bridge at a distance of approx 0.5km from the existing A5 corridor and adjacent properties. The road corridor would vary between embankment and cutting, such that it would be a distant and intermittent element of prospects from this location. Planting of the embankment lengths and hedgerow establishment would effectively integrate the road corridor within the landscape setting from this distance.	**SA**		**3**	**13**					**16**				
V5-12	**2**	Property on Urbalreagh Road	Single storey property with open views from side and rear across rolling farmland above Victoria Bridge.	The Proposed Scheme would pass directly to the west of this property in deep cutting across the hill slope. Traffic would be screened locally by cutting, although the top of cutting slope would be evident along	**LA**			**1**						**1**			

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				with the overbridge for the re-aligned Stone Road. Traffic would be visible to the west where it crosses Fyfin Road on embankment at a distance of approx 250-300m. The Planting of the embankment slopes at the Concess Road crossing would help integrate the Scheme within the local landscape by Design Year and providing a screen to traffic movement.												
V5-13	**2**	Properties on Liskey Road, east of Victoria Bridge.	Open views south and west across the River Mourne.	The Proposed Scheme would not have any marked effect on the context of views from these properties, where the road would either run in cutting or be predominantly screened by development and vegetation at distance.	**N**		**3**						**3**				
V5-14	**2**	Urbalreagh Road	Open views east across local road and over rolling farmland with distant hills beyond.	The Proposed Scheme would emerge from cutting to the immediate east of these properties, running across the line of view eastwards at a distance of 70-100m. Although set slightly below the elevation of the properties, the Proposed Scheme corridor would be a significant foreground feature of what is currently an open and panoramic view across the Mourne Valley. Hedgerow establishment along the line of the route would help integrate the Scheme within the field framework and provide an additional measure of screening by the Design Year; however the road would remain a conspicuous feature of views from these properties.	**LA**				**1**	**2**				**1**	**2**		
V5-15	**2**	Properties on Stone Road, Clady Hill	Elevated views east across the Mourne Valley and toward the Sperrin Hills	The Proposed Scheme would pass through a wide field of view from these properties, partially obscured by cutting and at distance below the direct line of view. The road would not unduly distract from the nature of panoramic views experienced by these properties.	**SA**			**4**						**4**			
V5-16	**2**	Property off Urbalreagh Road	Single farmstead with filtered views of surrounding farmland and distant hills to the east.	The Proposed Scheme would pass to the west of the property, at a higher elevation on the hill slope at a distance of approx 100m. Set on low embankment, views of the scheme would be filtered by adjacent farm buildings but an otherwise evident feature of the local setting, particularly so from upper storey views. Embankment planting and hedgerow establishment would provide a local screen by the Design Year.	**LA**					**1**					**1**		
V5-17	**2**	Properties adjacent to the A5, south of Victoria Bridge	Views west across rising farmland towards Clady Hill.	The route alignment would pass to the west and above the properties, on the slopes of Clady Hill. The road would be predominantly screened by existing mature vegetation, other than to oblique views where it continues to run south and at grade towards the Derg River. Establishment of hedgerow planting alongside the scheme would serve to effectively integrate the road within the landscape from this aspect of view.	**SA**			**2**					**2**				
V5-18	**2**	Properties on Urbalreagh Road	Elevated location with broad open views across broad the Mourne valley and Sperrin Hills to the east.	Comments as per V5-14, qualified in that the Proposed Scheme is situated at a greater distance from these properties and consequently set lower in the context of far reaching views.	**MA**		**1**	**1**	**3**				**2**	**3**			
V5-19	**2**	Urbalreagh Road	Elevated location with broad open views across broad river valley and distant hills to the east.	Comments as per V5-18	**LA**					**1**					**1**		
V5-20	**2**	Property adjacent to the A5, south of Victoria Bridge	Views west across rising farmland towards Clady Hill.	Comments as per V5-17	**SA**			**1**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Central Sperrins Scenic Driving Route	Stretch of the existing A5 between Victoria Bridge and the Derg River.	There would be brief, interrupted views of the dual carriageway from the existing A5, which would not unduly change the nature of view from the driving route.	**MA**			*						*			
		NCN 92 (& Newtownstewart to Strabane Cycle Trail)	Elevated views west across the Mourne valley along the line of Bunderg Road.	The dual carriageway would be visible as an intermittent feature of the hill views west of the River Mourne, above the context of the existing A5 corridor set at a lower level in the valley landscape. Planting establishment would help integrate the road within the hill landscape by the Design Year.	**SA**			*					*					
		Other receptors		Most of these properties are at a distance where it is considered the Proposed Scheme would not register as a significant element of the receptor's visual context.	**SA / N**		**25**	**12**					**35**	**2**

V6 – Ardstraw to Newtownstewart

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V6-01	**2**	Receptors along Derg Road	Views broadly contained by landform to the north and focused across rolling farmland to the south, interrupted by hedgerow trees.	The majority of properties along Derg Road would have only acute and fragmented views of the Proposed Scheme where it crosses the Derg River, such that there would not be any perceived effect by the Design Year. The Proposed Scheme passes in close proximity to the easternmost property, but would be screened by deep cutting and with wider views south from the property restricted by farm buildings. Earthworks associated with the re-alignment of Derg Road to an overbridge construction would be evident at Year of Opening, although the nature of view would not change markedly. Vegetation establishment would limit effects by the Design Year.	**MA**		**4**	**8**	**1**				**12**	**1**				
V6-02	**2**	Properties along Coolaghy Road, Ardstraw	Elavated views east across the Mourne Valley and toward the Sperrin Hills	The Proposed Scheme would pass through a wide field of view from these properties, partially obscured by cutting and at distance below the direct line of view. The road would not unduly distract from the nature of panoramic views experienced by these properties at the Design Year.	**SA**		**16**	**3**					**19**				
V6-03	**2**	Scattered properties on Deerpark Road and Milltown Road	Low lying receptors with views across surrounding open mixed and rolling farmland.	On crossing the Derg River the Proposed Scheme would pass east of these properties in cutting, at a distance of approx 150-300m. The nature of change would vary according to the property type and location. The properties would have prospects of the river crossing and overbridge, although to either side of the river the Scheme would enter cutting. Views would be focused towards the new bridging point and the context of traffic movement more immediate than the existing A5.	**LA**				**3**					**3**			
V6-04	**2**	Property off Millbrook Road	Views focussed into local river valley through surrounding woodland, contained by surrounding landform.	The property would have direct views of the overbridge construction across the Derg River at a distance of approx 250m, partially filtered by mature garden vegetation. This would represent a significant nature of change to the prospect from the property. Establishment of planting would soften the bridge crossing in the river context over time, although the structure and traffic passing across the river would remain visible across a narrow field of view.	**LA**					**1**					**1**		
V6-05	**2**	Millbrook Road and Deerpark Road	Open views north and west across low lying, rolling farmland with managed hedges, broadly contained by surrounding hills and tree belts.	The Proposed Scheme would pass west of the properties at grade, at a distance of between 100-200m broadly level with the line of view. Effects would vary by property, but views across an open rural farmland would be interrupted continuously across a wide field of view. Hedgerow establishment would tie the road into the field network and provide a partial screen, although the road and traffic movement would remain an evident aspect in the foreground context of views.	**LA**			**1**	**2**	**1**				**1**	**1**	**2**		
V6-06	**2**	Isolated properties along Bunderg Road	Open prospects west across the Strule/Mourne Valley	The Proposed Scheme would be a distant and interrupted feature within a wide field of view from these properties, partially obscured by cutting and at distance. The road would not unduly distract from the nature of panoramic views experienced by these properties at the Design Year.	**SA**		**5**						**5**				

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V6-07	**2**	Cluster of receptors on and off Magheracoltan Road	Generally lower floor, localised, filtered and interrupted views across adjacent farmland to north and south, with Bessy Bell visible to south.	The Proposed Scheme would pass south of these properties at a distance of approx 200m, crossing Magheracoltan Road on embankment. Views of the Proposed Scheme would generally be acute/oblique in this direction, with the route alignment to the west being screened by a local rise in landform. The context of these views towards Bessy Bell would be interrupted by the alignment which, due to its elevation would be an evident aspect of view.	**MA**			**7**	**4**				**7**	**2**	**2**		
V6-08	**2**	Properties off Magheracoltan Road	Open, top storey views across adjacent farmland to the west and south.	Properties have a more elevated prospect than those described in V6-07 and the Proposed Scheme would be viewed more directly and in closer proximity, although with some filtering from existing mature vegetation. Hedgerow establishment would tie the road into the field network and provide a partial screen, although the road and traffic movement would remain an evident aspect in the foreground context of views.	**LA**					**2**						**2**	
V6-09	**2**	Isolated properties on Magheracoltan Road	Open, uninterrupted views to surrounding rolling farmland with Bessy Bell in skyline to south.	The Proposed Scheme would run between the two properties, crossing Magheracolton Road on an extended, high embankment. Prospects from the easternmost property would be abruptly blocked to the front elevation of the single storey dwelling and would represent a significant change in the nature of view. Views from the western property would be slightly more distant and elevated, although again the road would still be a continuous and prominent interruption across a wide field of view. Embankment planting would soften the visual interface between road and property over time, although the physical proximity of the Scheme would remain an imposition.	**LA**					**2**					**1**	**1**	
V6-10	**2**	Property cluster along Milltown Road	Open, uninterrupted views across shallow rolling farmland with managed hedge lines	The Proposed Scheme would pass east of the properties at grade at a distance of between 100-200m, slightly below the line of view. Effects would vary by property, but views across an open rural farmland would be interrupted continuously across a wide field of view. Hedgerow establishment would tie the road into the field network and provide a partial screen, although the road and traffic movement would remain an evident aspect in the foreground context of views.	**LA**				**3**					**2**	**1**		
V6-11	**2**	Magheracoltan Road	Properties contained by local vegetation with filtered views over rolling farmland to the north and west.	Comments as per V6-09 for the easternmost property of the grouping, although farm outbuildings surrounding the property would partially screen the route. Those directly on Magheracoltan Road are much more effectively screened by local vegetation, although they would still experience filtered views of the Proposed Scheme to the north. Embankment planting and hedgerow establishment would help integrate the Proposed Scheme over time, although the elevated nature of the road across Magheracolton Road would remain an evident interruption of view.	**LA**			**1**	**2**					**1**	**2**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V6-12	**2**	Isolated properties on Drumlegagh Road North and Baronscourt Road	Localised views west toward Bessy Bell, contained to the north by woodland and filtered by intervening boundary vegetation.	The Proposed Scheme would pass between 70-300m from these properties, varying between low cutting and embankment. The earthworks and proposed overbridge construction for J10 would be visible to all properties. The nature of change and effect would vary by property location, although all would have views of the junction setting and the Proposed Scheme alignment crossing a wide field of view. The nature of change would be significant to the properties. Screen mounding and planting would provide a screen measure for properties directly north of the junction. Additional planting across the junction setting would soften the junction context by the Design Year, effects on properties being relative to the extent of screen cover predicted.	**LA**					**3**				**2**	**1**		
V6-13	**2**	Isolated property at Wood Hills	Localised views west toward Bessy Bell, contained to the north by woodland and filtered by intervening boundary vegetation.	The Proposed Scheme would pass south of this property, running from low embankment to grade. The earthworks and proposed overbridge construction for J10 would be visible. Screen mounding and planting would provide a screen measure for properties directly north of the junction. Additional planting across the junction setting would soften the junction context by the Design Year, although the road in the vicinity of the property would remain an evident aspect of the view.	**LA**					**1**					**1**		
V6-14	**2**	Isolated properties on Magheracoltan Road and Killydart Road	Elevated views looking eastwards above Wood Hills.	The Proposed Scheme and J10 would be a distant and interrupted feature within a wide field of view from these properties, viewed at a distance of greater than 1km. The road would not unduly distract from the nature of panoramic views experienced by these properties at the Design Year.	**SA**			**7**					**7**				
		Central Sperrins Scenic Driving Route	Stretch of the existing A5 crossing the Derg River.	There would be brief, interrupted views of the dual carriageway from the existing A5, which would not unduly change the nature of view from the driving route.	**SA**			*****						*****			
		NCN 92 (& Newtownstewart to Strabane Cycle Trail)	Elevated views west across the Mourne valley along the line of Bunderg Road.	The dual carriageway would be visible as an intermittent feature of the hill views west of the River Mourne, above the context of the existing A5 corridor set at a lower level in the valley landscape. Planting establishment would help integrate the road within the hill landscape by the Design Year.	**SA**			*****					*****				
		NCN 95 (& Derg Valley Cycle Trail)	Cycle route crossing the Baronscourt Estate and descending to Newtownstewart via Oldcastle Road	The route would have prospects of the road from higher ground, running between J10 and Harry Avery's Castle.	**MA**				*****						*****		
		Other receptors		Most of these properties are at a distance where it is considered the Proposed Scheme would not register as a significant element of the receptor's visual context.				**8**					**8**

V7 – Newtownstewart to Mountjoy

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V7-01	**2**	Scattered receptors along Oldcastle Road	Properties on rising ground with elevated, broad open views afforded to the north across broken fields bordered by scrub.	The Proposed Scheme would pass to the west of the crest line on which Harry Avery's Castle is located, at a distance of approx 0.5-1km and below the elevation of these properties. Contextual views across the rural landscape of Deer Park and Harry Avery's Castle would be interrupted by the Proposed Scheme, which would be a continuous and mid-distant element where views are open. The proposed J10 would be visible as a distant feature. The nature of change would be noticeable, but not significant to these properties. Hedgerow establishment and planting would integrate the route alignment within the landscape from this distance of view by the Design Year.	**MA**			**1**	**2**				**1**	**2**			
V7-02	**2**	Cluster of properties on Oldcastle Road	Elevated location with broad open views afforded to the north across rolling farmland towards broad river valley.	Comments as per 12-03, although these properties are in closer proximity to the Proposed Scheme and with a more direct context of Harry Avery's Castle as a feature of the landscape setting. As such, the Proposed Scheme would be a more evident component of prospects across Harry Avery's Castle and the nature of change would be greater. The cutting created at Oldcastle Road would be a noticeable intervention although traffic movement would be screened from local property views at this point. Planting provision would be limited to hedgerow creation, in context with the elevated and open nature of the farmland. This would provide some measure of screen by the Design Year, although elevated views would still register the carriageway and traffic movement.	**LA**				**1**	**2**				**1**	**2**		
V7-03	**2**	Isolated property on Oldcastle Road and Glen Road	Elevated location on slopes of Bessy Bell with broad open views to the north across Newtownstewart with Sperrins beyond.	Comments as per V7-02	**LA**					**1**						**1**	
V7-04	**2**	Single storey properties on Oldcastle Road	Elevated location with views of Harry Avery's Castle directly to the west; wider views across rolling farmland to the north and east over Newtownstewart, with the Sperrin Hills beyond.	Front elevation views towards Harry Avery's Castle would not be disrupted. Rear property views to the east would register cutting slopes and some degree of traffic movement where the Proposed Scheme passes between embankment and cutting across open farmland above Newtownstewart. Planting provision would be limited to hedgerow creation, in context with the elevated and open nature of the farmland. This would provide a measure of additional screening by the Design Year.	**LA**					**2**					**1**	**1**	
V7-05	**2**	Oldcastle Road, Castle Court and Honeyford Lane	Interrupted or curtailed views beyond adjacent housing and local road to rising farmland to the west and south.	The Proposed Scheme would pass on higher open farmland to the south of this property group. The nature of change and effect would vary by property type and location, although where views are open there would be a perception of the Proposed Scheme, intermittent in nature and comprising upper cutting slopes and tops of traffic. Planting provision would be limited to hedgerow creation, in context with the elevated and open nature of the farmland. This would provide a measure of additional screening by the Design Year.	**MA**			**13**	**5**				**6**	**12**			
V7-06	**2**	Orr Park, Forthill Walk, Forthill Park in	Interrupted or curtailed views beyond adjacent housing and boundary vegetation to rising farmland to the south.	Residential propeties within Newtownstewart would not experience any significant views of the Proposed Scheme, where it passes west and	**SA**		**9**	**53**					**62**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Newtownstewart		south of the town at elevation and screened by both landform and residential development. Awareness of the Scheme would be limited to any modification of the ridge line associated with Harry Avery's Castle due to cutting, or very distant prospects of cutting slope along the route alignment where it passes at elevation. At Design Year the Scheme would not be an evident feature of any residential property view.													
V7-07	**2**	Group of receptors on Dublin Road, Gortgranagh Road and Glen Road	Generally upper floor views through intervening properties and hedges towards rising, open farmland and the summit of Bessy Bell.	The Proposed Scheme would emerge from cutting east of Oldcastle Road, to run on shallow embankment above the line of view from these properties at a distance of 300m before re-entering cutting at Gortgranagh Road. The exposure of traffic movement on the hill slope above these properties would be evident, although a discontinuous feature within the wider prospects out towards Bessy Bell. Earthworks associated with the re-alignment of Gortgranagh Road and Glen Road to a single overbridge would be conspicuous at Year of Opening, although by Design Year largely integrated by the establishment of scrub vegetation and hedgerow.	**LA**				**20**	**1**				**3**	**18**			
V7-08	**2**	Single receptor on Glen Road	Elevated position on the lower slopes of Bessy Bell overlooking Newtownstewart and the wider Strule valley.	The Proposed Scheme would pass in close proximity to the property, below its line of view and across open and elevated farmland above Newtownstewart. The Scheme would run at grade before entering extensive cutting beyond Glen Road. The creation of an overbridge to accommodate the re-alignment of Glen Road and Gortgranagh Road would be a conspicuous foreground aspect of views. Planting and hedgerow establishment would soften the context of the overbridge by the Design Year. The sidelong aspect of the property to the mainline along with its elevated prospect above cutting lengths would further moderate the effects of the Scheme.	**LA**					**1**					**1**		
V7-09	**2**	Harry Avery's Castle	Elevated position above Newtownstewart with expansive views across the Strule valley to the east and the rising slopes of Bessy Bell to the west.	The Castle serves both as a destination for visitors and a landmark feature to the visual context of Newtownstewart. The Proposed Scheme would pass in close proximity to the west of the castle site and the nature of change to views from the castle setting would affect its visual amenity. The route alignment would be below the line of view but would be a prominent feature of prospects south over rural elevated farmland towards Bessy Bell. Hedgerow establishment along the line of the route, in character with the open nature of the immediate surroundings, would integrate the Scheme within the local setting to some extent although it would remain a significant influence on visual amenity. In respect of Harry Avery's Castle as a landmark to Newtownstewart, the Proposed Scheme in the vicinity of Harry Avery's Castle would be screened from view by natural landform. There would be a minor modification of the crest profile to the west of the castle itself, although this would remain largely intact as a result of the local steepening of cutting slope profiles in this vicinity.	**LA**					**1**						**1**	
V7-10	**2**	Isolated property on Castletown Road	Open views west across the flanking slopes and farmland of Bessy Bell above Newtownstewart.	The Proposed Scheme would pass south of the property, on the flanking slope of Bessy Bell and in moderate to deep cutting. The	**LA**				**1**					**1**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				property would however experience views of the dual carriageway to the north where it runs above Newtownstewart, varying between embankment and cutting along oblique line of view. Planting establishment on embankment lengths, along with hedgerow establishment would help integrate the scheme within this elevated setting by the Design Year.													
V7-11	**2**	Gortgranagh Road, Grouse Park Road	Elevated location on the slopes of Bessy Bell, with expansive views across the Strule Valley towards the Sperrin Hills.	The Proposed Scheme would pass at distance (approx 1km) along the lower slopes of Bessy Bell and above Newtownstewart, varying between embankment and cutting. The route alignment would register as an intermittent feature within wide and far reaching prospects across the Strule Valley. The nature of change would not be significant in respect of the context of view, the focus of which would remain panoramic and large in scale.	**MA**			**5**	**4**				**2**	**6**	**1**		
V7-12	**2**	Scattered receptors on the east side of Castletown Road.	Views across the Strule Valley to the Sperrin Hills across undulating, heavily vegetated farmland.	Comments as per V7-11 although the Proposed Scheme would run in much closer proximity (approx 150m). Consequently the Proposed Scheme alignment would be a much more evident feature, running below and across the line of view from properties and conspicuous where it would run on embankment. There would be a large scale change in the nature of what are wide, far reaching views above the Strule Valley and the Sperrin Hills. Screen bunding and planting north of West Road would provide an additional screen measure to nearby properties slightly uphill of the Scheme, on West Road. Targeted scrub planting on cutting slopes along with hedgerow establishment would help integrate the Scheme along the hill slope and make it a more discontinuous feature to views from properties.	**LA**			**1**		**2**			**1**		**2**			
V7-13	**2**	Isolated receptors off Castletown Road	Views to opposite valley sides and Sperrins across undulating, heavily vegetated farmland. Views uphill towards Bessy Bell.	The Proposed Scheme would pass to the south west of the properties, slightly above their line of view on the break of hill slope above the Strule Valley. Views south along the valley slope from front/rear elevations would register the Proposed Scheme, where it emerges onto high embankment near West Road. This would be a conspicuous element of views at Year of Opening, although scrub planting to embankment slopes and hedgerow establishment would reduce its prominence and form a partial screen to traffic movement by the Design Year.	**LA**					**3**				**2**	**1**		
V7-14	**2**	Scattered properties on West Road and between Castletown Road and A5	Views to opposite valley sides and Sperrins across undulating, heavily vegetated farmland. Views uphill towards Bessy Bell.	Properties share a similar elevation and outlook above the Strule Valley to those described in V7-13. The Proposed would pass immediately west of these properties, varying from embankment to heavy cutting (and exposed sidelong cut) along the break in slope above the Strule Valley. The embankment length at West Road and large sidelong cut further south along Beltany Road would be conspicuous elements of respective open views along the valley slope. Targeted planting on cutting and embankment slopes along with hedgerow establishment would help integrate the Scheme along the hill slope and make it a more discontinuous feature to views from properties by the Design Year.	**LA**					**5**				**1**	**4**		
V7-15	**2**	Isolated properties near	Open views west across the Strule Valley towards the hill	The Proposed Scheme would be a distant feature, set on the slopes of	**SA**		**3**	**6**					**9**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
		Carrigans Road, east of the River Strule	slopes of Bessy Bell.	Bessy Bell and within a wide field of view from these properties, varying between cutting and embankment. As planting matures, the road would not unduly distract from the nature of the panoramic views experienced by these properties at the Design Year.													
V7-16	**2**	Tattynure Road	Elevated views across the narrow gap of the Strule Valley and toward Bessy Bell.	The Proposed Scheme would pass along the break in slope on the western side of the Strule Valley, at a distance of just over 0.5km. The route alignment would be evident as a continuous feature above the line of the existing A5, with intermittent visible traffic flow where the Proposed Scheme moves between cutting and embankment. Earthworks associated with the scheme would, at Year of Opening contribute to the Scheme being more widely perceived from across the valley, although by Design Year the establishment of planting and hedgerows would have softened the interface and reduced the Scheme's perception within the valley setting.	**MA**			**3**	**3**				**3**	**3**			
V7-17	**2**	Properties on the east side of Castletown Road.	Views across the Strule Valley to the Sperrin Hills across undulating, heavily vegetated farmland.	The Proposed Scheme alignment would be a locally evident feature, running below across the line of view from properties and conspicuous where it would emerge between cuttings. Targeted scrub planting and hedgerow establishment would help integrate the Proposed Scheme along the hill slope.	**LA**			**1**		**2**			**1**		**2**		
V7-18	**2**	Receptors along Castletown Road	Elevated location on slopes of Bessy Bell, views across the Strule Valley, over small pastoral fields bounded by mature vegetation, to the Sperrin Hills	The Proposed Scheme would run along the western flank of the Strule Valley, below the line of Castletown Road and the properties situated along it. The elevated nature of view from properties would not perceive the route alignment, other than oblique, longer distance prospects along the line of the valley. The nature of view would not change to any degree, with the broad context of the Sperrins remaining the overriding focus.	**SA**		**1**	**6**	**1**				**7**	**1**			
V7-19	**2**	Isolated property between Castletown Road and A5	Single farmstead bounded by mature vegetation, with channelled views over small pastoral fields, across the Strule Valleyand to the Sperrin Hills beyond.	The Proposed Scheme would pass in close proximity to the east of the property, briefly on low embankment and below the angle of view from the rear elevation and garden setting. The Scheme would not obscure the context of views from the property but it would still be evident from the garden areas, due to its proximity. Targeted planting along the low embankment slopes and establishment of hedgerow planting would act as a foil to any traffic movement visible from the property grounds by the Design Year.	**LA**				**1**					**1**			
V7-20	**2**	Properties and hotel along existing A5, within the Strule Valley	Views generally focussed across the river to the east. Predominantly rear property views to the west across rising, undulating and heavily vegetated pastoral farmland.	The Proposed Scheme would pass along the western flank of the Strule Valley, above the line of the existing A5 and the properties situated along it. The nature of the valley profile would limit views of the route alignment from these properties; embankments would however be visible locally and would convey the line of the route along the valley at Year of Opening. Some traffic movement would be evident, but limited in nature due to the steep angle of view. Integration of the Scheme within the valley context would be achieved through planting of side slopes to tie in with existing woodland belts, along with hedgerow establishment to re-connect with severed field	**LA**			**3**	**1**				**3**	**1**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				boundaries.													
V7-21	**2**	Gortnacreagh Road	Elevated location on slopes of Bessy Bell, views over small pastoral fields bounded by mature vegetation, across river valley with the Sperrin Hills beyond.	The Proposed Scheme would be perceived as a mid-distant feature of elevated, open and far reaching views across the Strule Valley towards the Sperrins. It would be intermittent in nature, with short sections visible on embankment and cuttings perceived at Year of Opening. Establishment of hedgerows and planting would integrate the Scheme such that by the Design Year the cuttings would not be perceived and traffic movement largely filtered.	**MA**				**2**					**2**		
V7-22	**2**	Property on Killynure Road	Single farmstead with views over small pastoral fields bounded by mature vegetation, across river valley with Sperrins beyond. Views uphill towards Bessy Bell.	The Proposed Scheme would pass in cutting, in close proximity to the west of this property. Oblique views from the front elevation would register severance of field pattern and loss of vegetation associated with the cutting, with some prospect of traffic movement where the alignment moves south of the property. The re-alignment of Killynure Road via overbridge would be evident at Year of Opening, although hedgerow establishment would reduce effects in this respect by the Design Year.	**LA**					**1**					**1**		
V7-23	**2**	Carrigans Road and Carrigans Park	Top floor views over small fields and mature hedgerows to opposite valley sides, Bessy Bell and wind farm.	The Proposed Scheme would pass along the western side of the Strule Valley, at a distance of approx 0.75-1km from properties on Carrigans Road. The route alignment would be evident as a continuous feature above the line of the existing A5, with intermittent visible traffic flow where the Proposed Scheme moves between cutting and embankment. Earthworks associated with the scheme would, at Year of Opening contribute to the Scheme being more widely perceived from across the valley, although by Design Year the establishment of planting and hedgerows would have softened the interface and reduced the Scheme's perception within the valley setting	**SA**			**2**	**1**					**2**	**1**			
V7-24	**2**	Scattered receptors, Mellon Road and Carrigans Road	Low lying with filtered views towards opposite valley sides and Bessy Bell.	Comments as per V7-23, although the lower aspect from these properties would reduce the nature of change experienced.	**SA**			**8**					**8**				
V7-25	**2**	Properties and hotel along existing A5, within the Strule Valley	Predominantly rear property views to the west across rising, undulating and heavily vegetated pastoral farmland.	Comments as per V7-20	**LA**				**5**					**5**			
V7-26	**2**	Scattered receptors on and off Castletown Road	Elevated location on slopes of Bessy Bell, views over small pastoral fields bounded by mature vegetation, across river valley with Sperrins beyond.	The Proposed Scheme would pass to the east of these properties, emerging from deep cutting to cross Castletown Road on embankment. Effects on properties would vary with property type and location. The westernmost would experience views south towards the Castletown crossing at a distance of 0.5km. Those on the line of the older track east of Castletown Road would be aware of the nearby cutting alignment, the severance of field pattern and the re-aligned Killynure Road via overbridge. The southernmost property of the group would have local views of the alignment briefly at grade between cuttings, with a significant change to nature of view. Hedgerow establishment would re-connect severed hedge lines and embankment planting would soften the crossing point of Castletown Road.	**LA**			**2**	**2**	**1**				**2**	**2**	**1**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V7-27	**2**	Isolated properties east of Castletown Road	Views toward the southern slopes of Bessy Bell,	The Proposed Scheme would pass to the east of these properties, emerging from deep cutting to cross Castletown Road on embankment. Effects on properties would vary with property type and location, restricted by cutting and local undulations in natural landform. Short exposed lengths would be evident, forming distinct but restricted elements of views. Hedgerow establishment would re-connect severed hedge lines and embankment planting would soften the crossing point of Castletown Road.	**LA**				**2**	**1**					**2**	**1**		
V7-28	**2**	Gortnacreagh Road	Broad open views from elevated setting to the east and south across rolling farmland and low hedges.	The Proposed Scheme would be perceived as a distant feature of elevated, open and far reaching views across the Strule Valley towards the Sperrins. It would be intermittent in nature, with short sections visible on embankment and cuttings perceived at Year of Opening. Establishment of hedgerows and planting would integrate the Scheme such that by the Design Year the cuttings would not be perceived and traffic movement largely filtered.	**SA**		**1**	**8**	**1**				**9**	**1**			
V7-29	**2**	Cashty Road	Open views across rolling, open farmland bordered by low, scrubby hedges with distant hills to the north and east.	The Proposed Scheme would pass in proximity to the east of the properties, on shallow embankment before entering into deep cutting towards Dunteige Road. The carriageway and associated traffic movement would be evident to direct and oblique views eastwards from properties, the Scheme forming a largely continuous element of the foreground landscape context. Properties closest to the Scheme alignment would register the severance of field pattern and loss of hedgerow vegetation associated with the cutting, although traffic flow would be screened by landform. Establishment of hedgerows and planting would integrate the Scheme such that by the Design Year the cuttings would not be perceived and the exposed lengths filtered by vegetation.	**LA**				**1**	**4**					**1**	**4**		
		The Ulster Way	Open views towards Deers Leap, descending from Bessy Bell. Views west across the Strule valley from Carrigans Road.	The trail would cross the dual carriageway above the existing A5 corridor, via a heavily modified re-alignment of the local road. The Proposed Scheme would be seen in context with the existing A5, with wider views towards the Sperrins not unduly altered. Views west from Carrigans Road would view the scheme alignment along the line of the Strule valley, which would become more integrated as planting establishes.	**MA**				*****						*****			
		Robbers Table, Gortin (Public Walking Route and PROW)	Distant prospects from Ballynatubbrit Mountain	The scheme would be visible only as a very distant element of wide reaching prospects. There would be no material change to the quality of view from this location	**N**		*****						*****				
		South Sperrins Scenic Driving Route	Views from the existing A5 corridor within the Strule valley and from Castletown Road	The scheme would be perceived from the existing A5 corridor, although the context of view would not markedly change. Similarly, open lines of view from Castletown Road would be above the dual carriagewat, such that it would not be an intrusive aspect of view.	**SA**			*****							*****			
		NCN 92 (& Newtownstewart to	Views west across the Strule valley from Carrigans Road	The scheme would appear intermittently along the line of the Strule Valley through wide fields of view, set above the existing A5 corridor.	**MA**				*****						*****

V8 – Mountjoy to Gillygooley Road

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V8-01	**2**	Isolated properties on Dunteige Road	Views across rolling, open farmland bordered by low, scrubby hedges with distant hills to north and east. Little appreciation of river valley to east.	The Proposed Scheme would pass in cutting at a distance of approx 0.5km. Prospects from properties would be oblique and limited to a perception of distant traffic flow at the entrance and exit points of the cutting, either side of Dunteige Road.	**SA**			**2**					**2**				
V8-02	**2**	Isolated property south of Dunteige Road	Open prospects south east across rolling drumlin farmland bordered by low, scrubby hedges.	The Proposed Scheme would pass in close proximity to the east of the farmstead on shallow and extended embankment, slightly below the line of view of the residence. The Scheme would be a conspicuous feature of the landscape from oblique and slightly elevated views east to south-east. Hedgerow establishment and embankment planting would provide a partial screen by Design Year and integrate the Scheme in the local drumlin farmland.	**LA**					**1**					**1**		
V8-03	**2**	Isolated receptor on Dunteige Road	Single farmstead with localised views north, contained by landform. Bessy Bell in distance.	The property would be screened from the Proposed Scheme by adjacent farm buildings and natural landform, where the Proposed Scheme would pass to the west and in deep cutting. Deposition of materials across the fields to the north of the property would alter the context of view to some degree, although sensitive profiling would ensure that the nature of this change would not be abrupt. There would be some awareness of the overbridge construction for Dunteige Road, although from acute views only. Re-establishment of field pattern and vegetation on re-profiled deposition slopes would mean that by Design Year, the effect on this property would be no more than slight.	**LA**				**1**					**1**			
V8-04	**2**	Castletown Road and Dunteige Road, Mountjoy	Top floor views interrupted by landform and nearby properties to the west across undulating farmland.	The Proposed Scheme would be screened from these properties by landform. Deposition of materials across the fields to the west of the properties would be perceived to some degree, although sensitive profiling would ensure that the nature of this change would not be abrupt. Re-establishment of field pattern and vegetation on re-profiled deposition slopes would mean that by Design Year, there would be no effect on these properties.	**MA**			**12**					**12**				
V8-05	**2**	Lisnagirr Road, Tully Road	Localised views contained to the east by landform and vegetation. Views west across rolling, small scale fields bounded by low hedges and scrub.	The Proposed Scheme would pass in close proximity, to the west of the properties on embankment across Lisnagirr Road. The route alignment would run consistently across the line of view from both storeys and obscure ground floor views. Earth bunding along the eastern margin of the route alignment would provide an additional screen measure, reducing upper storey views of the carriageway and traffic movement at Year of Opening; planting establishment along the length would provide an additional screen measure to views by the Design Year, although nature of view would remain obscured.	**LA**			**2**	**1**	**2**			**1**	**2**		**2**	
V8-06	**2**	Properties along Lisnagirr Road	Low level, filtered views across rolling drumlin farmland bounded by low hedges and scrub.	The Proposed Scheme would pass to the east of these properties on embankment, at a distance of approx 0.5km.	**MA**			**1**	**5**					**6**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				Views in the direction of the route alignment would be restricted by shallow drumlin landform. Where exposed, the route would appear locally on embankment set below a distant horizon line towards the Sperrin Hills. The low lying, enclosing nature of the drumlin farmland would increase awareness where the Scheme becomes visible. Hedgerow and vegetation establishment on embankments would partially screen traffic movement by the Design Year, reducing the effects of the Scheme at a local level.												
V8-07	**2**	Scattered properties on Tully Road and Rash Road	Localised views contained by surrounding landform and woodland.	The Proposed Scheme would pass between these properties in close proximity, running from grade into cutting across the line of a former railway and its associated scrub woodland. Properties would have a localised prospect above the road corridor and would represent a marked change from the existing context of scrub woodland and shallow drumlin farmland. An overbridge construction to accommodate Rash Road would be a visible feature from the northernmost property of the group. The retention of existing scrub woodland would serve as a partial screen at Year of Opening and additional planting would integrate the Scheme within the local pattern of vegetation by the Design Year. However the proximity of the route and its associated overbridge structure at Rash Road would remain a core aspect of the immediate context.	**LA**				**4**					**4**		
V8-08	**2**	Properties along Drumlegagh Road South	Open, front elevation views across shallow drumlin farmland, with the existing A5 evident to the east. Distant prospects of Bessy Bell to the north and the Sperrin Hills to the east.	The properties would have direct views to the proposed J*, which would be located in the immediate field of view and in close proximity. The nature of change would be major in extent; the mainline itself would be partially screened by the flanking slip road embankments, with the overbridge construction and vehicle movement at junction roundabouts prominent. The retention of as much existing woodland as possible, along with targeted planting on slip road embankments and dense hedgerow planting would provide a measure of screen vegetation by the design year, although the junction setting would remain prominent to views.	**VLA**			**1**	**6**	**5**			**1**		**11**		
V8-09	**2**	Farm and dwelling on existing A5	Elevated location above the existing A5 with views predominantly in an easterly direction. Acute views along the line of the existing A5 to the north and south.	The mainline of the Proposed Scheme would be screened from view by virtue of the drumlin landform on which the farm is sited, along with surrounding farm outbuildings. Acute views south towards the proposed J* access from the existing A5 would be experienced, which would represent a minor nature of change, being barely perceived by the Design Year when planting has established on slip road embankments.	**SA**		**1**	**3**					**4**				
V8-10	**2**	Row of properties on existing A5	Mainly oblique views across shallow and well vegetated drumlin farmland between the existing A5 and Drumlegagh, and along the line of the existing A5 to the north and south, with Bessy Bell as a distant setting.	The Proposed Scheme would pass directly west of the properties on embankment, approaching the setting of the proposed J* to the immediate north where it would be flanked by slip road embankments. Properties would have oblique views of the carriageway as it passes to the west and towards the junction setting, slip roads and overbridge construction. Hedgerow establishment and planting to slip road embankments would provide a partial screen by the Design Year and soften the setting of	**LA**			**1**	**4**				**1**	**4**

						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				the junction area.													
V8-11	**2**	Isolated properties off Rash Road	Oblique views from properties across wooded and shallow rolling drumlin farmland to the north west.	The Proposed Scheme would pass approx 300-500m west of the properties, virtually screened from view by landform and woodland cover. Oblique and acute views from properties would register the embanked approach to the overbridge to accommodate Rash Road and the profiling of deposition materials on nearby fields. Establishment of scheme planting measures by the Design Year would make the Proposed Scheme barely perceived.	**MA**			**2**					**2**				
V8-12	**2**	Properties off Mellon Park Drive	Lower floor filtered views to the west into local valley.	The Proposed Scheme would pass between these properties in close proximity, in localise cutting at the point of passing and on low embankment to the north and south. The western property (2 storey) would have fragmented views of the Proposed Scheme alignment to the north and south, broken by belts of existing scrub woodland. The eastern property (single storey) would have localised views to the north, partially screened by mature roadside trees but with the Proposed Scheme a prominent foreground feature. To the south it would have a more open and slightly elevated prospect above the line of the road. Hedgerow and embankment planting establishment would integrate the Scheme within the landscape setting over time, although the road would remain evident to views both north and south from the single storey property.	**LA**				**1**	**1**				**1**	**1**		
V8-13	**2**	Properties off Gillygooley Road and Aghnamoyle Road	Properties situated on local drumlin landform, with open views across well wooded farmland.	The Proposed Scheme would pass to the east of these properties at a distance of approx 0.5km. The elevated nature of the properties would allow views of the route alignment between local blocks of woodland and variations in drumlin landform. Where exposed, the route would be on low embankment and continuous within the respective field of view. Hedgerow establishment would re-instate severed field pattern and integrate the road corridor over time, along with selective planting on embankments to coincide with existing woodland blocks.	**MA**			**2**	**4**				**2**	**4**			
V8-14	**2**	Varied residential properties along existing A5 and Mellon Park Drive; sports facilities to rear of A5, off Gillygooley Road.	Generally interrupted upper floor views west across low lying sports fields and open farmland, filtered by intervening hedgerows, roadside trees and properties.	The Proposed Scheme would pass west of the properties at a distance between 300m and 1km, initially on large embankment at the crossing of Fairy Water, descending to low embankment/grade towards Gillygooley Road. Many properties have obscured or filtered views, such that the Proposed Scheme would be fragmented and viewed at distance, beyond existing development. Where views are more open and wide reaching, particularly those closer to the Scheme alignment then the nature of change would lead to greater effects, the road corridor appearing as a continuous element across a wide angle of view. Hedgerow planting and targeted embankment planting to tie in with existing woodland cover would soften the interface between the	**MA**			**31**	**7**				**31**	**7**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				Scheme and the northern residential fringe of Omagh by the Design Year.													
V8-15	**2**	Property on Gillygooley Road	Low lying, open views in all directions across gently rolling farmland, low managed hedges and woodland blocks, distant hills to the east.	The Proposed Scheme would pass within 100m to the west of the property, varying from shallow embankment to shallow cutting. The diversion of Gillygooley Road across the route alignment via overbridge would re-align the local road to the direct rear of the property. Views to the north would be influenced by the route alignment, which would be visible in the near to mid distance set on low embankment. Planting measures would reduce the extent of exposure of the Scheme by the Design Year. To the rear and side elevations, the re-alignment of Gillygooley Road as it rises to overbridge would represent a significant nature of change to the existing local context. Planting to the rear of the property would reduce the effect locally at Year of Opening, while establishment of embankment vegetation would soften the visual context of the overbridge by the Design Year. The Scheme would however remain an evident aspect of views from around the property.	**LA**					**1**					**1**		
V8-16	**2**	Single storey properties on Gillygooley Road	Low lying, open views across gently rolling farmland, low managed hedges and woodland blocks.	The Proposed Scheme would pass within 200m to the east of the properties, varying from shallow embankment to shallow cutting. Acute views to the north would be influenced by the route alignment, although predominantly screened by existing blocks of woodland cover. To the front elevations, the re-alignment of Gillygooley Road as it rises to an overbridge would represent a noticeable nature of change, most evident in oblique prospects to the south-east. Establishment of embankment vegetation would soften the visual context of the nearby overbridge by the Design Year.	**LA**				**2**						**2**		
V8-17	**2**	Properties along Gillygooley Road	Open views and interrupted, curtailed views over low lying, open drumlin farmland with Bessy Bell visible as a distant prospect to the north.	The Proposed Scheme would veer west of the existing A5 at Fairy Water, passing to the west of the properties at a distance of approx 400m and varying between low embankments and cutting. The properties facing Gillygooley Road have a wide field of view across local urban fringe farmland, of which the new road alignment would be a mid-distant, continuous aspect at Year of Opening. Properties located off Gillygooley Road would be screened to varying degrees by adjacent landform and properties. Vegetation establishment along the line of the road would tie the Scheme in with the local landscape context to mid-distant views by the Design Year.	**MA**			**18**	**6**				**18**	**6**			
		South Sperrins Scenic Driving Route	Open views east across drumlin terrain, towards Mounjoy via Cashty Road.	The road would be viewed intermittently and at distance, other than where Cashty Road would cross the dual carriageway via an overbridge over deep cutting.	**SA**			*****						*****			
		Other receptors		Most of these properties are at a distance where it is considered the Proposed Scheme would not register as a significant element of the receptor's visual context.	**SA**			**3**					**3**

V9 – Gillygooley Road to Doogary

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V9-01	**2**	Farmstead on Mullaghmena Road	Isolated Farmstead set within low lying drumlin farmland; views from dwelling predominantly to the east.	The Proposed Scheme would pass approx 100m west of the property, on shallow embankment but slightly below the property elevation. Views toward the Scheme corridor from the 2 storey dwelling are screened by surrounding farm buildings and mature vegetation, such that views would be limited and fragmented.	**LA**				**1**					**1**			
V9-02	**2**	Scattered properties on Aghnamoyle Road and Botera Road	Slightly elevated locations with filtered views across undulating, wooded farmland.	The Proposed Scheme would pass south, between these properties at a distance of between 100m and 300m, running from low embankment into localised deep cutting across Aghnamoyle Road and Botera Road. The nature of change would vary by property type and location, although views would generally be slightly above the line of the road where it would be visible as a mid-distant continuous feature along the extended embankment lengths to the north and south of Aghnamoyle Road. Views from properties in the vicinity of Aghnamoyle Road would be obscured by landform although the overbridge construction to accommodate the local road would be a noticeable feature.	**LA**				**2**	**1**					**2**	**1**		
V9-03	**2**	Scattered properties off Mullaghmena Road	Low lying properties with views to rolling farmland broadly contained by landform, mature hedgerows and boundary vegetation.	The Proposed Scheme would pass to the west of the properties at a distance of 300-400m, running from low embankment to localised deep cutting across Aghnamoyle Road and Botera Road. The route alignment would be exposed to views intermittently between the locally shallow, rolling drumlin landforms, with the rise of Aghnamoyle Road an effective screen where the route passes in cutting. Planting establishment would tie in the exposed road sections in the local landscape framework, such that the intermittent visibility would be less perceived by the Design Year.	**MA**			**1**	**5**	**1**				**5**	**2**		
V9-04	**2**	Properties on Rosemary Road	Contained local views with drumlin farmland	The properties would perceive the road at distance and in a restricted field of view, such that there would be no marked effect on prospects from these properties at the Design Year.	**SA**		**3**	**1**					**4**				
V9-05	**2**	Properties along Bracken Road	Mainly rear property views over local drumlin landform	The Proposed Scheme would run along a shallow valley form, below the line of view from the property elevations and in close proximity. A block of local woodland within the valley area would be lost to the development. Views from the properties would generally be above the line of the road and not obscured, with the road registering as a foreground component and evident to the north from oblique property views. The loss of woodland locally would increase the nature of change and the effect experienced at Year of Opening. Scrub planting to sidelong cutting and overbridge embankments would soften the interface in time, although the Scheme would remain noticeable in the context of view.	**LA**				**1**	**4**					**1**	**4**		
V9-06	**2**	Isolated single storey property on Tamlaght Road	Localised, contained views within drumlin farmland	The Proposed Scheme would run along a shallow valley form approx 150m to the west of the property. Views from the single storey dwelling would be contained largely by local garden hedges and surrounding tree cover. The overbridge	**MA**				**1**					**1**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				construction to accommodate Tamlaght Road and its associated earthworks would be the main change in context of view at the Year of Opening, along with some sense of nearby woodland loss and exposed sidelong cutting. Scrub planting to sidelong cutting and overbridge embankments would soften the interface in time, such that views by the Design Year would be limited to filtered, intermittent perception of traffic movement.												
V9-07	**2**	Properties on Bracken Close and Brookmount Road	Views west toward drumlin farmland from residential edge of Omagh	Properties on the western residential edge of Omagh along Brookmount Road and Bracken Close would experience intermittent, fragmented views of the Proposed Scheme where it passes through rolling drumlin farmland at a distance of 400m from the properties. Local scrubby vegetation and outgrown hedges would provide an additional filter to views at Year of Opening, while establishment of hedgerow and embankment planting along the line of the route would provide an effective filter to any exposed traffic movement by the Design Year.	**SA**			**21**					**21**				
V9-08	**2**	Isolated properties on Bracken/Brookmount Road	Views across local drumlin farmland	Properties would have varying elevated views, generally with a south-eastward prospect across the line of the Proposed Scheme where it emerges from local cutting to cross Brookmount Road on embankment. The nature of views, despite being close to the A32 Clanaboghan Road are rural in nature, well vegetated and characterised by the shallow domes of drumlin landform. The Proposed Scheme would alter the foreground context with a pronounced initial sense of change at Year of Opening, with exposed embankment and loss of mature hedgerow vegetation. By Design Year, extensive planting establishment would soften the transition from cutting and provide an effective foil to traffic movement.	**LA**				**1**	**2**					**1**	**2**		
V9-09	**2**	Isolated property off A32 Clanaboghan Road	Views across local drumlin farmland and A32.	The property elevation is situated directly towards the proposed J12 with the A32 Clanaboghan Road. Existing views are heavily filtered by mature vegetation, although the passing of the Proposed Scheme on overbridge at a distance of approx 150m would represent a major change to the context of view at Year of Opening. Slip road embankments would appear bare and traffic movement exposed at elevation, however in time the establishment of significant blocks of planting to either side of the A32 would soften the impact of the junction setting locally.	**LA**					**1**					**1**		
V9-10	**2**	Cluster of properties on A32 Clanaboghan	Local views directly across line of A32 corridor.	Views east along the line of the A32 Clanaboghan Road are heavily filtered by mature roadside vegetation and the pattern of local often outgrown hedgerows. The Proposed Scheme would be visible at the point it crosses the A32 at elevation via overbridge, across a narrow field of view and filtered by vegetation. Establishment of new planting would soften the impact of the junction setting locally by the Design Year.	**MA**			**3**					**1**	**2**			
V9-11	**2**	Properties on Lambrook Close and Lambrook Heights	Elevated views west toward drumlin farmland from residential edge of Omagh	Views west along the line of the A32 Clanaboghan Road are heavily filtered by mature roadside vegetation and the pattern of local often outgrown hedgerows. The Proposed Scheme would be visible at the point it crosses the A32	**MA**			**4**	**7**				**4**	**7**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				at elevation via overbridge. Slip road embankments would initially appear bare and traffic movement exposed at elevation, however in time the establishment of significant blocks of planting to either side of the A32 would soften the impact of the junction setting locally.													
V9-12	**2**	Properties on Drummanon Rise and Drummanon View	Views across residential fringe of Omagh towards drumlin farmland	Properties on higher ground would have prospects along the line of the A32 Clanaboghan Road, but heavily fragment by adjacent properties and filtered by mature field margins and roadside planting such that the effect of the proposed J12 crossing would be barely perceived.	**N**		**21**						**21**				
V9-13	**2**	Properties on Dromore Road, Ashbourne Court and Ashbourne Heights	Views across and along the line of A32 corridor, west of Omagh	Views west along the line of the A32 Clanaboghan Road are heavily filtered by mature roadside vegetation and outgrown hedgerows. The Proposed Scheme would be visible to acute views at the point it crosses the A32 at elevation via overbridge, with a minor change to the overall context of view. The establishment of significant blocks of planting to either side of the A32 would soften the impact of the junction setting locally, restricting effects at the Design Year to a perception of the overbridge crossing only.	**SA**		**6**	**10**					**16**				
V9-14	**2**	Row of properties along Loughmuck Road	Localise views within drumlin farmland	Views toward the proposed J12 with the A32 Clanaboghan Road are fully screened by drumlin landform. There would be some perception of change experienced in acute views from properties, along the re-aligned local road westwards to where the Proposed Scheme would briefly emerge on embankment. Planting to the facing embankment slopes would reduce this perception and provide a partial screen to traffic movement by the Design Year.	**SA**		**6**	**12**					**18**				
V9-15	**2**	Isolated properties south of Loughmuck Road	Localised views within drumlin farmland	The Proposed Scheme would pass to the immediate east of the properties, emerging briefly from cutting at a distance of between 75-100m. Views would be locally direct from properties although the exposure of the road would be limited in its extent. Establishment of hedgerow planting would re-connect the severed pattern of field boundaries and provide some level of screening to traffic movement by the Design Year.	**LA**					**2**					**2**		
V9-16	**2**	Cluster of properties on Beagh Road	Localised views within drumlin farmland	The Proposed Scheme would pass to the east of the properties at a slightly lower elevation, largely concealed by drumlin landform from most prospects. Beagh House, along with the more elevated easternmost property in the group both would have open, partially filtered views toward the Proposed Scheme, which would be evident locally on embankment at a distance of approx 250-400m. Earthworks to accommodate the re-alignment of Beagh Road on overbridge would be evident. Establishment of planting to the overbridge earthworks and along the road alignment would provide an additional filter to traffic movement and soften the appearance of the Beagh Road overbridge, however the Scheme would still be a noticeable aspect of these local views in the Design Year.	**MA**			**2**	**1**	**1**				**2**	**2**		
V9-17	**2**	Cluster of properties on Beagh Road	Localised views within drumlin farmland	The Proposed Scheme would pass directly south-west of these properties and both would have immediate views from a slightly elevated prospect.	**LA**				**1**	**1**				**1**		**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				The embankment slopes to accommodate the proposed Beagh Road overbridge would be an immediate obstruction to views from the farmstead. The property to the east would be less impacted upon although would experience oblique views of the earthworks. Views of the Proposed Scheme mainline would be screened partially by local drumlin landform and, in the case of the farmstead, the earthworks to the overbridge. Extensive planting would integrate the overbridge earthworks by the Design Year and provide an additional screen, however the context of view would remain significantly changed from existing.												
V9-18	**2**	Isolated properties on Ballynahatty Road	Localised views within drumlin farmland, oblique in the direction of the Proposed Scheme.	The Proposed Scheme would pass to the south of the properties, varying between deep cutting through pronounced drumlin landforms and on embankment across the Drumragh River. The road alignment would be evident on local embankment only to acute views from the properties and oblique views from garden settings. Earthworks to accommodate the re-alignment of Ballynahatty Road would be evident to the southernmost property of the group, which would also experience a greater sense of change in its oblique views towards the Drumragh River. Establishment of planting to mainline and local road earthworks would effectively integrate the Scheme within the local landscape context by the Design Year.	**MA**			**1**	**1**					**2**				
V9-19	**2**	Isolated property on Ballynahatty Road	Localised views within drumlin farmland, heavily filtered by mature vegetation in the direction of the Drumragh River and the Proposed Scheme	The Proposed Scheme would pass to the east of the property, varying between deep cutting through pronounced drumlin landforms and on embankment across the Drumragh River. The road alignment would be evident on local embankment to oblique views from rear of the property, although heavily filtered by vegetation. Earthworks to accommodate the re-alignment of Ballynahatty Road would be evident immediately to the north. Establishment of planting to mainline and local road earthworks would effectively integrate the Scheme within the local landscape context by the Design Year.	**MA**				**1**					**1**				
V9-20	**2**	Isolated properties on Ballynahatty Road	Localised views within drumlin farmland.	The Proposed Scheme would be limited to acute and restricted views from these properties, where embankment or cutting within the drumlin landform would be evident. With establishment of planting the route alignment would be effectively integrated within the landscape.	**SA**			**2**					**1**	**1**			
V9-21	**2**	Isolated properties on Blackfort Road	Localised views within drumlin farmland with main focus of view eastwards.	The Proposed Scheme would pass to the south of the property, varying between deep cutting through pronounced drumlin landforms and on localised embankment between. The properties would have oblique views of a small section of the route alignment where it passes on embankment between drumlins. For the single storey property facing Blackfort Road this would be closer to the direct line of view and traffic movement more evident. Embankment planting and hedgerow establishment would soften the embankment interface and provide a screen measure to traffic by the Design Year.	**LA**			**1**	**2**					**1**	**2**		
V9-22	**2**	Isolated single storey	Localised view within drumlin farmland with main focus of	The Proposed Scheme would pass to the north of the property, varying	**SA**			**1**						**1**

		property on Blackfort Road	view eastwards.	between deep cutting through pronounced drumlin landforms and on localised embankment between. The property would have oblique views of a small section of the route alignment where it passes on embankment between drumlins. Views however would be heavily filtered by mature garden vegetation and field margins in the line of view. Embankment planting and hedgerow establishment would soften the embankment interface and provide a screen measure to traffic by the Design Year.													
V9-23	**2**	Cluster of 2 storey properties on Drumragh Road	Elevated, localised views across drumlin farmland with main focus of view to the north-east.	The Proposed Scheme would pass to the north-east of the properties, varying between deep cutting through pronounced drumlin landforms and on localised embankment between. The properties would have direct views of a small section of the route alignment where it passes on embankment between drumlins, at a distance of approx 150m. The farm to the south of the group is largely screened by farm outbuildings and views from the property are heavily filtered by vegetation. Embankment planting and hedgerow establishment would soften the embankment interface and provide a screen measure to traffic by the Design Year.	**LA**			**1**	**2**	**1**				**1**	**3**		
V9-24	**2**	Isolated farmstead, 2 storey.	Localised views within drumlin farmland and of the Drumragh River; main axis of view to west and east.	The Proposed Scheme would pass to the south of the property, varying between deep cutting through drumlin landforms and on localised embankment. The farm dwelling would be situated slightly below the carriageway elevation and would experience front elevation views along the line of the route to the east, where the Proposed Scheme would emerge from cutting towards J13 at Doogary. Embankment planting and hedgerow establishment would soften the junction setting and provide a screen measure to traffic by the Design Year.	**LA**					**1**					**1**		
		South Sperrins Scenic Driving Route	Views along the line of the A32 Clanabogan Road.	The split level junction (J12) on the line of the A32 Clanabogan Road would be the only visible aspect of the Proposed Scheme on this section of the scenic drive.	**SA**			*****						*****

V10 – Doogary to Moylagh

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V10-01	**1 & 2**	2 storey properties bordering A5 Doogary Road	Rear property views across local drumlin farmland	The Proposed Scheme would pass to the south of the properties, with link road between the existing A5 and J13 located adjacent. Rear property views would register the route intermittently where it crosses local drumlin farmland, just below the mid-distant horizon line defined by these drumlins (approx 0.5km). Establishment of embankment planting and hedgerows would tie in the scheme with the local landscape pattern and serve as a screen to traffic movement between drumlin crests. The slip road roundabout on the existing A5 would be evident to acute views only from the properties. The farm dwelling (southernmost in the group) would be largely screened by adjacent farm buildings, its direct line of view to the proposed slip road being screened by local drumlin landform.	**MA**			**1**	**3**					**4**			
V10-02	**1**	Properties bordering A5 Doogary Road	Views across the existing A5 towards local drumlin farmland	The properties would view the proposed roundabout construction and slight re-alignment of the existing A5, for access to J13. This would represent a minor nature of change, given that views already have an immediate prospect of the A5 corridor and of traffic movement across the line of view.	**MA**			**3**					**1**	**2**			
V10-03	**1 & 2**	Isolated property on Seskinore Road	Views to local woodland and north across shallow drumlin farmland; main axis of view from property east and west.	The junction arrangement, located to the north of the property would be visible to only highly acute views from front/rear elevations, at a distance of approx 300-400m. Prospects from side windows would be well screened by significant blocks of woodland planting by the Design Year, with the diverted and raised profile of Seskinore Road remaining evident within views. The mainline carriageway would be screened at Year of Opening by the flanking slip road earthworks and any prospects east/west beyond the immediate junctions screened by natural landform and vegetation. Some woodland loss directly opposite the property would represent a minor level of change	**MA.**			**1**						**1**			
V10-04	**1**	Properties bordering A5 Doogary Road	Elevated views south across open drumlin farmland and along the line of A5	The Proposed Scheme would pass within 250m of these properties across Doogary Bog, west of the existing A5 corridor. Views from the properties are elevated, with direct side elevation and oblique front/rear elevation prospects across the bog landscape where the route alignment would veer south on low embankment towards the existing A5. The road would be a visible and continuous feature within the field of view, although the wider context of views would not be interrupted. Embankment planting and hedgerow establishment would tie the Scheme into the local landscape, much in the same way as the existing A5 appears in context from these properties. For some open prospects the route would remain an evident feature within the landscape at the Design Year	**MA**		**1**	**1**	**2**				**2**	**1**	**1**		
V10-05	**1**	Isolated farmstead on A5 Doogary Road	Main front/rear property views to north across the A5 and south across shallow drumlin farmland to scrub woodland and areas of bog. Mature vegetation set around property.	Comments as per 19-10, qualified in that the Proposed Scheme would pass closer to the property (within 80m) and across a wide field of view from the rear elevation, with acute prospects along the line of the route	**LA**					**1**					**1**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				in both directions. Both main elevations would be significantly influenced by road traffic, to the north by the existing A5 and to the south by the Proposed Scheme. Earth mounding and associated planting would provide a measure of screening to the carriageway and traffic movement at its closest approach, although the Scheme would still constitute a significant effect on views in the Design Year.												
V10-06	**1**	Tattykeel Cottages	Recessed location with local views toward immediate hill form.	Rear elevation views from the properties are well screened by adjacent landform. There would be some perception of the proposed re-alignment of the local road via overbridge in acute views, although by Design Year with planting establishment this would constitute no effect.	**SA**			**8**					**8**				
V10-07	**1**	Isolated farmsteads north of A5 Doogary Road	Views across drumlin farmland and A5 road corridor	The Proposed Scheme would run just west of the existing A5 and would be viewed in the same context from the properties. Views would be distant (300-400m) and the nature of change would be minor, with farm buildings restricting views and with little or no perceived effect on properties by the Design Year.	**SA**			**2**					**1**	**1**			
V10-08	**1**	Properties and church along Crevenagh Road	Elevated and far reaching views to west across the A5 corridor and drumlin farmland.	The properties would have distant and very limited prospects of the Proposed Scheme within the wider drumlin landscape, such that the nature of change would be barely perceived.	**SA**		**4**						**4**				
V10-09	**1**	Properties south of Tattykeel Cottages, near junction with Drumconnelly Road	Single and 2 storey properties set within a recessed local landform with localised views of immediate drumlin farmland.	The Proposed Scheme would pass between and adjacent to these properties. The carriageway would be an immediate intrusion across the field of view, becoming the primary focus within a very local visual context. The nature of change experienced would be significant. The retention of as many existing mature trees as possible to the front of the single storey properties would provide a filter to traffic movement at the Year of Opening, along environmental screen barrier provision to the southbound side of the carriageway and extended additional planting belts and targeted planting to the north and south of the properties in order to reduce effects on oblique and side elevation views by the Design Year.	**VLA**						**3**						**3**
V10-10	**1**	Single storey properties on Camowen Road	Views towards nearby A5 corridor	The Proposed Scheme would run just west of the existing A5 and would be viewed in the same context from the properties. Views would be largely screened by existing vegetation and the nature of change experienced would be minor. The re-alignment of Drumconnelly Road would be perceived as a minor element within the field of view, although this would not be evident by the Design Year when scheme planting has fully established.	**SA**			**2**						**2**			
V10-11	**1**	Single and 2 storey properties adjacent to A5 Doogary Road/Drumconnelly Road junction.	Views south across open drumlin farmland, partially screened by garden hedges and boundary trees.	The Proposed Scheme would pass to the immediate west of these properties at a distance of just over 100m, running on low embankment and beneath the overbridge for the re-aligned Drumconnelly Road to the south. Views of the mainline carriageway would differ between properties. The single storey dwelling would have views north-west along the line of the route with the 2 storey property having heavily filtered views of the Scheme as it passes south of Drumconnelly Road. Both properties would view the overbridge construction, which would obscure wider	**LA**					**2**					**2**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				prospects for the 2 storey property yet would also screen wider views south along the route alignment. Planting establishment along the embankments of the re-aligned Drumconnelly Road would soften its influence by the Design Year. Additional planting alongside the Proposed Scheme north of Drumconnelly Road would provide an additional screen for the single storey property.												
V10-12	**1**	Isolated farmstead north of Drumconnelly Road	Widespread views from local drumlin crest, partially obscured by vegetation	The Proposed Scheme would form a component of elevated and far reaching views north from the property, although viewed in the context of the existing A5 corridor and below the direct line of sight. Views south would be screened by farm buildings and mature stands of vegetation. Establishment of planting along the line of the road would locally integrate the Scheme, such that it would be perceived as an element of the southern fringe landscape of Omagh by Design Year.	**MA**				**1**						**1**		
V10-13	**1**	Single storey and 2 storey properties adjacent to A5	Rear/front property views west across drumlin farmland and nearby drumlin crests	The properties would have rear elevation (single storey) and front elevation (2 storey) direct/oblique views across the line of the Proposed Scheme, partially filtered by farm outbuildings and vegetation. The sensitive profiling of deposition materials across adjacent fields would alter the nature of view, but would effectively screen the mainline carriageway from view. The overbridge construction for the re-aligned Drumconnelly Road would be evident in oblique views, however with the profiling of deposition materials there would be no evidence of engineered embankments locally. Hedgerow establishment to the mainline and re-aligned Drumconnelly Road would further integrate the scheme locally by the Design Year.	**LA**			**1**	**1**						**2**		
V10-14	**1**	Cluster of properties (residential and commercial) adjacent to A5	Oblique views to west to local drumlin farmland, interrupted by nearby drumlin crests; some views partially obscured by properties/vegetation	The Proposed Scheme would pass to the west of the properties at a distance of 250m. It would be largely screened by virtue of nearby drumlin landform and vegetation, along with local outbuildings within the cluster of properties. Brief, fragmented views would be experienced as the Scheme alignment emerges from cutting to the south. Effects would reduce with establishment of roadside hedgerows.	**SA**			**4**							**4**		
V10-15	**1**	Cluster of single, 2 and 2.5 storey properties north of Tullyrush Road	Properties set on rising ground with views across local drumlin farmland.	The Proposed Scheme would pass in close proximity to the west of the properties, crossing Tullyrush Road on extended embankment. The more elevated properties in the grouping would experience direct views toward the road, where it would pass on embankment and at grade across the drumlin crest. Properties closer to Tullyrush Road would be set below the Scheme elevation, with a wide field of view of extended embankment and of the overbridge setting. The nature of change would be significant to all properties, with largely rural prospects either interrupted or obscured by the Scheme. Environmental barrier provision would create a partial screen to traffic movement at Year of Opening. Extensive planting of remnant land parcels would in time provide a solid screen to views from the more elevated properties by the Design Year. Embankment planting would serve a similar purpose for those properties next to Tullyrush Road,	**VLA**					**5**						**5**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				although the imposition of the Scheme within the local context of view would remain.													
V10-16	**1**	Single storey properties along Tullyrush Road	Local views, heavily filtered by boundary and roadside vegetation	The Proposed Scheme would only be evident to acute views from the properties, heavily filtered by mature garden boundary vegetation. The potential for vegetation loss along the road boundary to the front of these properties would result in an opening of views, although not directly to the Scheme alignment itself. Re-instatement hedgerow planting would return the nature of the existing prospect by the Design Year.	**MA**			**2**						**2**			
V10-17	**1**	Isolated farmstead north of Tullyrush Road	Channeled views across local drumlin farmland, partially enclosed by vegetation	The Proposed Scheme would be in direct view from the front elevation of the farm dwelling where it would bridge across Tullyrush Road on extended embankment. The channelled view from the property would be dominated by road crossing in the immediate context of view, along with a perception of the cutting into the domed drumlin landform to the south. Embankment planting would in time serve as a screen to traffic movement, although the imposition of the Scheme within the local context of view would remain. Extensive planting and profiling of the cutting interface would soften this element of the Scheme within the local context by the Design Year.	**LA**					**1**						**1**	
V10-18	**1**	Properties on Tullyrush Road	Rear views towards local rise in landform and drumlin farmland, filtered by vegetation. Acute views along the line of Tullyrush Road.	Rear views from the properties toward the Proposed Scheme would be screened to varying degrees by nature of local drumlin landform. There would be side elevation views toward the bridging point of Tullyrush Road and its associated earthworks. Embankment planting would integrate the crossing of Tullyrush Road by the Design Year. Extensive planting and hedgerow establishment along the Scheme corridor would serve as a filter to traffic movement where rear views of the Scheme are possible.	**LA**					**3**					**1**	**2**		
V10-19	**1**	Clustered properties along Tullyrush Road	Views across drumlin farmland towards local rise in landform, filtered by buildings/vegetation	The Proposed Scheme would be evident to south-eastward views from the properties where the road would rise on embankment and into deep cutting through a prominent, partially wooded drumlin landform in the central context of view. For most properties, the prospect would be heavily filtered by intervening vegetation and partially screened by local drumlin landform and adjacent buildings, although one dwelling would have more direct, front elevation views. There would be side elevation views toward the bridging point of Tullyrush Road and its associated earthworks. Embankment planting would serve to integrate the context of the Tullyrush Road crossing by the Design Year. Extensive planting and hedgerow establishment along the route alignment towards cutting would serve as a filter to traffic where the Scheme becomes exposed to views. The formation of cutting through the drumlin farmland to the south would remain an evident aspect of the landscape prospect in the longer term.	**LA**			**1**	**4**	**1**				**1**	**5**		
V10-20	**1**	Isolated properties between Tullyrush Road and Rarone Road	Properties recessed within drumlin farmland, partially enclosed by vegetation	The Proposed Scheme would pass to the west of the properties, rising on embankment and into deep cutting through a nearby, partially wooded drumlin landform.	**LA**				**2**	**1**				**2**		**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				The Scheme would be visible on embankment before entering cutting, although views would be filtered by property outbuildings and field boundary vegetation. The proximity of the Scheme to the westernmost property (approx 100m) would mean that, at Year of Opening the road would occupy the foreground context of views. Establishment of embankment planting and scrub woodland planting would serve as a screen to views in the Design Year although the imposition of the Scheme within the local context of view would remain												
V10-21	**1**	Properties and farmsteads near junction of Tullyrush Road/Seskinore Road	Slightly elevated prospects from drumlin crests across undulating farmland to the north and east	The Proposed Scheme would cross Tullyrush Road approx 0.75km from the properties, where it would be a distant yet discernable aspect of views from raised locations on shallow drumlin crests. A 2 storey with front elevation prospects along the line of Tullyrush Road would discern the route alignment more noticeably at Year of Opening, although by Design Year the establishment of embankment and hedgerow planting would integrate the road within the setting from this distance of view.	**SA**			**4**	**1**				**1**	**4**			
V10-22	**1**	Farmstead and dwellings on Rarone Road (single storey and 2 storey)	Localised views across farmland, contained by drumlin landform and partially filtered by property vegetation. Main focus of views to east.	The Proposed Scheme would emerge from deep cutting to cross Rarone Road at grade, with the local road re-aligned via an overbridge. The mainline itself would be mostly screened by landform and filtered by vegetation, although the earthworks to the proposed overbridge for Rarone Road would be a foreground aspect of views. The more elevated 2 storey dwelling would have prospects across the bridge construction and beyond toward the line of the route as it runs south. The establishment of planting to the overbridge earthwork embankments would, by the Design Year have softened the overbridge setting substantially. It would provide a filter to traffic movement along Rarone Road and of more distant prospects of the Scheme mainline.	**LA**					**2**					**2**		
V10-23	**1**	Isolated property on Rarone Road	Large property with local open views across drumlin farmland, interrupted by local woodland plantation. Main focus of views to west.	The Proposed Scheme would pass in close proximity to the south of the property, having crossed Rarone Road at grade and with the local road re-aligned via an overbridge. The raised diversion of Rarone Road would become the primary focus from the property's front elevation, with the mainline being screened to the north by the overbridge earthworks. Where the Scheme would pass south of the property, the profiling of deposition materials would create a false cutting and so limit visibility mainly to tops of traffic from side elevation and oblique front elevation views. The establishment of hedgerow planting would provide an additional screen measure to traffic movement along the mainline by the Design Year. The establishment of planting to the overbridge embankments would softened its appearance, although the imposition of the Scheme within the local context of view would remain	**VLA**					**1**						**1**	
V10-24	**1**	Isolated properties on Rarone Road	Localised views across drumlin farmland.	The properties would experience varying aspects of view, mainly towards the re-alignment of Rarone Road on overbridge and with the mainline screened by cutting. Establishment of vegetation would reduce the perception of the overbridge by the Design Year.	**MA**				**4**					**4**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V10-25	**1**	Isolated properties on Augher Point Road	Filtered views west across drumlin farmland.	Comments as per V10-24, although the nature of views is more filtered by local vegetation.	**SA**			**2**						**2**			
V10-26	**1**	Properties on Rarone Road	Localised views across open drumlin farmland, partially obscured by local landform	The properties would experience open, mid distant views towards the Proposed Scheme running at grade and shallow cutting between drumlin landforms. Planting measures would re-connect the severed field pattern and re-instate hedgerow cover lost to the development. The road would be less visible by the Design Year because of this, but would remain a noticeable aspect across the field of view from properties.	**MA**				**2**						**1**	**1**	
V10-27	**1**	Properties along Augher Point Road to junction with Drumconnelly Road	Slightly elevated, oblique and rear elevation views westwards across shallow rolling farmland with the distant form of Crocknatummoge forming the horizon line.	The Proposed Scheme would pass to the west of the properties, varying between shallow cutting and embankment at a distance of approx 130m. Properties would be slightly elevated above the route alignment, which would appear in the foreground of far reaching, mainly oblique prospects towards Crocknatummoge. There would be a marked nature of change to views, particularly for the larger of the properties with more open views across the line of the Scheme. Planting measures would look to combine hedgerow establishment and planting on shallow embankment to filter traffic movement by the Design Year without detracting from the wider context of view. The imposition of the Scheme within the local context of view however would remain.	**LA**					**5**						**1**	**4**	
V10-28	**1**	Isolated farmstead east of Rarone Road	Farmstead set on drumlin hill crest with channelled views to east and north, partially obscured by farm buildings	The route alignment would be evident within elevated, far reaching views north from the farm dwelling, where views in other directions are otherwise contained by surrounding farm buildings and mature property vegetation. Due to the perceived importance of the view, the effect on visual amenity would be more pronounced. Planting measures would re-connect the severed field pattern and integrate the road within the drumlin farmland by Design Year, although the elevated nature of view would still perceive the course of the road.	**LA**					**1**						**1**		
V10-29	**1**	Properties on Augher Point Road	Rear views from properties westwards across open drumlin farmland	The Proposed Scheme would pass in close proximity to the west of the properties in deep cutting. Properties would perceive the top of cutting, with oblique open prospects to the north-west where the Scheme would be a mid-distant feature. Hedgerow establishment along the top of cuttings would reduce perception of the Scheme corridor locally by the Design Year, while planting measures to the north would integrate the route alignment in the drumlin farmland setting.	**LA**				**2**						**2**		
		NCN 92 (& Belfast to Ballyshannon Cycle Trail)	Local views across drumlin farmland along the line of Drumconnelly Road.	The re-alignment of Drumconnelly Road via overbridge would be evident to local views from the cycle route. The dual carriageway would be locally visible on its approaches, although the drumlin terrain would limit widespread prospects.	**MA**			*						*

V11 – Moylagh to Newtownsaville

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V11-01	**1**	Clustered properties at Moylagh	Properties within local stream course recess and on rising ground to north; main views orientated to west, looking across shallow drumlin farmland within a foreground context of more pronounced landform.	The Proposed Scheme would pass to the south-west of the properties, emerging briefly from cutting on high embankment across the proposed J14 at Moylagh. Augher Point Road and Moylagh Road would be re-aligned at grade, with slip roads rising to meet the elevated mainline. Effects would vary by property type and location, but views would typically be across the route alignment and would register the elevated carriageway, such that the nature of change in many instances would be major in scale. The Scheme would appear as a prominent foreground element, with visible extensive cutting through local landform. Extensive planting to the junction setting would serve to soften its context by the Design Year although the prominence of the Scheme at a local level would remain, particularly to more elevated properties in the group.	**LA**			**2**	**2**	**6**				**3**	**5**	**2**	
V11-02	**1**	Properties on Moylagh Road	Localised views from properties set within drumlin landform	The properties would have direct and immediate views across the proposed J14 at Moylagh, where the mainline carriageway would emerge from deep cutting to cross Moylagh Road on extended embankment. The loss of local vegetation and scale of earthworks would be highly evident at Year of Opening and would represent a major change from the existing nature of views. Planting establishment would substantially soften the junction setting and provide a screen to traffic movement by the Design Year, although the imposition of the junction within the local context would remain.	**LA**					**2**					**1**	**1**	
V11-03	**1**	Isolated properties on Moylagh Road	Localised views across drumlin farmland.	The properties would have oblique views of a limited part of the Proposed Scheme where it passes south of the proposed J14 and into deep cutting south of Moylagh. Establishment of vegetation would mean that by the Design Year there would be no noticeable change in the nature of view from these aspects.	**SA**		**1**	**1**					**2**				
V11-04	**1**	Single storey property on Augher Point Road at Moylagh	Views to immediate rise in landform east of Augher Point Road	The Proposed Scheme would pass above the line of view of the property in close proximity, running from high embankment into deep cutting across the pronounced hill slope that faces the property. The carriageway would be screened from direct view due to the immediate hill slope and the elevation of the carriageway on embankment, although some traffic movement would be evident above the line of view as the Scheme enters cutting. Sections of cutting slope would be evident in proximity above the line of view. Extensive planting to the embankment slopes would substantially reduce the effect of the Scheme by the Design Year when the property	**LA**					**1**					**1**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				would be effectively screened.													
V11-05	**1**	Single and 2 storey properties along Legacurry Road	Views ranging from west to south across immediate drumlin farmland; distant prospects of Crocknatummoge	The Proposed Scheme would pass in cutting approx 250m west of the properties, before emerging on low embankment between drumlins and below the line of view. The Scheme would form an intermittent foreground element from elevated viewpoints, more evident to the south, but would not detract from prospects across the rural landscape towards Crocknatummoge.	**MA**			**2**	**3**				**1**	**4**			
V11-06	**1**	Scattered properties along Augher Point Road	Local views east across open drumlin farmland	The Proposed Scheme would pass to the east of the properties, in deep cutting and low embankment through drumlin farmland. The Scheme would form an intermittent element of oblique prospects from properties.	**MA**			**3**					**1**	**2**			
V11-07	**1**	Properties on Legacurry Road	Open views west across drumlin farmland	The Proposed Scheme would pass west of the properties and predominantly below their line of view, beyond a shallow crest of drumlin landforms. Views of the road would be limited and intermittent, such that at the Design Year when planting matures there would be no material effect on views from the properties.	**SA**			**3**					**3**				
V11-08	**1**	Single storey property north of Greenmount Road	Open views north east across rising local drumlin farmland	The Proposed Scheme would pass approx 200m east of the properties, mainly on shallow embankment and roughly at grade with their line of view. The road would form be a continuous, mid-distant feature across a wide field of view against a rising, local horizon. Loss of mature hedgerow would be a noticeable change to the context of view. Hedgerow establishment and targeted planting along the embankment would re-connect severed field margins and provide a filter to traffic movement by the Design Year, although the imposition of the Scheme within the local context of view would remain.	**LA**					**1**						**1**	
V11-09	**1**	Single storey property north of Greenmount Road	Views predominantly south and east across local drumlin farmland.	The property would experience oblique views towards the Proposed Scheme where it crosses Killadroy Road and Greenmount Road. Extensive planting along the raised embankments of the dual carriageway and in the vicinity of the re-aligned connection of Killadroy Road and Greenmount Road would soften the context of view by the Design Year.	**SA**			**1**						**1**			
V11-10	**1**	Farmstead north of Killadroy Road	Slightly elevated views south-west across shallow drumlin farmland; filtered by hedgerow vegetation	The Proposed Scheme would pass approx 150m to the south-west of the farm dwelling, mainly on shallow embankment and below the line of view. The road would be a continuous feature in the foreground context of view, heavily filtered to the south by mature vegetation surrounding the property. Loss of mature hedgerow would be a noticeable change to the context of view. Hedgerow establishment and a targeted belt of planting along the eastern margin of the Scheme would compensate for the loss of mature hedgerow. It would provide a screen measure by the Design Year, without compromising the more distant prospects afforded from the property.	**LA**				**1**						**1**		
V11-11	**1**	Single storey property south of Killadroy Road	Views north-west (front elevation) and south-west (side elevation) across shallow drumlin farmland; filtered by mature hedgerow vegetation	The Proposed Scheme would pass in close proximity to the west of the property, mainly on shallow embankment and below the line of view. The road would form a major aspect of front elevation views from the property, which would look along the line of the road as it approaches from the north-west. Prospects from the side elevation are important	**LA**					**1**						**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				from the dwelling and would view directly above and across the line of the route. Loss of mature hedgerow would be a noticeable change to the context of view. Hedgerow establishment and a targeted belt of planting along the eastern margin of the Scheme would compensate for the loss of mature hedgerow. A large block of planting directly to the side elevation of the property would provide a screen to the carriageway and traffic movement, although the nature of views would still be significantly affected.													
V11-12	**1**	Cluster of farmsteads and dwellings at the junction of Greenmount Road and Killadroy Road	Local views across drumlin farmland, part filtered by vegetation	The Proposed Scheme would cross Greenmount Road on high embankment, to the immediate east of the properties. The nature of change experienced would vary by property type and location. The farmstead on Killadroy road would experience rear property, upper floor views along the line of the route to the north, with partially obscured views from the front upper floors where the Scheme crosses Greenmount Road. Properties on or near the junction of Killadroy Road with Greenmount Road would have oblique to direct views of the Scheme where it passes on high embankment, with the two single storey dwellings south of Greenmount Road experiencing the most significant change due to their prospect and proximity. Significant planting along embankment slopes would soften the profile of the road and provide a screen to traffic movement, however the proximity of the Scheme within the local context of view would remain highly evident.	**LA**					**4**					**2**	**2**	
V11-13	**1**	Single storey property on Greenmount Road	Views south across shallow drumlin farmland, filtered by mature field boundaries	The property would have oblique to direct views of the Proposed Scheme as it descends from embankment across Greenmount Road and continues south towards Routing Burn. Views would be filtered to some extent by outgrown field boundary vegetation, although the route alignment would be a continuous feature in what is otherwise a broad, well vegetated rural prospect. The embankment earthworks south of Greemount Road would be evident in oblique views. Planting along embankment slopes and hedgerow establishment would soften the profile of the crossing and integrate the scheme within the well vegetated pattern of the local landscape, however the proximity of the Scheme within the local context of view would remain evident.	**LA**					**1**						**1**	
V11-14	**1**	Properties on Killadroy Road	Views east across local drumlin farmland, interrupted by adjacent landform and filtered by outgrown field boundary vegetation.	Properties would experience views towards the Proposed Scheme where it passes to the south-east on embankment through vegetated shallow drumlin farmland and across Routing Burn. Loss of mature, outfield margins and vegetation would be evident within views. The Scheme would be intermittently visible at the bridging point of Routing Burn and along shallow drumlin crests to the south, although the provision of environmental barriers would serve as a partial screen to traffic movement. The establishment of planting measures would integrate the route alignment by the Design Year.	**LA**			**1**	**4**						**4**	**1**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V11-15	**1**	Properties along Routingburn Road	Views across local drumlin farmland, partly obscured by local landform	The Proposed Scheme would pass at grade to the east of the properties. The nature of change experienced would vary with property type and aspect, with oblique to direct views across locally undulating farmland. Views would be locally fragmented in nature, with the Proposed Scheme partially visible between drumlin landforms. The easternmost single storey dwelling along Routingburn Road would view directly north along the route alignment and would experience the greatest nature of change, although screen bunding alongside the property would serve as a partial screen at Year of Opening. Planting establishment along the line of the earth bund, together with hedgerow establishment along the line of the Scheme would provide a screen to traffic movement by the Design Year.	**LA**				**3**	**1**				**2**	**1**	**1**	
V11-16	**1**	Isolate farmstead south of Routingburn Road	Open views across shallow and well vegetated drumlin farmland to the south and west.	The Proposed Scheme would pass to the west of the property and below its line of view, varying from low cutting to low embankment. Views would be fragmented by outbuildings and vegetation, although evident in proximity where the road becomes exposed to view.	**MA**			**1**						**1**			
V11-17	**1**	Isolated properties east of Killadroy Road	Views across open drumlin farmland filtered by hedgerow vegetation	The Proposed Scheme would pass in close proximity to the east of the dwellings, varying from shallow embankment to cutting. Both properties would have oblique views, filtered by mature vegetation to each of the property boundaries. The easternmost dwelling would have direct prospects north along the line of the route and in closer proximity. Hedgerow planting along the Scheme boundaries would serve to reconnect the severed field pattern and integrate the Scheme with the local, intimate pattern of small irregular field sizes and mature boundary hedges, such that effects to property views would reduce by the Design Year.	**LA**				**1**	**1**				**1**	**1**		
V11-18	**1**	Isolated properties on Killadroy Road	Elevated and far reaching views northwards over drumlin farmland; the Sperrin Hills form a distant horizon	The Proposed Scheme would be visible as a more distant element across a wide field of view, set below the main line of focus to the distant Sperrin Hills. Planting establishment would effectively integrate the Scheme and limit its perception from this prospect in the Design Year.	**MA**			**1**	**1**					**1**	**1**		
V11-19	**1**	Isolated property north of Lisnarable Road	Open views northwards from drumlin crest across drumlin farmland	Comments as per V11-18	**MA**				**1**					**1**			
V11-20	**1**	Group of properties near Junction of Routingburn Road and Springhill Road	Open views west across drumlin farmland, filtered by hedgerow vegetation	The Proposed Scheme would appear as a distant and very much intermittent aspect of far reaching views, heavily filtered by mature boundary vegetation set within a small, irregular field pattern. Planting establishment would effectively integrate the Scheme and limit its perception from this prospect in the Design Year.	**N**		**11**	**2**					**13**				
V11-21	**1**	Group of properties along Springhill Road	Views west across shallow drumlin farmland, filtered by hedgerow vegetation	The Proposed Scheme would pass 0.5km to the west of the properties, generally at grade and slightly below their line of view. The route alignment would appear as a mid-distant and intermittent aspect of views, heavily filtered by mature boundary vegetation set within a small, irregular field pattern. Planting establishment would effectively integrate the Scheme and limit its perception from these prospects by the Design Year.	**SA**			**8**					**7**	**1**

V12 – Newtownsaville to Errigal

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V12-01	**1**	Cluster of properties on Springhill Road	Views west across local drumlin landscape towards Newtownsaville	The Proposed Scheme would pass 200m to the west of the properties and towards Newtownsaville, varying between shallow cutting and embankment. Views toward the Scheme would be fragmented by nearby farmsteads and partially by landform. Hedgerow establishment and planting would provide an additional filter to traffic movement by the Design Year.	**LA**			**1**	**2**					**3**			
V12-02	**1**	2 storey farmstead west of Springhill Road	Open views south, flanked by rise of Tullanafoile Hill	The Proposed Scheme would pass adjacent to the west of the property in shallow cutting. The dwelling would have open views to the south, directly across the line of the route which would be partially screened by earth bunding. Establishment of planting along the line of the bunding would create a substantial filter to views along the line of the route and to traffic movement; however the physical proximity of the Proposed Scheme would still represent a significant effect at Design Year.	**VLA**					**1**						**1**	
V12-03	**1**	Single storey property at junction of Springhill Road and Crockmore Road	Open localised view towards Newtownsaville across a wooded stream course	The Proposed Scheme would pass directly west of the property, running on embankment across Springhill Road and level with the dwelling's line of view. The carriageway alignment and embankments would largely obstruct the current prospect and would constitute the main focus of view from the property, although the perception of traffic movement at Year of Opening would be lessened by earth bunding. Hedgerow establishment and targeted planting along the embankment would soften the appearance of the Scheme by the Design Year, although its imposition within the local context of view would remain evident.	**VLA**					**1**						**1**	
V12-04	**1**	Cluster of residential and commercial properties at Newtownsaville	View east to farmland across wooded stream course; some views partially obscured by adjacent properties.	The Proposed Scheme would pass to the east of Newtownsaville, running north-south on embankment across Springhill Road. Views from properties would be partially obscured by adjacent properties and mature tree canopies associated with the river course. Where clear prospects occur, these would be of the route alignment set on embankment within a local context of view. Planting establishment along the embankment length would integrate with the existing riverside setting, such that at the Design Year the Scheme alignment would be heavily filtered by vegetation.	**LA**			**2**	**7**					**1**	**8**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V12-05	**1**	Line of properties along Lisnarable Road, Newtownsaville	Open views east across wooded stream course to farmland	The properties would have more wide reaching, uninterrupted prospects towards the Proposed Scheme than for those described in V12-04, partially filtered by mature, bare tree canopies in the winter of the Opening Year. Establishment of hedgerow planting would, in combination with existing riverside vegetation provide an effective screen by the summer of the Design Year.	**LA**					**3**				**3**			
V12-06	**1**	Isolated properties along Lisnarable Road, northern edge of Newtownsaville	Views north and north east over descending hill slope towards rolling drumlin farmland	Description as per V12-05, although the nature of view from these properties is largely oblique.	**MA**				**2**					**2**			
V12-07	**1**	Single storey property on Newtownsaville Road	Primary views eastward across farmland towards Tullanafoile Hill	The Proposed Scheme would be a visible component within a broad line of view from the property, seen on extended embankment and slightly above the line of view east towards Tullanafoile Hill. Extensive planting along the exposed embankment would soften the appearance of the Scheme by the Design Year and provide a screen to traffic movement, however the presence of the road within the local context of view would remain evident.	**LA**					**1**						**1**	
V12-08	**1**	Isolated properties/farmsteads along line of Tullanafoile Road	Elevated views to west across line of Newtownsaville Road towards northern extents of Beltany Hill	The Proposed Scheme would pass to the immediate west, flanking the slope of Tullanafoile Hill in sidelong cut/embankment below the general line of view. While not interrupting the context of far reaching prospects from the dwellings, the Scheme would still be a perceived component of the view and prominent in oblique prospects north and south along the line of the valley. Extensive planting along the exposed cutting and embankment would help integrate the Scheme by the Design Year, however the presence of the road within the local context of view would remain evident.	**LA**					**3**					**1**	**2**	
V12-09	**1**	Properties/farmsteads along line of Tullanafoile Road	Elevated views to south west across line of Newtownsaville Road towards Beltany Hill	Similar in context to V12-08, although primary views are orientated north-west/south-east and more oblique in nature towards the Proposed Scheme, partially obscured by outbuildings and mature boundary vegetation.	**LA**			**1**		**1**				**1**	**1**		
V12-10	**1**	Single, 1.5 and 2 storey properties near School Road.	Slightly elevated views east across line of Newtownsaville Road towards Tullanafoile Hill	The Proposed Scheme would be evident on the flanking slope of Tullanafoile Hill, where it would run in continuous sidelong cut and extended embankment at a distance of approx 300m. The Scheme would be a perceived component of what would otherwise be a remote, rural setting. Extensive planting along the exposed cutting and embankment would help integrate the Scheme by the Design Year, however the presence of the road within the local context of view would remain evident.	**LA**					**3**					**3**		
V12-11	**1**	Single storey property on Newtownsaville Road	Local, open views to north-east across shallow valley and towards Tullanafoile Hill	The Proposed Scheme would run on embankment across the main line of view from the property on extended embankment. It's proximity in what would otherwise be a remote rural setting would constitute a major change in the nature of view. Extensive planting along the exposed cutting and embankment would help integrate the Scheme by the Design Year, however the presence of the road within the local context of view would remain evident.	**LA**					**1**						**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V12-12	**1**	Farmstead along line of Tullanafoile Road	Elevated view south-west across Newtownsaville Bog and shallow rise towards Beltany Hill	The Proposed Scheme would along the north-eastern edge of Newtownsaville Bog, across and slightly below the line of view of the farmstead. It's proximity in what would otherwise be a remote rural setting would constitute a major change in the nature of view. Targeted planting along the exposed embankment lengths would integrate the Scheme with the adjacent bog habitat by the Design Year, although the presence of the road within the local context of view would remain an evident feature.	**LA**					**1**						**1**	
V12-13	**1**	Properties off Cormore Road	Views east from local rise in hill form across Newtownsaville Bog towards Tullanafoile Hill	The Proposed Scheme would along the north-eastern edge of Newtownsaville Bog, across and slightly below the line of view of the farmstead at a distance of approx 400m. The bog habitat would provide a partial screen to the route alignment from this prospect, although the road would remain a largely continuous, mid-distant aspect of view as it runs along the line of Tullanafoile Hill. Targeted planting along the exposed embankment lengths would integrate the Scheme with the adjacent bog habitat by the Design Year, although the presence of the road within the wider context of view would remain evident.	**LA**				**1**	**1**					**1**	**1**		
V12-14	**1**	Properties on School Road and Glenalt Road	Elevated views east across shallow valley towards Tullanafoile Hill	The Proposed Scheme would be perceived as a distant element within wide reaching views, such that the nature of change would be minor. The establishment of planting by the Design Year would be such that the Scheme would not register in views to any noticeable degree.	**SA**			**4**					**3**	**1**			
V12-15	**1**	Single storey property on Tullanfoile Road	Elevated, channelled views south-east across wooded valley recess and shallow rolling farmland	The Proposed Scheme would pass south of Tullanafoile Hill, crossing Tullanafoile Road on high embankment and below the line of view of the property, which would have an elevated prospect from the junction with Garvaghy Road. Channelled views from the property would register the route alignment as it veers south from the crossing of Tullanafoile Road. The main context of view would substantially change, although the road would be a noticeable component of what would otherwise be a remote and appealing rural prospect. Extensive planting along embankment slopes would soften the context of the road by the Design Year.	**LA**				**1**						**1**		
V12-16	**1**	Properties along Newtownsaville Road	Views north east across shallow valley towards well vegetated rolling hill slopes and farmland	The Proposed Scheme would be visible on high embankment where it crosses Tullanafoile Road at a distance of 300m. The route alignment would be largely continuous as a mid-distant feature across the aspect of view, partially screened by local rises in landform. At Year of Opening the open embankments would be highly visible from these prospects. By the Design Year, the establishment of planting would have integrated earthworks with adjacent woodland cover and hedgerows, although the road would remain evident within the rural setting.	**LA**				**1**	**2**					**1**	**2**		
V12-17	**1**	Single and 2 storey properties between Garvaghy Road and Tycanny Road	Properties located on a local rise of landform with open, slightly elevated views north and west across shallow valley.	Views north from the properties would register the route alignment as it approaches and crosses Tullanafoile Road on high embankment, generally below the line of view and partially screened by landform/vegetation. For one property, the prospect would be more	**LA**				**3**	**1**					**2**	**1**	**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				pronounce due to its open aspect and elevated position; in this instance the nature of change would be significant in what is otherwise a remote and appealing rural context. At Year of Opening the elevated carriageway would be visible from the properties, at varying distance and aspect. By the Design Year, the establishment of planting would have integrated earthworks with adjacent woodland cover and hedgerows, although the road would remain evident within the rural setting.													
V12-18	**1**	Isolated farmstead between Garvaghy Road and Tycanny Road	Open views south west across rolling farmland	The Proposed Scheme would pass in cutting within 100m to the south of the dwelling, evident within a wide field of view from its front elevation. The context of view would significantly change, with the road forming a continuous foreground element across an otherwise open and appealing remote rural prospect. The Scheme would remain visible in oblique views towards Tycanny Hill. Additional planting along the northern edge of the road would provide an effective screen by the Design Year.	**LA**					**1**							**1**	
V12-19	**1**	Properties along Garvaghy Road	Elevated views south across rolling farmland	Oblique prospects would be experienced towards the route alignment as it passes towards Tycanny. The road would be fragmented and filtered by vegetation from these prospects, such that the nature of change would not be significant.	**SA**			**3**						**3**			
V12-20	**1**	Farmsteads along Newtownsaville Road	Channelled views, partially obscured towards Tycanny Hill	The Proposed Scheme would pass north of these properties, in deep cutting across the face of Tycanny Hill. The carriageway and traffic movement would be screened from front property views directly across Tycanny Hill and exposed to oblique views where it emerges from cutting to the north and south. The exposed upper extent of cutting through Tycanny Hill would be highly evident within the context of views. Grading of the upper cutting slope and it's re-establishment with grass/scrub planting would soften its appearance by the Design Year. Targeted planting along embankment slopes at the transition from cutting would provide a screen measure once established.	**LA**			**1**	**2**	**1**				**2**	**1**	**1**	
V12-21	**1**	Farmsteads along Newtownsaville Road	Channelled views, partially obscured towards Tycanny Hill	Comments as per V12-20	**LA**					**2**						**2**	
V12-22	**1**	Isolated property on Newtownsaville Road	Large property with open, exposed views locally towards Tycanny Hill	The Proposed Scheme would exit deep cutting across Tycanny Hill, passing within 100m of the property on sidelong cutting/embankment and above the line of view. The property is large, with prospects from all elevations. The route alignment would represent a major change in the context of northward views towards across Tycanny Hill from the rear of the property, also to acute views along the line of the route from side elevation windows. A significant belt of woodland planting to the rear of the property would provide a substantial screen by the Design Year; however the rural context of existing prospects from the property would remain affected.	**VLA**						**1**						**1**	
V12-23	**1**	Isolated farmstead on Newtownsaville Road	Channelled view north towards Tycanny Hill, partially obscured by farm buildings and vegetation	Immediate views from the property would be screened by local landform and restricted by immediate boundary vegetation. Minor, oblique prospects from the property setting would be screened by planting establishment by the Design Year.	**MA**			**1**					**1**				

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V12-24	**1**	Isolated property on Rarogan Road	Elevated views south across open ridge slope farmland; Slieve Beagh forms distant horizon	The property would experience a narrow, oblique view toward the Proposed Scheme on a short section of embankment where it passes between drumlins, below the line of view. The context of elevated and wide reaching views would not unduly change and the establishment of planting by the Design Year would further limit effects.	**SA**			**1**						**1**			
V12-25	**1**	Isolated property north of Newtownsaville Road	Open and wide reaching view across open ridge and drumlin farmland.	The Proposed Scheme would pass directly south of the property and below its immediate line of view. The road would represent a significant change in foreground context to the quality of view experienced from the property, although over a restricted distance where the road emerges between cuttings. Hedgerow establishment and planting in the vicinity of the re-aligned access tracks would filter views of this local but narrow road section to the front of the property.	**LA**						**1**					**1**	
		Carleton Trail, Knockmany	Views across the ridge landscape from Knockmany Hill	The Proposed Scheme would be just discernable from the higher stretches of the trail at Knockmany, although heavily filtered by vegetation and mostly screened by landform.	**SA**			*					*

V13 – Errigal to Ballygawley

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V13-01	**1**	Properties along Errigal Road	Open views south across local rise of Errigal Keerogue Church	The Proposed Scheme would largely be screened by landform where it emerges from deep cutting to the south. The elevated prospects from the properties would register the Scheme as a fragmented and distant element of the wider landscape, such that by the Design Year there would not be any evident change.	**SA**			**2**					**2**				
V13-02	**1**	Properties along Glenhoy Road	Open views east along line of Glenhoy Road and across hummocky moraines along the ridge slope	The properties would experience oblique views towards Errigal, where the Proposed Scheme would emerge from cutting beneath the re-alignment of Glenhoy Road via overbridge. Planting establishment would integrate the overbridge into the landscape setting by the Design Year.	**SA**			**3**					**1**	**2**			
V13-03	**1**	Errigal Keerogue Church	Tranquil and historic location with broad, far reaching and appealing views south across the drumlin farmland of the Clogher Valley. Significant value as a landscape feature of which outward views and prospects are integral.	The Proposed Scheme would pass in close proximity to the south of Errigal Keerogue, emerging from deep cutting and below the line of view from the setting. The re-alignment of Glenhoy Road via overbridge would be a visible feature in wide reaching prospects from the churchyard. The nature of change experienced would be major. The route alignment, although below the general line of view would be perceived as a conspicuous foreground feature of what is an otherwise appealing and far reaching prospect. The particular sense of tranquillity associated with the setting would be significantly affected. Planting establishment on the embankment slopes of the re-aligned Glenhoy Road would help soften the appearance of the structure and integrate it within the local context by the Design Year. However the imposition of the Scheme across the local context of a valued view would remain highly evident.	**VLA**						**1**						**1**	
V13-04	**1**	Single storey properties on Glenhoy Road, Errigal	Open views locally to north across rising hummocky moraines on ridge face	The properties would have exposed rear property views where the Proposed Scheme emerges from deep cutting south of Errigal, running at grade and at a distance of 100m. This would represent a major change to the context of view from this prospect, although the main prospects from the front of the properties looking south would remain unchanged. The re-alignment of Glenhoy Road on overbridge would be evident as an oblique/acute feature of views from the properties. Screen bunding and targeted planting measures along the southern boundary of the Scheme would reduce the impact of traffic movement by the Design Year, while planting establishment on the embankment slopes of the re-aligned Glenhoy Road would help soften the appearance of the structure. However the imposition of the road in the local context of view would remain evident.	**LA**			**1**	**1**	**1**				**1**	**1**	**1**		
V13-05	**1**	Single storey property on Glenhoy Road	Localise front property views towards Errigal Keerogue Church; wide reaching rear property views south across shallow drumlin farmland.	The Propose Scheme would pass 100m to the north of the property at grade, upon emerging from deep cutting to the south of Errigal Keerogue. Views from the front elevation of the property would be across the line of the route, which would be largely screened by garden boundary vegetation, landform and earthwork embankment	**VLA**					**1**						**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				construction to accommodate the re-alignment of Glenhoy Road. The re-alignment of Glenhoy Road and visible cutting north of Errigal would represent a moderate degree of change in the context of view. Oblique rear views from the property would register the route alignment, running broadly level with the line of view on sidelong cutting and embankment across shallow farmland. Planting establishment on embankment slopes and re-instated hedge lines along side roads would integrate the Scheme by the Design Year, although its general imposition in the local context of views would remain evident.												
V13-06	**1**	Properties on Glenhoy Road	Open views locally to north across rising hummocky moraines on ridge face	Views would be similar in outlook to V13-04, although in this instance from front and side elevations and oblique in nature, with more fragmentation of view due to topography and intervening properties.	**MA**				**2**					**1**	**1**		
V13-07	**1**	Group of properties bordering Glenhoy Road	Local views set within moraine farmland, occasional vistas across the broader landscape of Clogher Valley	The Proposed Scheme would pass to the south of the properties, with the re-alignment of Glenhoy Road on overbridge to the immediate west. Effects would vary with property aspect and location. The northernmost properties would have prospects towards the re-alignment of Glenhoy Road and the creation of embankment slopes to accommodate the overbridge construction. Some properties would have wider reaching views south, although filtered by mature vegetation and/or partially screened by drumlin landform. The nature of change would be limited to fragmented views of the route alignment. Properties to the south of Glenhoy Road would have open aspects across shallow drumlin farmland, where the Proposed Scheme would pass in close proximity and represent a significant aspect of change to the nature of view. Hedgerow establishment and planting to embankment slopes would soften the appearance of the Scheme by the Design Year, although its proximity in the local context of views would remain evident.	**LA**			**1**	**2**	**4**				**3**	**1**	**3**	
V13-08	**1**	Properties along line of Glenchuil Road	Elevated and expansive views south across the Clogher Valley towards Slieve Beagh	The Proposed Scheme would be a distant element of far reaching prospects across the Clogher Valley, fragmented by landform and vegetation. The nature of change would be limited, reducing in effect by the Design Year when planting measures along the line of the corridor have established.	**SA**		**1**	**12**					**1**	**12**			
V13-09	**1**	Ballynasaggart	Views south across local floodplain of stream course within moraine/drumlin farmland	The Proposed Scheme would pass to the south of Ballynasaggart, running at grade and in cutting through drumlin landform. Effects would vary with property aspect and location, generally direct and/or oblique views to the south-west where the route alignment would run at grade and filtered by existing woodland planting. The overbridge construction along Ballynasaggart Road would be an evident aspect, more immediate to some properties and constituting a greater change in the context of view. Embankment planting to overbridges and block planting to augment existing woodland would create an effective screen to views from the village in the Design Year. Some filtered views of traffic movement would remain evident.	**LA**				**8**	**1**					**9**		

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V13-10	**1**	Properties near junction of Ballynasaggart Road and Sess Road	Views north and west across low scrub woodland towards Ballynasaggart and Brougher Ridge line	Properties would have oblique and slightly elevated, filtered views across local scrub woodland in the direction of the Proposed Scheme, visible intermittently at winter Year of Opening although partially screened by the deposition landform creation around the overbridge setting. The overbridge construction earthworks for Ballynasaggart Road would be evident to the easternmost property from acute views, again the deposition contouring softening the appearance of the overbridge from this prospect. Embankment planting to overbridges and block planting to augment existing woodland would create an effective screen by the Design Year from these prospects.	**MA**			**1**	**1**				**1**	**1**			
V13-11	**1**	Properties on Sess Road	Filtered and channelled views north from crest line.	The Proposed Scheme would appear within locally channelled views, below the line of view and heavily filtered by existing vegetation in the vicinity of the properties. Establishment of planting would provide a further screen to traffic movement by the Design Year, for those lengths of road that are exposed locally from these aspects.	**MA**			**1**	**2**					**3**			
V13-12	**1**	Single storey farm dwelling north of Sess Road	Views north from local hill crest towards Ballynasaggart and the Brougher Ridge line	The Proposed Scheme would pass to the north of the farm at a distance of 400m, generally level with the property running on low embankment between drumlin landforms towards Ballynasaggart. The context of view from the property towards the village would be disrupted by the route alignment, visible across a wide field of view though at distance. A farm access overbridge would be a discernible feature at Year of Opening. By the Design Year, vegetation establishment across embankment slopes and across the adjacent attenuation pond area would soften the appearance of the road in the context of view.	**MA**				**1**						**1**		
V13-13	**1**	2 storey property on Feddan Road	Open views south-east across broad field pattern of shallow drumlin farmland.	The property would have elevated and direct views along the line of the Proposed Scheme where it emerges from cutting onto embankment in close proximity, south of Feddan Road. The carriageway would be an exposed and prominent feature of near, mid and far distant prospects from the property across a rural, shallow drumlin farmland. Mature property boundary vegetation would provide some screen to oblique foreground views of the carriageway as it emerges from cutting. The local field pattern is open with limited intervening vegetation. Planting measures are restricted to hedgerow establishment and scrub planting on embankment slopes, which in the longer term would soften the appearance of the Scheme although it would remain a significant aspect of views.	**LA**					**1**						**1**	
V13-14	**1**	Properties along Feddan Road	Elevated rear property views south and west from local hill crest, set above open drumlin farmland with a broad field pattern	The Proposed Scheme would pass approx 200m south of the properties on low embankment, running east towards the A4 corridor near Ballygawley. The route alignment would be below the line of view, but visible across a wide field of view. The local field pattern is open in nature with limited intervening vegetation. Planting measures are restricted to hedgerow establishment, which in the longer term would soften the appearance	**LA**				**1**	**2**					**1**	**2**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				of the Scheme although it would remain locally prominent within the landscape.													
V13-15	**1**	Group of properties bordeing Feddan Road, east of Ballynasaggart	Open views across drumlin farmland, often interrupted by hummocky nature of nearby hill forms	The Proposed Scheme would pass to the south of the properties, locally in extended cutting through drumlin landform. Prospects would be limited to oblique and interrupted lines of view along Feddan Road to the south east, where the route alignment would emerge from cutting.	**SA**			**6**	**1**					**7**			
V13-16	**1**	Properties in vicinity of Crewe Road, east of Ballynasaggart	Open views south from local ridge line within moraine landscape of ridge	The Proposed Scheme would form an intermittent but noticeable element of the landscape at Year of Opening, set below wide reaching and elevated views south across drumlin farmland. Hedgerow establishment along the line of the route alignment would effectively integrate the Proposed Scheme from these prospects by the Design Year.	**MA**				**3**					**3**			
V13-17	**1**	Properties on Ballynasaggart Road	Low lying properties with views east along shallow valley recess between drumlins	The Proposed Scheme would pass north of the properties on low embankment, running east towards the A4 corridor near Ballygawley. Views towards the route alignment would be oblique and not prominent. The local field pattern is open in nature with limited intervening vegetation. Planting measures are restricted to hedgerow establishment, which from this angle and context of view would effectively integrate the Scheme by the Design Year.	**SA**			**2**					**2**				
V13-18	**1**	Isolated property south of Annaghilla Road	Slightly elevated views north across open drumlin farmland and the old A4 Annaghilla Road, towards the Brougher Ridge line	The Proposed Scheme would be visible on continuous low embankment, running between drumlin landforms north of the property at a distance of approx 600m. Traffic movement would be evident in the direct line of view although at distance, such that at Design Year the establishment of hedgerow planting would effectively integrate the route alignment.	**MA**				**1**					**1**			
V13-19	**1 & 3**	Isolated 2 storey farmstead north of Annaghilla Road	Hill top location with exposed views north across open drumlin farmland towards the Brougher Ridge line	The elevated aspect of the property would give elevated views across the line of the Proposed Scheme, within a wide field of view where it passes within 200m north of the dwelling. Planting measures are restricted to hedgerow establishment and scrub planting on embankment slopes, which in the longer term would soften the appearance of the Scheme although it would remain a significant aspect of views.	**LA**					**1**						**1**	
V13-20	**1 & 3**	Isolated farmstead at junction of Feddan Road and Lettery Road	Views south west across immediate drumlin hill crest across local farmland	Views from the property would be largely screened by adjacent farm out buildings, with the Proposed Scheme passing in cutting well below the line of view, south of the dwelling. Some oblique views may be evident from upper floors, at distance eastward towards the A4 junction and west along the line of Feddan Road.	**SA**			**1**						**1**			
V13-21	**1 & 3**	Properties bordering the A4 corridor and Ballynany Road	Views across line of immediate line of A4 corridor to immediate drumlin hill slopes	Properties would be locally influenced by accommodation track provision across the A4 and modifications to existing landform. Views toward the Proposed Scheme would be largely screened by drumlin landform, but evident at the bridging point of Ballygawley Water with views partially filtered by vegetation. Planting establishment would soften the context of the Ballygawley Water crossing by the Design Year; however the Scheme would remain an aspect of oblique views from both properties.	**LA**			**1**	**2**					**1**	**2**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V13-22	**1 & 3**	2 storey farm dwelling on A4 Annaghilla Road	Acute views east along line of existing A4; views north partially screened by adjacent farm outbuildings, limited to upper floor prospects across shallow drumlin farmland.	The Proposed Scheme would be visible from the rear upper storey of the property where it approaches the junction with the A4 Annaghilla Road, mainly in terms of alteration of landform to cutting and some awareness traffic movement. The junction roundabout would be evident to oblique views from the property, in close proximity. Extensive planting to the junction setting would soften the appearance of the junction setting by the Phase 1 Design Year, although its proximity even to acute views would remain evident. Earthworks to accommodate Phase 3 of the Proposed Scheme would be evident from the point of phase construction, such that visual effects for this property would be experienced over two construction periods and with a final Design Year relating to Phase 3 works.	**LA**				**1**						**1**			
V13-23	**1 & 3**	Isolated property off Ballynany Road, south of the A4 corridor	Local views across drumlin farmland across the A4 corridor	The proposed junction roundabout of the Proposed Scheme with the A4 corridor (J15) would be partially visible to views from the property. The roundabout would sit within the context of the existing view of the A4 corridor and its associated traffic. Planting to the roundabout setting would soften the appearance of the roundabout and serve to filter views of the A4 carriageway on its approach to Ballygawley.	**SA**			**1**							**1**			
V13-24	**1**	Cluster of properties adjacent to A4 corridor	Views orientated east and south east across line of immediate A4 corridor	The immediate context of the A4 corridor from the properties would not markedly change, other than some loss of local scrub vegetation due to the re-alignment of the A4 mainline carriageway. The modification of the adjacent cutting would not be registered due to the aspect of properties. Roadside planting would re-establish the existing context by the Design Year and may offer some additional filter to traffic movement.	**SA**			**4**						**4**			
V13-25	**1**	2 storey farmstead north of Tullybryan Road	View south from local ridge; elevated view across line of A4 corridor	The immediate context of the A4 corridor from the property would not markedly change, other than some loss of local scrub vegetation due to the re-alignment of the A4 mainline carriageway. Roadside planting would re-establish the existing context by the Design Year and may offer some additional filter to traffic movement.	**SA**			**1**						**1**			
V13-26	**1**	Group of properties on Tullybryan Road	Heavily filtered views south and west along line of former/existing A4 corridor	The immediate context of the A4 corridor from the properties would not markedly change, other than the mainline carriageway being re-aligned slightly. Roadside planting would provide an additional filter to traffic movement by the Design Year.	**SA**		**2**	**5**						**7**			
V13-27	**1**	Properties in vicinity of A4/A5 road junction	Views west across immediate road junction, partially interrupted and contained by road embankment	The immediate context of the A4 corridor from the properties would not markedly change, other than the mainline carriageway being re-aligned slightly and distant prospects towards the widening of cutting and overbridge construction near Feddan Road. Roadside planting would provide an additional filter to traffic movement by the Design Year	**MA**		**3**	**1**						**4**			
V13-28	**1**	Properties east of A5/A4 junction roundabout	Views west along direct line of former/existing A4 road corridor	Properties would barely perceive change in their context of view towards the existing upgraded A4 corridor approach to Ballygawley.	**N**		**4**							**4**			
V13-29	**1**	Property on Lisbeg Road	Property set on local hill crest with open views west across A4/A5 junction setting and A4 corridor.	The property would experience a minor change in the context of view, where the A4 carriageway is re-aligned slightly on the approach to the	**SA**		**1**							**1**

				Ballygawley roundabout. However by the Design Year there would be no discernible change from the existing outlook.													
V13-30	**1**	2 storey farm dwelling and property east of Tullywinny Road	Elevated prospect across a wide field of view west through north, across the immediate A4 corridor to rising drumlin farmland	The properties would experience a minor change in the context of view, where the A4 carriageway is re-aligned slightly on the approach to the Ballygawley roundabout and provision of accommodation tracks. However by the Design Year there would be no discernible change from the existing outlook.	**MA**			**2**					**2**				
V13-31	**1**	2 storey properties on Remeen Drive, Ballygawley	Oblique/acute views towards the existing A4 corridor, heavily filtered and fragmented by adjacent buildings and mature vegetation.	The re-alignment of the A4 mainline on the approach to Ballygawley roundabout would not alter the context of view from the properties.	**SA**		**11**						**11**				
V13-32	**1**	2 storey properties on Grange Park, Ballygawley	Oblique/acute views towards the existing A4 corridor, partially filtered and fragmented by adjacent buildings and mature vegetation.	The re-alignment of the A4 mainline on the approach to Ballygawley roundabout would not alter the context of view from the properties.	**SA**		**23**	**8**					**31**				
V13-33	**1**	2 storey properties on Remeen Drive	Upper floor views south across new A4 approach to Ballygawley.	The properties would experience a minor change in the context of view, where the A4 carriageway is re-aligned slightly on the approach to Ballygawley. However by the Design Year there would be no discernable change from the existing outlook.	**MA**			**5**					**5**

V14 – Ballygawley to Aughnacloy

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V14-01	**3**	Properties at junction of Ballynany Road with Tullywinny Road	Recessed river course with localised views heavily contained by vegetation and local drumlin landform.	The Proposed Scheme would pass in close proximity to the properties, bridging over Ballygawley Water and then on extended sidelong cutting. Direct and oblique views would be heavily influenced by the modification of local landform along with loss of vegetation in the vicinity of Ballygawley Water. At Year of Opening the carriageway and traffic movement would be prominent, although with the establishment of planting to embankment slopes and within the attenuation pond area then prospects towards the road would be heavily filtered by the Design Year.	**LA**				**1**	**5**				**1**	**5**		
V14-02	**3**	Cluster of properties along Tullywinny Road	Localised views north to immediate drumlin landform	The Proposed Scheme would pass directly to the north of the properties on extended sidelong cutting. Views from the properties would change significantly, with the route alignment and associated earthworks assuming the primary focus. Earth bunding provision would, at Year of Opening reduce the exposure of the carriageway to open views although traffic movement would remain evident across the entire field of view from properties. Planting establishment would soften the appearance of the Scheme and provide a filter to views by the Design Year; however the imposition of the route alignment within a very local landscape context would remain.	**VLA**					**1**	**3**					**4**	
V14-03	**3**	Single storey and 2 storey poperties at junction of Tullywinny Road	Views south to an immediate local rise and crest in landform, with the distant horizon of Slieve Beagh	The Proposed Scheme would pass directly to the south of the properties, emerging from extended sidelong cutting and crossing Tullywinny Road on high embankment. Views from the properties would be restricted to immediate embankment slopes and would represent a major change in the nature of view experienced. Planting establishment on embankment slopes would soften the profile and provide a filter to traffic movement by the Design Year; however the physical imposition of the route alignment would remain.	**VLA**						**2**					**2**	
V14-04	**3**	Isolated property east of Lisdoart Road	Views north along rising ground to hill crest of Tullywinny Road; filtered views through local boundary vegetation	The Proposed Scheme would pass 250m to the north of the property, at a slightly higher elevation and varying from sidelong cutting through drumlins to embankment across Tullywinny Road. Views from the rear of the property in the direction of the route would be filtered by mature garden vegetation, but would register modification of local landform through cutting and with some awareness of intermittent traffic movement. By Summer of the Design Year, the establishment of planting along embankment slopes would provide a filter to traffic movement.	**LA**				**1**						**1**		
V14-05	**3**	Properties near Lisdoart Road	Recessed location with filtered views north along rising ground towards Tullywinny Road	Views from properties would be limited to intermittent prospects of traffic movement, the route alignment being situated above the line of view and fragmented by landform and vegetation. Planting establishment would integrate the Proposed Scheme within the landscape context from these prospects by the Design Year.	**SA**			**2**						**2**			
V14-06	**3**	Scattered properties south of Tullywinny Road	Prospects south across drumlin farmland, heavily filtered by mature boundary and hedgerow vegetation	The Proposed Scheme would pass to the south of the properties, varying between shallow cutting and higher, extended embankment	**SA**			**2**	**1**				**1**	**2**			

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				across lower lying ground between drumlin landforms. Views from properties would be slightly elevated, with the route alignment visible but heavily filtered by outgrown hedgerows, mature boundary vegetation and/or outbuildings. The nature of change and consequent effect would vary by property, dependent on their aspect, distance and relative exposure of view. Planting establishment along embankment slopes and connection of severed field margins would effectively integrate the Scheme with the small, irregular field pattern of the local landscape.												
V14-07	**3**	Scattered properties east of Tullywinny Road	Slightly elevated views west across well vegetated drumlin farmland.	Comments as per 28-03, although properties have more open prospects at a greater distance from the Proposed Scheme alignment.	**SA**			**4**					**4**				
V14-08	**3**	Isolated properties north of Lisginny Road	Low lying properties with views north across well vegetated drumlin farmland	The Proposed Scheme would pass to the north of the properties, varying between shallow cutting and extended embankment across lower lying ground between drumlin landforms. Views from properties would be broadly level with the route alignment, visible but heavily filtered by outgrown hedgerows, mature boundary vegetation and/or outbuildings. The nature of change and consequent effect would vary by aspect, distance and relative exposure of view. Planting establishment along embankment slopes and connection of severed field margins would effectively integrate the Scheme with the small, irregular field pattern of the local landscape.	**MA**			**1**	**1**					**1**	**1**		
V14-09	**3**	Properties at junction of Lisdoart Road with Lismore Road	Open views to the north-east across shallow and vegetated drumlin farmland	Views towards the Proposed Scheme would be heavily filtered and fragmented by vegetation and landform. Its distance would be such that the route would not have any perceived change on the nature of view.	**N**		**4**						**4**				
V14-10	**3**	Cluster of properties on Lisginny Road	Elevated views east from crest of hill across defined drumlin landscape with distinct field pattern	The Proposed Scheme would pass to the east of the properties, varying between shallow cutting and extended embankment across lower lying ground between drumlins. Views from properties would be broadly above the route alignment, visible across a wide field of view from the northernmost property in the group although more restricted in extent for the remainder. The road would be a noticeable element of what is currently a rural and appealing prospect over rural farmland. Planting establishment along embankment slopes and connection of severed field margins would integrate the Scheme with the small, irregular field pattern of the local landscape. However, due to the elevated aspect the road would remain an evident feature of local views.	**MA**				**3**	**1**					**4**		
V14-11	**3**	Isolated property on Lisginny Road	Low lying location with views across local farmed landscape with a distinct field pattern, contained by drumlin terrain.	The Proposed Scheme would pass in very close proximity to the north of the property, at a distance of 60m and level with the line of view. Views from the rear elevation would be heavily influenced by the carriageway and by traffic movement, evident across the entire field of view. Direct and acute views from side and front elevations respectively would register the overbridge construction to accommodate Lisginny Road. Visual screen barrier provision and dense hedgerow planting would provide a partial screen to traffic movement at Year of Opening which would soften as vegetation establishes. The proximity of the Scheme	**VLA**					**1**						**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				would however still be evident in the Design Year. Planting establishment across the overbridge embankment slopes at Lisginny Road would do much to soften the appearance of the overbridge locally, although the bridge construction itself would remain evident to side elevation views.													
V14-12	**3**	Farm property and meeting house south of Lisginny Road	Views across local farmland with a distinct field pattern, contained by drumlin terrain	The Proposed Scheme would pass between the properties in close proximity and in slight cutting, generally level with the meeting house and below the line of view of the farm dwelling. Views from both would be heavily influenced by the carriageway and by traffic movement, evident across the entire field of view. The farm would experience front elevation views directly along the line of the road where it approaches from the north, interrupted in the foreground of view by the overbridge construction to accommodate Lisginny Road. Loss of woodland cover to accommodate cutting slopes would be evident in prospects from the eastern side of the farm. Planting establishment to embankments at Lisginny Road and re-instatement planting within the cutting would do much to soften the appearance of the Scheme by the Design Year; however the bridge construction itself and traffic movement along the mainline would remain conspicuous aspects of view.	**VLA**					**1**	**1**						**2**	
V14-13	**3**	Isolated property off Old Chapel Road Spur	Property set close to hill form and recessed within local landform; oblique views to west.	Views from the property would be restricted to oblique/acute views along the line of the Proposed Scheme on embankment to the west, elsewhere views are curtailed by local modification of landform and wooded drumlin slopes. Planting establishment along the embankment slopes would filter traffic movement by the Design Year.	**LA**				**2**						**2**		
V14-14	**3**	Scattered properties off Old Chapel Road and Spur	Elevated views north through west from drumlin hill slopes and crests; defined and loosely enclosed drumlin farmland.	The Proposed Scheme would pass to the north of the properties on low embankment. Views from properties would be broadly above the route alignment, where the route alignment would be seen as a continuous element across a wide field of view. The overbridge construction to accommodate Old Chapel Road would be a prominent feature within the local context of views. Establishment of planting along embankment slopes to the main carriageway and throughout the overbridge setting would soften the appearance of the Scheme by the Design Year, although due to the elevated nature of view the road would remain a largely continuous and prominent aspect of view.	**LA**					**4**						**4**	
V14-15	**3**	Isolated properties on Old Chapel Road	Local prospects from within low drumlin farmland	The properties have restricted views, predominantly to the east and north which would register the re-alignment of Old Chapel Road via overbridge and limited parts of the mainline where it passes at grade to the north. Planting establishment on the overbridge embankments would integrate this element of the scheme locally by the Design Year, although the modification of landform and influence on the local context of view would remain evident to some degree.	**MA**				**2**						**2**		
V14-16	**3**	Single storey properties on Old Chapel Road	Locally enclosed and low lying views south and west across drumlin farmland, partially screened by property	The main change to the context of view from properties would be the re-alignment of Old Chapel Road and its associated overbridge	**MA**				**2**						**1**	**1**	

© Mouchel 2016

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
			boundary vegetation.	construction across the Proposed Scheme mainline. The raising of the side road profile would commence in the immediate line of view and the bridge construction itself would be partially visible at Year of Opening. The mainline carriageway would be mostly screened by cutting and earthworks to the overbridge, although some oblique prospects would be evident to the west. Vegetation establishment would soften the appearance of the overbridge by the Design Year.													
V14-17	**3**	Isolated property on Old Chapel Road	Interrupted views west across shallow drumlin farmland, loosely contained by landform	Views from the property would be curtailed by the proposed overbridge earthworks to the re-alignment of Old Chapel Road. Oblique prospects to the mainline carriageway would be experienced, in close proximity where it crosses the line of the existing Old Chapel Road before entering deep cutting. Vegetation establishment would soften the appearance of the overbridge by the Design Year and provide a partial screen to traffic movement; however the imposition of the road construction and associated structures would persist.	**LA**					**1**						**1**	
V14-18	**3**	Isolated property on Old Chapel Road	Open view west across open drumlin farmland	Views in the direction of the Proposed Scheme would be predominantly screened by the immediate drumlin landform west of the property; however earthworks for the re-alignment of Old Chapel Road would commence directly to the front of the dwelling which would alter, but not disrupt its immediate context of view. Vegetation establishment would soften the interface of the road re-alignment by the Design Year.	**LA**				**1**						**1**		
V14-19	**3**	Properties on A5 Tullyvar Road	Views south across line of A5 corridor to open, rolling drumlin farmland	The Proposed Scheme would pass approx 300-400m to the south of the properties, partially screened by variations in landform and by mature outgrown hedges. The re-alignment of Old Chapel Road would be evident initially as a mid-distant feature at Year of Opening. Planting establishment would effectively integrate the overbridge setting in time, such that the context of view from the properties would not dramatically change from the existing nature of view directly across the line of the existing A5.	**SA**			**3**						**3**

V15 – Aughnacloy

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
V15-01	**3**	Properties along A5 Tullyvar Road, Aughnacloy Golf Club	Low to slightly elevated views across local rolling drumlin farmland and line of A5 corridor	The Proposed Scheme would pass to the south of these properties, initially in moderate to deep cutting towards the proposed junction (J16) with the existing A5 Tullyvar Road north of Aughnacloy. Views for properties would be partially screened by landform and filtered by existing vegetation, although the junction and its approach would be visible in part. The south facing elevation of the club house at Aughnacloy Golf Club would have slightly more elevated prospects, although similarly screened predominantly by landform. Planting establishment across the junction area would integrate with the existing A5 corridor, containing the mainline between slip road embankments and reducing the influence of the overbridge construction and associated roundabouts.	**MA**			**4**						**4**			
V15-02	**3**	Isolated property west of A5 Tullyvar Road	Open views east across the immediate line of the A5 Tullyvar Road, towards rolling and vegetated drumlin farmland	The immediate context of property would be impacted upon by the creation of J16, with significant earthworks to the junction roundabouts falling within the direct field of view. The mainline would be largely screened by the slip road embankments and overbridge earthworks, such that the impact of traffic movement would be largely restricted to traffic leaving the dual carriageway and continuing traffic movement along the existing A5 Tullvar Road. Planting establishment on the embankment slopes to the junction would soften the immediate context of view, although the imposition created by the earthworks would remain as a fundamental change to the aspect of view from the property.	**VLA**						**1**					**1**	
V15-03	**3**	Properties on A5 Tullyvar Road, north of Aughnacloy	Low lying views east and along line of A5 corridor to vegetated drumlin farmland; Part obscured by outbuildings and boundary vegetation	Both properties would have oblique views towards re-aligned approach of the A5 Tullyvar Road to the proposed J16 roundabouts. The mainline would be briefly evident to the east of the A5 Tullyvar Road, along with side cutting through local drumlin landform. The direct context of view across the A5 Tullvar Road would remain as existing, with the re-alignment of Tullyvar Road becoming integrated as planting measures mature.	**MA**			**2**						**2**			
V15-04	**3**	Properties on Loughans Road	Low lying views north across local drumlin farmland	The properties would have partial views towards the proposed J16 setting and oblique views towards sidelong cutting east of the existing A5 Tullyvar Road. Local terrain and vegetation cover would limit prospects to resticted and intermittent views. Planting measures across the junction area would soften the context of the junction by the Design Year.	**MA**			**2**						**2**			
V15-05	**3**	Cluster of properties on A5 Tullyvar Road, north of Aughnacloy	Open views along line of A5 corridor to north and north east across rolling, vegetated drumlin farmland	The Proposed Scheme would pass approx 500m to the north of these properties, initially in moderate to deep cutting towards the proposed junction (J16) with the existing A5 Tullyvar Road north of Aughnacloy. Properties on slightly higher ground (to the south of the group) and 3 storey properties would have prospects towards the J16 setting and sidelong cutting through drumlin landform to the east of the A5 Tullyvar Road. Lower lying properties would have more restricted fields of view, consequently with less visual impact. Planting establishment at the junction would soften the context of the	**MA**			**11**	**20**					**31**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				junction setting from these aspects by the Design Year, although the perception of the sidelong cutting slopes would remain evident.													
V15-06	**3**	Property to south of cluster, east of the A5 Tullyvar Road and north of Aughnacloy	Open views south across local drumlin farmland from an elevated position on the edge of woodland.	The property has local views south across lower lying ground within which the proposed junction (J16) would be sited at the crossing of the existing A5 Tullyvar Road. The property would have direct views, partially filtered by vegetation, towards the junction roundabouts and slip roads to the mainline, while the mainline itself would be largely screened by these earthworks. Planting establishment would soften the context of the junction, although it would remain a prominent aspect of lower foreground views from the property.	**LA**					**1**							**1**	
V15-07	**3**	Isolated property on Loughans Road, north of Aughnacloy.	Open prospects to the south-west across local drumlin farmland.	The Proposed Scheme and the crossing of the existing A5 Tullyvar Road would be largely screened by local landform, such that views of the junction area itself would be limited to upper floors which may just perceive the southern roundabout location. There would be some local change to the context of view where Loughans Road is re-aligned, although this would be minor in nature.	**MA**			**1**						**1**			
V15-08	**3**	Isolated property north of Carnteel Road	Oblique views south and south-east across local farmland, heavily filtered by adjacent vegetation	The Proposed Scheme would pass immediately south of this isolated single storey property at grade, within a local recess in drumlin landform. Views from the property are predominantly east-west, such that the influence of the dual carriageway would be noticed obliquely in views from the property. Hedgerow establishment with hedgerow trees would form a partial screen to traffic movement along these oblique lines of view by the Design Year.	**LA**					**1**					**1**		
V15-09	**3**	Isolated property on Carnteel Road	View south across line of Carnteel Road to immediate local drumlin farmland	The Proposed Scheme would pass to the east of the property, screened largely by cutting and the re-alignment of Carnteel Road to pass over the dual carriageway. Views from the property would be affected by the earthwork requirements for the overbridge alignment, although with vegetation establishment the context of view would not dramatically alter.	**MA**			**1**					**1**				
V15-10	**3**	Properties on Rehaghy Road	Views east across shallow and enclosed drumlin farmland	The properties would have a very brief context of the road, passing between drumlin landforms approx 500m to the east. With planting establishment there would be no marked change to the context of view from these locations.	**SA**			**3**					**3**				
V15-11	**3**	Isolated property on Rehaghy Road	Elevated view east across local drumlin farmland, partially filtered by boundary vegetation	The situation of the property on a local rise would mean that its rear elevation would look directly across the route alignment, where it passes approx 100m to the east of the property on low embankment. The foreground field of view in this direction from the property would be largely influenced by the road, albeit below its immediate line of view. Embankment planting would ultimately provide a partial screen measure, although the presence of the route alignment would remain an evident aspect of the view.	**LA**					**1**							**1**	
V15-12	**3**	Isolated property south of Rehaghy Road	Filtered view west across low scrub and farmland	The Proposed Scheme would pass approx 250m west of the property on embankment and overbridge across Carnteel Road. The road and traffic movement would be evident, although partially screened by	**LA**					**1**					**1**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				mature planting in the vicinity. Planting to the road embankments would further soften the context of the road by the Design Year, although the presence of the dual carriageway within a restricted drumlin setting would remain evident.													
V15-13	**3**	Isolated property south of Rehaghy Road	Views west along line of Rehaghy Road, channelled by local tree planting	The property is low lying within drumlin farmland. The Proposed Scheme would be briefly visible where it crosses Carnteel Road on embankment, although with establishment of planting the context of view from the property would not markedly change.	**SA**			**1**					**1**				
V15-14	**3**	Properties alongside A28 Caledon Road	Slightly elevated views south east across line of A28 corridor and local farmland	The Proposed Scheme would cross the A28 Caledon Road, forming a new roundabout junction (J17) to the south-east of Aughnacloy. The properties would have direct views towards this junction roundabout and the single carriageway as it runs to the south. The presence of the junction would alter the view from the properties, although the fields of view currently take in the A28 corridor as their foreground setting. Notwithstanding this, the additional traffic movement and visible carriageway would constitute a permanent change to the context of view.	**LA**				**2**						**2**		
V15-15	**3**	Isolated property on A28 Caledon Road	View south west across line of A28 corridor towards well vegetated farmland	Similar observational comments to V15-14, although in this instance the orientation of the property and its proximity to the junction would suggest a higher degree of impact from the presence of the junction roundabout. Establish of planting would soften the presence of the junction setting by the Design Year.	**LA**					**1**					**1**		
V15-16	**3**	Scattered properties along A28 Caledon Road	Views north west generally along line of A28 corridor.	Similar observational comments to V15-14, although these properties are located at a greater distance from the proposed junction roundabout and consequently the change to views is less pronounced. The A28 corridor would remain as the primary foreground context to these properties.	**MA**			**4**						**4**			
V15-17	**3**	Properties alongside A28 Caledon Road, south of Aughnacloy	Open views south east from town edge across local farmland to wooded drumlin landform	The Proposed Scheme would pass south of these properties as a single carriageway, at a distance of approx 400m. Traffic movement along the road would be evident in a wide field of view. Planting establishment at the junction and on embankment slopes would soften its appearance by the Design Year.	**MA**			**1**	**8**					**1**	**8**		
V15-18	**3**	Properties south of A28 Caledon Road	Low lying views east/south east across local farmland towards wooded drumlin landform	The Proposed Scheme would pass south of these properties as a single carriageway, at a distance of approx 100m. Traffic movement along the road would be evident from the junction roundabout (J17) although traffic movement nearest the properties would be partially screened by targeted earth bunding. Planting establishment at the junction would soften its appearance by the Design Year.	**LA**					**2**					**2**		
V15-19	**3**	Properties along Lettice Street, south of Aughnacloy	Slightly elevated views east from properties along low crest, across local farmland	Comments as per V15-17 The properties have elevated views, focussing east across the Proposed Scheme where it passes in single carriageway from the proposed J17 roundabout with the A28 and approx 100-250m south of the properties. Planting establishment at the junction and along the embankment lengths would serve to integrate the road locally by the Design Year,	**LA**					**6**					**6**

Ref.	Phase	Description	Description of Outlook	Predicted Nature of Change & Effect	Constr Effects	Year 0 Effects						Year 15 Effects					
						SB	N	SA	MA	LA	VLA	SB	N	SA	MA	LA	VLA
				although it would remain a noticeable aspect of views.													
V15-20	**3**	Properties on A5 Lettice Street, south of Aughnacloy.	Local views along the line of the A5, within local drumlin terrain.	Views from the properties would not markedly change from existing, other than some awareness of minor works to the existing A5 to the immediate north.	**SA**		**2**						**2**				
V15-21	**3**	Cluster of properties west of A5 Lettice Street, Republic of Ireland	Open views north-east across the River Blackwater to local drumlin landform and across line of A5 corridor	A section of deep cutting through drumlin landform would be evident as a mid-distant aspect of views from these properties, although the curvature of the route alignment would not expose any significant "notch" in the local skyline from this aspect. The immediate context of the A5 corridor would not change.	**SA**			**5**						**5**			
		The Ulster Way	Enclosed, local views along the line of the trail	This link section of the Ulster Way would be interrupted by the line of the dual carriageway where it crosses on embankment. The route would be re-aligned and access improved. With planting establishment the scheme would not represent a significant change to the experience of using the route.	**MA**			*****						*****

Photomontage 1

New Buildings

Coordinates

54°57'48.75"N, 7°22'46.74"W

Landscape Character Zones

LCZ 1 - Lower Foyle Valley

Description:

This viewpoint is taken from Ballougry Road on the western margin of the River Foyle, looking across the river valley towards the settlement of New Buildings. The river corridor setting is defined as an “Area of High Scenic Value”, an area noted for its contribution to the setting and landscape of the City of Londonderry. The open context of view across the valley is broadly similar from New Buildings south to the village of Magheramason.

At Year of Opening the Proposed Scheme would run across the line of view from New Buildings following the River Foyle, mainly in shallow sidelong cutting through the open fields that separate the river from the town and the existing A5 corridor. Traffic would be a visible new element within the largely open views.

At Year 15 the Proposed Scheme would remain visible along the edge of the River Foyle from this location. Proposed mitigation planting within this section aims primarily to re-establish the field boundaries and maintain the open character along the river corridor, as such traffic would remain a visible element.

Photomontage 2

Grange Foyle looking towards Gortmonly Hill

Coordinates
54°54'16.19"N, 7°25'55.68"W

Landscape Character Zones
LCZ 1 - Lower Foyle Valley

Description:
The view is situated on Grange Foyle, a part of the wide and low lying floodplain of the River Foyle with open prospects toward the local rise of Gortmonly Hill. The hill has a discernable character, defining the eastern edge of the broad valley landscape associated with the River Foyle towards Londonderry. The existing A5 corridor follows the edge of the floodplain at the foot of Gortmonly Hill, through the small village of Bready.

At the Year of Opening the Proposed Scheme would be on embankment before passing in deep cutting through the westernmost edge of Gortmonly Hill, steepening the hill face and emerging to cross the existing A5 corridor and pass into the floodplain on low embankment further north. The Proposed Scheme would be elevated in relation to the existing A5 and would introduce more extensive views of traffic movement within the Grange Foyle area. The deposition area l to the south of the cutting would blend with the surrounding topography.There would be a loss of mature woodland and hedgerow which would initially expose the cutting at the year of opening.

At Year 15, planting establishment would conceal road embankments and much of the traffic movement from this context of view. Re-establishment of field boundaries would help integrate the scheme within the farmland setting.

Photomontage 3

Finn River

Coordinates

54°49'25.97"N, 7°29'43.30"W

Landscape Character Zones

LCZ 3 - Lifford Hills, LCZ 4 - Upper Foyle Valley

Description:

The viewpoint is located on the N15 road south west of Lifford, looking across the concealed Finn River and towards the residential margins of Strabane. The Finn River has a more intimate and localised character than that of the River Foyle, into which it flows.

The Proposed Scheme would run along the edge of the Finn River on high embankment and immediately in front of residential properties on the margin of Strabane before heading south and away from the line of view in moderately deep cutting.

At Year of Opening the Proposed Scheme would result in the loss of mature trees along Urney Road to accommodate the new roundabout, resulting in a break within the wooded background in this view. At year of opening the roundabout and traffic movements along the open embankments and junction would be a prominent feature.

At Year 15, planting establishment would soften the appearance of the road and integrate with the existing vegetation pattern alongside the Finn River. This would reduce the exposure of the road corridor in the context of the river valley, although it would remain an evident feature within the local landscape.

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The view takes in the context of Newtownstewart against its characteristic backdrop of Bessy Bell and the distinctive profile of Harry Avery's Castle above the fringes of the settlement.

At the Year of Opening the Proposed Scheme would pass behind Harry Avery's Castle in cutting and then above the town where it skirts the lower slopes of Bessy Bell. The road would appear as an intermittent and distant feature beyond Newtownstewart varying from embankment and cutting.

At Year 15 planting establishment on embankments would predominantly screen the available view of traffic movement. The established hedgerow along the Proposed Scheme boundary would tie in with the surrounding field pattern on the lower slopes of Bessy Bell.

Photomontage 5

Bessy Bell viewed from Carrigans Road

Coordinates

54°40'47.81"N, 7°20'48.45"W

Landscape Character Zones

LCZ 7 - Strule Valley and Bessy Bell

Description:

The viewpoint from Carrigans Road looks across the River Strule and the line of the existing A5 corridor, towards the east-facing hill slopes of Bessy Bell. The majority of this landscape, up to the line of Castletown Road (below the hill crest line within the view) falls within the boundary of the Sperrin AONB. Wind turbines, just outside of AONB boundary on the higher hill slopes are prominent features within the wider landscape, in particular from the south when approached from Omagh.

The Proposed Scheme would fall within the boundary of the AONB at this location, running in sidelong cutting and embankment above the line of the existing A5 and below Castletown Road. At Year of Opening the new road would be evident, with noticeable modifications to the landform. Traffic movement would initially be partially exposed to view along this section of the Proposed Scheme.

At Year 15 the establishment of planting along embankment lengths would filter views of traffic movement and integrate with the surrounding woodland and linear pattern of vegetation associated with the River Strule.

Moylagh

Coordinates

54°31'31.61"N, 7°13'3.54"W

Landscape Character Zones

LCZ 8 - Omagh Drumlin Farmlands, LCZ 9 - Brougher & Slievemore Ridge

Description:

Moylagh is situated at a point of transition from the farmed drumlin farmland south of Omagh to the higher, more pronounced terrain of the Brougher Ridge. The viewpoint is directed in a south-west direction from Meenmore Road, overlooking the properties within the settlement. There are distant prospects of Crocknatummoge Hill between the locally prominent hill rises that flank Moylagh to its immediate west.

The Proposed Scheme would cross the line of view just beyond the village setting, set on embankment and forming a grade separated junction with the B46. At Year of Opening, the junction setting and traffic movement would be exposed to view from properties.

At Year 15 the woodland planting on the embankment slopes would provide a dense vegetation screen to traffic movement, although the junction would remain and evident aspect of the context of view from the village.

Photomontage 7

Tycanny Hill

Coordinates

54°27'36.00"N, 7° 7'57.22"W

Landscape Character Zones

LCZ 9 - Brougher & Slievemore Ridge

Description:

The viewpoint from Newtownsaville Road looks north towards the crest of Tycanny Hill, on the Brougher Ridge. This is a remote landscape on a raised and prominent sandstone ridgeline, Tycanny being one of a number of prominent local hill crests that collectively define the ridgeline near Knockmany Forest.

At Year of Opening the Proposed Scheme would pass through the side slope of Tycanny Hill in deep cutting before emerging on embankment to run alongside Newtownsaville Road. This would represent a major modification of landform within the Brougher Ridge. Traffic movement would be evident in what is otherwise an intimate agricultural landscape.

At Year 15 the substantial block of woodland planting to the west of the carriageway would screen traffic movement where it emerges from cutting. The modification to landform would however remain an evident feature on the ridge line.

Errigal Keerogue viewed from Glenhoy Road

Coordinates

54°27'22.47"N, 7° 5'52.24"W

Landscape Character Zones

LCZ 9 - Brougher & Slievemore Ridge

Description:

The viewpoint from Glenhoy Road looks north towards the hill slope setting of Errigal Keerogue Church, a State Care Monument located on the south facing slopes of the Brougher Ridge, near Ballynasaggart. The remains of the church and graveyard have an open aspect with panoramic views across the drumlin farmlands to the south.

The Proposed Scheme would emerge from deep cutting to the west of the church, set low within the landscape and with Glenhoy Road diverted to pass over the dual carriageway on an over-bridge. There would be no obstruction to views from Errigal Keerogue but the setting would be influenced by the Proposed Scheme.

At Year 15 the restoration of field boundaries and extensive woodland/scrub planting would provide some measure of screening to views from Errigal Keerogue. The road however would remain a material influence on what is currently a tranquil landscape setting.
