

Portballintrae (Salmon Rock) – Bathing Water Profile

Salmon Rock beach, Portballintrae, County Antrim, Northern Ireland

	2021	2022	2023	2024
Portballintrae				

Key: ● Excellent ● Good ● Sufficient ● Poor

Bathing Water Profiles are designed to help the public make an informed choice before bathing, providing detailed information on the physical characteristics of each bathing water as well as assessing the pollution risk to each site. They are a requirement of The Quality of Bathing Water Regulations (Northern Ireland) 2008 and are reviewed in line with these regulations.

Current bathing water classification for Portballintrae (Salmon Rock) can be found at - [Bathing Water Classification](#)

There are currently no daily water quality predictions (forecasts) available at Portballintrae (Salmon Rock).

There is general advice not to bathe during or up to 48hrs after heavy or prolonged rainfall.

Description Portballintrae (Salmon Rock) bathing water is a sandy area with a rocky shoreline, approximately 200m in length and located adjacent to the village of Portballintrae. A car park, picnic area, toilets and a village hall are located on the eastern end of the bathing area. The beach and bathing water are accessed by steps at each end from the road and footpath above. Other amenities within the vicinity of the bathing water include a golf course, a small harbour and a large caravan park. Although no rivers flow onto or across the bathing water the River Bush is located close to the eastern end of the bathing water site, separated by a rocky outcrop. The immediate catchment is the small residential/urban area of Portballintrae village, with the wider catchment consisting of improved grassland and arable horticulture.

Site Details Local council area – Causeway Coast and Glens Borough Council

Year of designation – 2008

Water sampling location – Lat 55.22030, Long -6.54275

Potential Pollution and measures to reduce impact on site:

The potential sources of pollution have been split into three categories; wastewater (sewage) treatment works discharges, wastewater systems in urban areas and rural source pollution, including agriculture. DAERA Marine and Fisheries Division work with the Northern Ireland Environment Agency (NIEA) and other departments to identify and resolve sources of pollution.

Wastewater (sewage) treatment works discharges.

Wastewater from Portballintrae is pumped to the wastewater treatment works in Bushmills.

Wastewater systems in urban areas.

The urbanisation of Portballintrae village is a potential source of pollution, especially during or after periods of prolonged/heavy rainfall.

In the event of prolonged/heavy rainfall the wastewater system may become overwhelmed leading to an overflow/discharge of wastewater. **This is why there is general advice not to bathe during or up to 48 hours after prolonged/heavy rainfall.**

The collection and treatment of wastewater has the potential to cause pollution as all combined collection systems are designed to overflow in periods of extreme wet weather or following failure of the system. This prevents overflows into residential properties. Within the Portballintrae area there are combined sewer overflows (CSO) and wastewater pumping stations with associated emergency overflows, highlighted on Map 1.

There is also the potential for misconnections between the sewer system and surface drains, which may allow untreated wastewater to enter the water environment. Misconnections are not obvious, but when these become apparent NIEA pursues them as pollution incidents.

Rural source pollution – agriculture

The wider catchment area of Portballintrae bathing water has a significant amount of improved grassland, arable horticulture, and a small amount of open and dense dwarf heath. Areas within the catchment where agriculture is the dominant land use may be subject to inputs from chemical fertilisers and organic wastes. Prolonged periods of rainfall can cause surface runoff of these organic wastes, such as animal slurries, contributing to the bacteria content in the water environment.

Septic tanks also have the potential to cause localised pollution, but there is no evidence to suggest that this is impacting Portballintrae (Salmon Rock) bathing water.

Other potential sources of pollution.

- Dogs
- Horses
- Litter
- Fly tipping

Management measures:

The Water Environment (Water Framework Directive) Regulations (Northern Ireland) 2017, take an integrated approach to the protection, improvement and sustainable use of the water environment. River Basin Management Plans (RPMP) are produced which detail all of Northern Ireland's water quality objectives and a programme of measures to achieve these objectives. Within these 'Programme of Measures' in each River Basin Management Plan are a number of measures which relate directly to the protection of bathing waters.

Portballintrae (Salmon Rock) bathing water is located in the North Eastern River Basin District. You can find more information about the North Eastern River Basin Management Plan below:

[Draft 3rd cycle River Basin Management Plan for Northern Ireland 2021-2027](#)

Within the River Basin Management Plan programme of measures there are several schemes to address sources of pollution:

- Nutrients Action Programme (NAP) 2019-2022
- Knowledge Advisory Service (KAS)

- Environmental Farming Scheme (EFS)
- Soil Nutrient Health Scheme (SNHS)

Macro-algae, phytoplankton, and cyanobacteria (blue-green algae)

Portballintrae (Salmon Rock) bathing water is not at risk of proliferation of macro-algae, phytoplankton, or cyanobacteria (blue-green algae).

What should I do if I see a pollution incident?

If you see a water pollution incident, you should immediately contact NIEA through the **24 hr** Emergency Water Pollution Hotline:

Phone: 0800 807060

When pollution is reported or found to be affecting the water quality of a bathing water, an immediate investigation is instigated. All possible sources of pollution are checked and the bathing water is monitored until the effects of the incident have passed. During this time, bathing waters may be temporarily closed (by local authority or controlling body) until the water quality has improved and levels of bacteria are within mandatory standards.
